any one that hides behind a mic and screams and every thing is just plane dumb
>They all have home made antennas
yes i do have home made antennas. ooya forgo you do not no how to a dipole
let alown a yagi or a quad
>that suck and have them way to close to each
no i do not one home made ground plane on a 30 foot tower and a 90 foot
swl antenna with one end mounted 25 foot up on the same tower
and a 80/40 meter antenna held up by two 20 foot towers
>other and have to use
>antenna tuners to get the swr down.
no antenna tuners hear good match on 80 & 40 with a fan dipole and 10 meters
with the ground plane and 2 meters with a diskcone antenna
>They use junk equipment and don't
i use antequated equipment like a hw-101 and hallicrafters ht-18 and sx-96
>know anything about electronics. They are all just want-a-be CBers. Good
and i repaired all of them when i got them for some reson or nother
(ie) bad resisters or cap,s or other stuff
i alredy am a cb,r got but that junk got old quickly
amps watts amps watts amps watts that is all you duddes think about any more
is it some kind of mental deficiency or what

antenna antenna antenna

maco super laser 500 or something to that efect

get a dual polarity beam of some tipe

vertical for local moble stations and horizontal for
bases that have only got a horizontal beam

if you do not get a dual polarity beam then
just mout the beam verticaly polarized

and pleas no amps!!!!!!!!!

Why would anyone want to run AM on a FT101? It makes a lousy AM rig, even
with the AM filter. It IS a pretty good SSB rig.

    Oh it wasn't that bad a rig on AM in its day. I ran a few of
those and it was about the only ham rig that was worth a crap on AM.
Obviously there were the defficiencies in them but once you got 'em
aligned and modified slightly they were good sounding radios on TX.
    Somewhere I still have some new kits that replaced the meter
circuit and provided some gain in the IF. I may even have some AM
and CW filters as well as some xtals for these rigs.

    I wouldn't put FM so low on the list. In fact I would tend to
list it before AM. But then that's just me.

If you hear me interferring with you, let me know! You most
likely won't hear me because New York and the Cheasapeake
Bay are in the "skipped zone" to each other. I make
a couple of quick contacts, maybe 5 or 10 minutes, and I've
got my skip fix taken care of. You remind me of the guy that
asks for a radio check every rime you turn it on. No, you
remind me of the local butthead that asks for a radio check
every 15 minutes. He has an Echo-Max 2000 set to max and always
has that stupid beep on. Wants to know if he's sounding good <:

You tell him "yes" just to shut him up.

Hey Kaputski, "Yes!, I've had my comms interrupted by skip."
Depending on the circumstance, I'll talk to the interrupter,
give 'em grief, or whatever. Heres a tissue, stop whining.

I found a nifty program that can be used to determine the beam heading from point A to point B as well as the distance in land miles. It's called Quibla Calc. It is primarily designed to assist followers of the Muslim faith in determining the proper direction to face during thier daily prayers. However, it has a general use section that accepts the point A and point B input. Given that information in

lattitude, longitude format it will return the distance
between the points, the bearing from A to B and the magnetic
declination at point A.

As I don't follow the Muslim faith I'd prefer a similar
program that left out the Quibla references, but given the
lack of such a program (that I've been able to find) geared
toward the radio hobby I guess it'll do so I thought perhaps
some of you folks on this newsgroup might find it useful.
Here's the link: http://www.ummah.net/software/qibla/

Send it in to Crystal Electronics and they will fix it and bring it back to factory specs. Have it back to you in 7 days or so and it will cost about $40.

We have ours done every six months so as to be as accurate as possible for our customers. We use them on our work benches.

Good luck. Crystal is really easy to work with.

No there is not a trucker channel. The FCC has not allotted a channel for just truckers. The most commonly used channel for all is 19. Then most companies use other channels for loading and dispatching out on. Check your local area or the area you are traveling in by turning the channel selector until you hear them talking. Then take your chances. Regardless of who you are listening too you may not enjoy the conversation.

Good luck in finding the trucker channel in your local area.

Check both of your antennas for the bandwidth on them. You might be surprised.

If you are on a big rig and a 102 whip isn't practical then try a Nug-a-tron.
Or a lookalike. Just keep in mind maintainability.

This antenna has impressed me over and over on installing them on vehicles.
More a norm than not to be very broad banded.

It depends on how the antenna likes the vehicle. Hope that helps.

The cobra 75wxst is a good radio for its intended purpose. Sometimes I don't understand why everyone has to flame a certain radio. All radio's are good if it is useful for the intended purpose. Ok.

The 75WXST has a recieve that may be choppy if you turn the squelch so you don't hear all the trash. To hear the entire conversation you just turn the squelch back.

Its not a big full featured rf gain/mic gain ssb tuned up go get em talk all over the country radio and never will be. But it is a small little radio that will give you wx reports in you local area. Stay out of the way. Can be mounted anywhere in the vehicle. Put a good antenna on it, tuned to the vehicle and voila, you are using a cb radio. This radio should please all the people out there wishing that cb's would stay at 4 watts.

It is also useful in keeping up with the traffic conditions.

When a customer walks in and asks what is the best radio on the market. I ask them what they want the radio to do. Every radio is good. The antenna makes up 80% of the operation. Put a good antenna on the vehicle, make sure it is tuned and go get you a radio. It doesn't even have to be an expensive radio. It will work. If it suits your needs will be the next question. Since there is not enough information in your post to determine this then a fair evaluation of your needs can not be met.

Fair enough. Hope you have fun in the CB World.

PS I have very happy customers with the 75WXST and have had a few that weren't. That is why I ask them right off what they want their radio to do for them. It is not a DX Radio as a norm.

Hi Everyone,

Recently some buffoons in this newsgroup have become disillusioned with their inability to logically defend their illegal and inconsiderate operations in and around the CB band, and thus have found it necessary to resort to name-calling, personal attacks, profanity, threats, and other forms of childish behavior in order to compensate for their own inadequacy.

The most recent example of this kind of behavior came from someone who posted a message with the subject line that said something to the effect that I am a troll. Well, okay...if that's what you want, that's what you get. I always have figured that if I've got the name, I may as well have the game...so now, I'll show you mental midgets what trolling is all about. Get a load of what I am about to e-mail to all five FCC Commissioners:

October 30, 1999
From: John D. Kasupski, KC2FNG
To: Mr. William Kennard, Chairman
    Ms. Susan Ness, Commissioner
    Mr. Harold Furchtgott-Roth, Commissioner
    Mr. Michael Powell, Commissioner
    Ms. Gloria Tristani, Commissioner

Subject: Citizens Radio Service

Ladies And Gentlemen:

I am writing to you for the purpose of expressing some concerns that I have relative to the present state, as well as the future, of the Citizens Radio Service. It is my belief that the CB band is long overdue for some attention from the Compliance and Information Bureau, and also, I believe that some portions of Part 95 need to be re-examined in light of what has happened to the band in the years since the requirement for a station license in order to operate on this band was abolished.

The regulations governing operation in the Citizens Radio Service (which I shall refer to hereafter as the CRS in the interest of brevity) have basically remained unchanged for a number of years. The expansion of the band from 23 to 40 channels, and the elimination of station licensing in the CRS, took place over a decade ago. These have been the last meaningful changes to Part 95, and many of us who operate in this band have come to feel that the band has been basically ignored by the government ever since. Certainly, it is generally agreed in the radio hobby community that FCC efforts with respect to enforcing Part 95 have been virtually nonexistent for over a decade except where numerous complaints were received over a prolonged period of time relative to an individual miscreant, and/or where interference with other radio services was involved.

I am sorry to say that this has contributed to the fact that there is now widespread disregard for Part 95 evident on the part of all too many CB operators. The use of illegal RF power amplifiers on this band is rampant. Deliberate interference by some operators with legitimate communications being conducted by other operators is altogether too common here. The band is in danger of being overrun by inconsiderate, foul-mouthed buffoons with no respect for other users of this part of the RF spectrum, no respect for Part 95, and no respect for FCC enforcement efforts.

In fact, some might say that the band has already been overrun by the outlaws. Personally, I do not believe this to be the case. I believe that the majority of CB operators nationwide would like to see courteous and legal operation...but certainly, the number of inconsiderate operators and the incidence rate of illegal operation in the CRS leaves much to be desired.

I first got started in radio as a shortwave listener back in 1966 at the age of eight. At that time I was able to monitor the CB band using a general coverage receiver. I became active on the CB band at 18, at a time during which there was still general adherence to Part 95 on the part of the vast majority of users in the CRS. As I think back to those days, I recall hearing very, very few operators who did not use their FCC-issued station callsigns. I recall hearing very, very few operators who were not using type-accepted equipment. Rare indeed was the individual who ran excessive power levels or deliberately interfered with other stations, and nobody used the kind of language on the air back then that I regularly hear on the air today in the CRS. If they had, I'm quite sure my parents would have forbidden me to listen to them. As it turned out, my association with SWL and CB at a relatively early age led to my eventually becoming a licensed amateur radio operator this September. I now hold a Technician class license with callsign KC2FNG...but my purpose here is to address the CRS, so please allow me if you will to check my ham ticket at the door (so to speak) for the most part. Although I am a licensed amateur, I am for the most part concerned with the CB band on which I got my start in two-way radio communications.

I, along with many countless other responsible users of the CB band, would like to see things return to that state of affairs. We would like to see the foul-mouthed, inconsiderate operators gone from our band. We would like to see those who run illegal and grossly excessive RF power levels removed from the CRS and the interference that they cause to other stations removed along with them. Unfortunately, the hands of responsible, legal CB operators are tied due to the fact that there is a lack of technical expertise for self-policing activities as is common in the Amateur Radio Service - not to mention the lack of anyone on the CB bands with any standing such as ARRL's Official Observers - and also, unfortunately, there is the perception held by both legal operators and by those who ignore Part 95 that the FCC does not care about the CB band. Thus, short of the undesirable option of vigilantism, there is little that decent, law-abiding CB operators can do other than to either put up with the violators, or leave the CB band entirely.

This situation need not be permitted to continue. The CRS can still be a useful, viable alternative to the GMRS or amateur radio service for persons desiring inexpensive access to short to medium range communications for use by the general public. In order to accomplish this, I believe that two things need to be done.

First of all, the CIB must take a more active approach to Part 95 enforcement than has been evident in the past. It has been noted in various discussion groups on the Internet, as well as in recent articles in radio hobby magazines such as Popular Communications, Monitoring Times, CQ, and QST, that FCC enforcement efforts relative to the Amateur Radio Service have been stepped up considerably of late. However, the wheels still seem to turn somewhat slowly in this regard.

In one widely publicized case, the Tampa District Office of CIB issued a Notice of Apparent Liability for Forfeiture to an individual in Jupiter, Florida charging one William Flippo with numerous violations, including willful operation of an unlicensed station on the frequency 28.375 in the 10-meter amateur band, willful or malicious interference with an on-going amateur radio communication, and failure to make his radio equipment available for inspection by an authorized FCC representative.

While I was happy to learn of the FCC's action in this matter, I was also dismayed to see that this NAL was issued in July of 1999, when amateur radio operators in the Jupiter, Florida area had been filing written complaints with the CIB since November of 1997.

It is my hope that the new enforcement bureau that began in October of 1999 will enable the FCC to deal with such violators on a more timely basis, but the fact remains that if it took over a year and a half for the FCC to deal firmly with a violator who was interfering with communications on the amateur bands, what chance do we who operate on the CB band have of obtaining any support from FCC relative to enforcing Part 95 and helping to clean up the CB band?

I am an individual who understands the value of regulations governing the use of that public resource that the RF spectrum in fact is. I have always operated my CB station in accordance with Part 95, and I always operate my ham station in accordance with Part 97. William Flippo is alleged to have intentionally interfered with 2-meter repeaters in the ARS, intentionally interfered in the 10-meter band,

and is alleged to have made false 9-1-1 calls as well as refusing to permit an authorized FCC representative to inspect his station after that FCC representative used radio direction finding techniques to determine that the interference was coming from Flippo's residence.

As a CB operator, I feel that those who behave as Flippo is alleged to have behaved, give CB operators a figurative black eye relative to our public image. As an amateur radio operator, I find that the ARS suffers the same black eye because most people have no idea of the differences between ham radio and CB radio. One is perceived by the public to be pretty much equal to the other. The public reads about individuals who behave as Flippo is alleged to have behaved, and gets the mistaken impression that this is how all Cb operators and hams behave. Thus my reputation is damaged, however undeservedly, by this perception on the part of the public. The same holds true for all other amateurs and CB operators who operate their stations within the parameters specified by the applicable FCC regulations.

I am sure there are many in both the ham and CB radio services who would love to try to repair some of the damage to our reputations that is done by behavior on the part of a minority of individuals who act as Mr. Flippo is alleged to have acted. We would like to help clean up the Cb band so that it can again be a radio service that is useful for the purposes for which it is supposed to be used under Part 95. I therefore pose the following question to the Commission, on my own behalf and on behalf of other CB operators who operate our stations legally and considerately: How can those of us who operate legally under Part 95 help to rid our band? When confronted with the behavior of the buffoons who began invading the CB band back in 1980's with their illegal linear amplifiers and noise making devices, what are we as responsible, legal CB operators to do about it, as far as the Commission is concerned, and particularly as far as the enforcement bureau is concerned?

I intend to write an article for one of the radio hobby magazines pertaining to this subject in the near future, and would like to be able to present the Commission's "take" on this issue to the radio hobby community through that article. Any advice that I can pass along to the law-abiding users of the CRS, will certainly be appreciated both by me and by those users of the CB band who would like to see the band cleaned up, as I do.

A couple of recent issues of Popular Communications magazine featured articles on what appears to be a somewhat well organized group of flagrant violators claiming to run mobile units with blatantly illegal amounts of RF power output - we're talking thousands of watts, in a band where 12 watts PEP is the absolute maximum allowable by Part 95. This group can be easily found on the Internet - just read the Usenet newsgroup rec.radio.cb and you will find hordes of violators blatantly buying and selling illegal power amplifiers for use on the CB band, describing how to modify CB radios for illegal operation on unauthorized frequencies, advocating that others totally ignore Part 95, and even advocating that people operate in the ham bands without a license.

They even have a site on the world wide web: http://www.bigradios.com is a site which includes AVI format digitized movies of what these outlaws call their "shootout vehicles" - which basically are vans and sport utility vehicles equipped with multiple high-capacity alternators, which power gargantuan RF amplifiers. The site includes a picture page with links to digitized photographs of these vehicles. At the top of this page appears the following (quoted directly from http://www.bigradios.com/shadow/):

Definition of the SuperBowl -- Channel 6:

If there are 10,000 CB'er's on the SuperBowl...
then out of 10,000 only 1,000 can be heard some of the times...
and out of 10,000 only 100 can be heard most of the times....
and out of that 10,000 there are probably only 10 of the most well known
guys that talk on the SuperBowl and can almost talk skip when they want.....
This is a great example why the bowl is not for the weak!

In my opinion, ladies and gentlemen, this is also a great example of why the CIB needs to start taking a more active role in enforcing Part 95 - particularly with respect to taking action against groups and individuals who flaunt their complete disregard for Part 95 in this manner. Here is a group of outlaw Cbers who apparently takes pride in the fact that their actions have render a frequency on the CB band completely unusable to all but ten of the 10,000 CBers nationwide who might wish to exercise their privilege to use that frequency!

One page on this web site is a "marketplace" that includes a page devoted entirely to buying and selling illegal RF power amplifiers for use on the CB band.

Another page on this web site, http://www.bigradios.com/tollfree/calendar.htm has a "Calendar Of Events" listing dates and locations where these violators gather to show off their illegal equipment as well as buy and sell it. The page includes the following thinly veiled threat which I again quote directly from the web page:

"What you are about to see is classified information. Tell everyone but tell no-one.
You know what I mean? It could be detrimental to the person causing this
information to fall into the wrong hands. We saw what you did and we know who
you are."

The behavior of people like this is detrimental to the CRS. Anyone who has been active on the CB band for as long as I have been, has seen what they have done to the band. Anyone who wants to know who they are, can find them in the Usenet newsgroup rec.radio.cb where at least two of these miscreants has the audacity to regularly post messages bearing header information that would upon some investigation reveal the Internet Service Provider whose facilities were used to post those messages.

I am not suggesting that the Commission involve itself with policing what is posted by these individuals on the Internet or with the content of their web site, I merely include this information to demonstrate to the Commission the complete disregard that these individuals display for the FCC and Part 95, not to mention the rights of legitimate, law-abiding users of the CB band. Since the web site is kind enough to provide a calendar of events detailing where and when these violators can be found, it seems to me that a timely visit to their "event" from an FCC enforcement team would allow the confiscation of this equipment, would allow for a lot of fines to be levied for some pretty serious violations of Part 95, and the money collected in fines could be used to fund further efforts to enforce FCC regulations. After all, by flaunting their complete disregard for the regulations under which they are supposed to operate on the CB band, these people are daring the FCC to do anything about. They are asking for it...so why doesn't the CIB give it to them? Once these people get together and start keying up their gargantuan amplifiers, I believe the use of a $30 field strength meter would provide all the probable cause anyone would need to have reasonable suspicion that a violation is being committed. The fines that could be collected would total a lot more than $30, and confiscated equipment that was then destroyed in accordance with the usual FCC procedures would no longer be available to contribute to the chaos that is caused on the band by the operation of such equipment.

Furthermore, such an enforcement action would undoubtedly be widely publicized, especially in light of the fact that this particular group was just featured in two articles in Popular Communications magazine. This would serve notice in a very public manner to the outlaw operators on and near the CB band that the Commission is getting serious about Part 95 enforcement again. A great opportunity exists for CIB to score a major financial and public relations windfall here...a fact that I hope will not be lost on you ladies and gentlemen of the Commission when you read this. I fully hope that you will investigate by viewing the web site I have just brought to your attention, and have a look at the rec.radio.cb newsgroup for yourselves and see how blatantly these people publicize their disregard for the regulations, and direct CIB to take appropriate action so that the legitimate, law-abiding users of the CRS can see that the FCC has not abandoned the band after all.

The second step that I believe needs to be taken in order to restore the CRS to a respectable status in the eyes of both the public at large and of the radio hobby community, is to amend Part 95 so as to make the job of the enforcement bureau easier. Admittedly, the enforcement task that the CIB is faced with on the CB band is monumental, due to the large number of users on this band, the fact that there is no licensing data on this band thus making it more difficult to identify violators, and the sheer number of violators involved as well as the apparent impunity with which they have ignored Part 95 - and continue to do so.

The enforcement task is not made any easier at all by the fact that even stations running legal power at 27 Mhz can find their signals being propagated far beyond the 250 Km legal distance limit for communicating between two stations in the CRS. The fact that the only legal modes for use in this band are AM and SSB emissions doesn't help things any either since the undesired propagation effects are magnified by the use of AM and SSB, as opposed to FM which would be subject to the "capture effect" and allow legal operators to hear the local stations they want to communicate with, without interference from weaker signals propagated by band conditions from beyond the 250 Km limit. In addition to the above, there is the fact that thousands, and perhaps hundreds of thousands of stations in the CRS are crammed onto exactly 40 channels. This has led all too many operators to unfortunately seek quieter territory in the RF spectrum by operating illegally in what has come to be known as the "free band" - i.e., frequencies adjacent to the 40 channels authorized in the CRS.

I have not, do not, and never will operate on unauthorized frequencies. However, I can somewhat sympathize with the otherwise considerate and responsible operators who seem to find it necessary to operate in the "free band" in order to escape the chaos that now exist on the 40 legal channels, and which are the result of overpowered stations, deliberate interference by some stations with other stations, inconsiderate operation by foul-mouthed individuals, etc. As a no-code amateur licensee who thus does not have HF privileges, I can also sympathize with the "freebanders" argument that they are operating in the only place in which they can operate on HF without knowledge of Morse Code in order to obtain an amateur radio license that grants HF operating privileges.

Although I do not condone the out-of-band operation practiced by the so-called "Freebanders" and in fact I object to their operations due to the fact that all too often they operate in the 10 meter ham band where I eventually hope to gain operating privileges legally by upgrading my ham license in the future, I must in all fairness point out that aside from the fact that they are operating on unauthorized frequencies, the operators who I hear on the so-called "freeband" when I listen there on my general-coverage receivers do seem to be a lot more considerate and responsible with respect to their other operating practices and procedures than do many of the operators who confine their operation to the 40 channels authorized by Part 95.

From this, I am led to believe that the majority of the operators to be found in the "freeband" regions would seem to be those operators who are the most technically adept and thus able to modify their equipment to operate on frequencies it was not designed to operate on. I think it is somewhat a shame that those people are driven to violate Part 95 because the behavior of those they wish to leave behind on the "legal 40" has become so commonplace that they feel they must take such as drastic step as operating on unauthorized frequencies in order to escape the more blatant practitioners of CB barbarianism. While I would much rather see these people do a little bit of studying and get their ham tickets instead, the fact remains that many of these freebanders wouldn't be where they are if it weren't for the rampant abuses going on in the legal CB band.

The question, then, as I see it, is one of how to deal with the multiple problems that have arisen on and around the CB band as the result of the conditions which exist there. I have given the matter some thought and have come up what I think is a novel idea that will solve two problems at once. It would solve the problem with the CB band, and it would solve the problem with the argument in the ARS with respect to whether or not we should have no-code HF licensing. Please permit me, then, to propose the following to the Commission:

I believe that the current CRS should be reorganized as part of the Amateur Radio Service, with station licensing as a prerequisite for operation after January 1, 2002. This would give current CB operators two years with which to comply with the new licensing requirements. After January 1, 2002, the possession of transmitting equipment without a station license would be grounds for confiscation of the equipment as well as the imposition of fines and/or imprisonment for violators. Equipment confiscated from violators would be auctioned for sale to licensed users who are authorized to legally possess and use that equipment, and the proceeds from those auctions, along with the money collected from violators in fines levied by the Commission, would be used to fund enforcement of the FCC regulations.

The new CRS that would then exist after January 1, 2002 would be a different class of license within the Amateur Radio Service. This would of course necessitate a reorganization of the amateur radio licensing structure at that time...but since I understand the Commission is considering reorganizing the ARS licensing structure anyway, I don't see this as a problem. The specifics of the ARS reorganization would of course require input from other amateurs, but for what it is worth, my own ideas with respect to this issue would be to have the following four license classes:

1. Amateur Novice - This would be an entry-level, no-code license class permitting operation on HF on the 27 Mhz band only. Authorized emissions would be AM, SSB, FM, CW, and PSK-31 data transmissions. The band for this class of license would be created by combining the current 40 CB channels with additional radio spectrum adjacent to the current CRS allocations.

Legitimate users of licensed services in those frequency ranges have largely abandoned those frequencies already anyway due to interference from unauthorized operations there, so it should not displace very many, if any, users from this part of the RF spectrum if the Commission creates an 11 meter amateur radio band encompassing, say, 26.00 to 27.80 Mhz. Sub bands for AM/SSB/CW, FM, and PSK-31 operations would be specified - personally, I would advocate having FM and data modes sharing spectrum above or below the current 40 channels to minimize interference from those modes with existing radios now available for CB operation...perhaps adding ten more AM/SSB channels below or above the current CB band, and authorizing FM below that range of frequencies, and CW and PSK-31 emissions above that range. I leave it up to the Commission, however, to determine the most efficient method of allocating the available RF spectrum into sub bands for the permitted emissions type, perhaps with input from ARRL, and/or from current users of this portion of the RF spectrum other than myself.

The maximum allowable power levels here would be QRP levels of 5 watts or less, to remain in accordance with the ITU treaties that require knowledge of Morse Code for operation on HF otherwise. We would retain the low-power status of 27 MHz but expand it, authorize more emissions modes, and bring it under the auspices of the Amateur Radio Service where it would be subject to volunteer examination as a license requirement, and thus also bring it within the jurisdiction of ARRL Official Observers, which would make effective enforcement possible.

Licensing requirements here would consist of an extremely elementary written test only. Applicants would need to know the difference between AM/SSB/CW/FM/PSK-31 emissions and demonstrate a knowledge of the FCC regulations governing the 27 MHz band on which they would be receiving operating privileges. CW, as well as tone-modulated CW in the FM mode, would be permitted since it would enable holders of this class of license to practice sending and receiving the code for those who wish to upgrade their licenses and thus gain more operating privileges.

2. Amateur Technician - This would add the privileges of the current Technician license to those of the new license class outlined above. Holders of the Technician class license would haver the privileges of the new Amateur Novice (27 MHz), plus full amateur privileges above 50 MHz. This, too, would be a no-code license as is currently the case with this license class.

3. Amateur General - This would be comparable to the current General class amateur radio license. It would require a slow-speed code test - perhaps 5 WPM - in addition to the more difficult written examination for the General Class license, and would combine 27 MHz privileges, full amateur privileges above 50 MHz, and the additional HF privileges currently enjoyed by Novice class licensees.

4. Amateur Extra - This would be the same as the current Amateur Extra license class, and would allow all amateur privileges on all amateur bands.

I believe that this proposal would be a good compromise for the no-code HF access debate as well as allowing us to clean up the CB band. It allows for funding of enforcement efforts through allocation of fines and other monies collected as a result of enforcement, and it would allow the 27 Mhz band to be brought under the watchful eyes and ears of ARRL Official Observers, thus making enforcement less of a chore for the CIB which must currently try to go it alone in that regard. And finally, by making the 27 Mhz band a part of the Amateur Radio Service, users of this portion of the RF spectrum would be able to learn from other hams and discover how to best make use of their operating privileges legally, using improved antenna systems and more technically sound equipment to increase range rather than resorting to higher power.

While I am certain that several details in the above will require modification - particularly with respect to the actual allocations and band plan within the new 27 Mhz band and the new requirements for the other amateur license classes - I think that the basic idea bears examining to see whether or not it, or some variation of it, cannot be used to remove a thorn from the side of both the Commission, and those of us on the CB band who would like to see it again made possible for us to use the 27 Mhz band to its full potential.

Admittedly, this is an ambitious proposal calling for widespread changes in the current 27 Mhz band. Implementing such changes will not be easy. There are, however, probably no easy answers to the problems currently existing on this band, and thus, I feel that an ambitious initiative is required to return this portion of the RF spectrum to a condition that will be a positive value to its users. I feel that my ideas will benefit the current users of both the CB band and the amateur radio service, in that it will not only address abuses of the 27 Mhz band in the current CRS, but also provide a clear path for the responsible, courteous CB operators who will remain on 27 Mhz one it is cleaned up to have an opportunity to advance their standing in the newly organized Amateur Radio Service, and thus will benefit the amateur community as well.

In the short term, implementation of this or a similar idea for the CB band may be problematic, but in the long run, I feel it would benefit the entire radio hobby as well as removing a major thorn from the Commission's side. Therefore, I respectfully ask and request that the Commission give serious consideration to implementing some form of this proposal for the good of radio in the United State as well as the rest of the world.

Sincerely,
John D. Kasupski
KC2FNG

I'm e-mailing myself a copy of this message, which will thus be run through the spell-checking utility in my news reader before it goes out. The copy that appears in my mailbox will be free of all spelling errors, just like the one that appears above, and then I will forward it to all five FCC Commissioners.

Once that is done, I will follow up on any replies I receive from the Commission. I will NOT reply to any posts in this newsgroup relative to this communication, and since my POP3 client automatically trashes anything sent to me in e-mail that is unsolicited, don't waste your time e-mailing me either because your e-mail goes right to the trash folder without my ever even being aware that you sent it. If you aren't on my mailing list, I don't get your mail...period. The ultimate in spam control, the ultimate in flame control, the ultimate in privacy. That comes from knowing how to set up effective filters in your POP3 client. If you receive spam and flame messages in your e-mail account, learn to use filters. :-)

I will say this...I am not the least bit intimidated by the threat on the bigradios.com web site. You morons don't know what the phrase "detrimental to your health" even means until you show up here with intent to try to back up your ridiculous threat and have to stand where I can get you in my sights. TRY to make good on your silly threat if you think you are man enough.

By the way, anybody notice one less potty-mouth in this NG lately? That's because a couple of his profanity-laced messages got forwarded to abuse@mindspring.com and so apparently one potty-mouth less has access tho this group from his ISP. So the rest of you sewer-mouths take your best shot. I'll be more than happy to forward your filth to your ISMs as well, I just won't lower myself to responding to your garbage in this NG.

Mess with the best, end up like the rest.

73 and good DX'ing,
John D. Kasupski

>and he has a grudge agenst the cb,rs that ran him off

With all due thanks for your support of my position on the issues, OM, nobody ran me off the CB band and nobody will. I still operate on 11 meters - a fully legal operation, just like I have for the past 24 years - and I will continue to do so. I'm not the type to type to give in to a bunch of morons. I'd rather stick around and give 'em hell.

>if it is so simple then go and git you amateur extra
>and forget about the dumb old cb band as you say

Yep...it's always simple to these jerks. That's why most of them have never sat for a VE session.

>The splatter boxes mumble
>The splatter boxes hiss
>The splatter boxes crackle
>The splatter boxes torment
>The splatter boxes bleed
>And above all
>The splatter boxes splatter
>Day after day they clutter the band
>And destroy the usefulness of it

And that's just the operators! You should hear what their sorry excuses for radio equipment does to the bands. :-)

73 and good DX'ing,
John D. Kasupski

>
> I believe that the current CRS should be reorganized as part of the
> Amateur Radio Service, with station licensing as a prerequisite for
> operation after January 1, 2002. This would give current CB operators
> two years with which to comply with the new licensing requirements.
> After January 1, 2002, the possession of transmitting equipment
> without a station license would be grounds for confiscation of the
> equipment as well as the imposition of fines and/or imprisonment for
> violators. Equipment confiscated from violators would be auctioned for
> sale to licensed users who are authorized to legally possess and use
> that equipment, and the proceeds from those auctions, along with the
> money collected from violators in fines levied by the Commission,
> would be used to fund enforcement of the FCC regulations.
>
> The new CRS that would then exist after January 1, 2002 would be a
> different class of license within the Amateur Radio Service. This
> would of course necessitate a reorganization of the amateur radio

> licensing structure at that time...but since I understand the Commission is considering reorganizing the ARS licensing structure anyway, I don't see this as a problem. The specifics of the ARS reorganization would of course require input from other amateurs, but for what it is worth, my own ideas with respect to this issue would be to have the following four license classes:
>
> 1. Amateur Novice - This would be an entry-level, no-code license class permitting operation on HF on the 27 Mhz band only. Authorized emissions would be AM, SSB, FM, CW, and PSK-31 data transmissions. The band for this class of license would be created by combining the current 40 CB channels with additional radio spectrum adjacent to the current CRS allocations.
>
> Legitimate users of licensed services in those frequency ranges have largely abandoned those frequencies already anyway due to interference from unauthorized operations there, so it should not displace very many, if any, users from this part of the RF spectrum if the Commission creates an 11 meter amateur radio band encompassing, say, 26.00 to 27.80 Mhz. Sub bands for AM/SSB/CW, FM, and PSK-31 operations would be specified - personally, I would advocate having FM and data modes sharing spectrum above or below the current 40 channels to minimize interference from those modes with existing radios now available for CB operation...perhaps adding ten more AM/SSB channels below or above the current CB band, and authorizing FM below that range of frequencies, and CW and PSK-31 emissions above that range. I leave it up to the Commission, however, to determine the most efficient method of allocating the available RF spectrum into sub bands for the permitted emissions type, perhaps with input from ARRL, and/or from current users of this portion of the RF spectrum other than myself.
>
> The maximum allowable power levels here would be QRP levels of 5 watts or less, to remain in accordance with the ITU treaties that require knowledge of Morse Code for operation on HF otherwise. We would retain the low-power status of 27 MHz but expand it, authorize more emissions modes, and bring it under the auspices of the Amateur Radio Service where it would be subject to volunteer examination as a license requirement, and thus also bring it within the jurisdiction of ARRL Official Observers, which would make effective enforcement possible.
>
> Licensing requirements here would consist of an extremely elementary written test only. Applicants would need to know the difference between AM/SSB/CW/FM/PSK-31 emissions and demonstrate a knowledge of the FCC regulations governing the 27 MHz band on which they would be receiving operating privileges. CW, as well as tone-modulated CW in the FM mode, would be permitted since it would enable holders of this class of license to practice sending and receiving the code for those who wish to upgrade their licenses and thus gain more operating privileges.
>
> 2. Amateur Technician - This would add the privileges of the current Technician license to those of the new license class outlined above.

> Holders of the Technician class license would haver the privileges of
> the new Amateur Novice (27 MHz), plus full amateur privileges above 50
> MHz. This, too, would be a no-code license as is currently the case
> with this license class.
>
> 3. Amateur General - This would be comparable to the current General
> class amateur radio license. It would require a slow-speed code test -
> perhaps 5 WPM - in addition to the more difficult written examination
> for the General Class license, and would combine 27 MHz privileges,
> full amateur privileges above 50 MHz, and the additional HF privileges
> currently enjoyed by Novice class licensees.
>
> 4. Amateur Extra - This would be the same as the current Amateur Extra
> license class, and would allow all amateur privileges on all amateur
> bands.
>
> I believe that this proposal would be a good compromise for the
> no-code HF access debate as well as allowing us to clean up the CB
> band. It allows for funding of enforcement efforts through allocation
> of fines and other monies collected as a result of enforcement, and it
> would allow the 27 Mhz band to be brought under the watchful eyes and
> ears of ARRL Official Observers, thus making enforcement less of a
> chore for the CIB which must currently try to go it alone in that
> regard. And finally, by making the 27 Mhz band a part of the Amateur
> Radio Service, users of this portion of the RF spectrum would be able
> to learn from other hams and discover how to best make use of their
> operating privileges legally, using improved antenna systems and more
> technically sound equipment to increase range rather than resorting to
> higher power.
>
> While I am certain that several details in the above will require
> modification - particularly with respect to the actual allocations and
> band plan within the new 27 Mhz band and the new requirements for the
> other amateur license classes - I think that the basic idea bears
> examining to see whether or not it, or some variation of it, cannot be
> used to remove a thorn from the side of both the Commission, and those
> of us on the CB band who would like to see it again made possible for
> us to use the 27 Mhz band to its full potential.
>
> Admittedly, this is an ambitious proposal calling for widespread
> changes in the current 27 Mhz band. Implementing such changes will not
> be easy. There are, however, probably no easy answers to the problems
> currently existing on this band, and thus, I feel that an ambitious
> initiative is required to return this portion of the RF spectrum to a
> condition that will be a positive value to its users. I feel that my
> ideas will benefit the current users of both the CB band and the
> amateur radio service, in that it will not only address abuses of the
> 27 Mhz band in the current CRS, but also provide a clear path for the

Yeah, sure they are. That's why the USCG Communications Area Master
Station Atlantic in Portsmouth, Virginia comes in here at 20 dB over
S-9 24 hours a day, seven days a week on at least four different HF
frequencies. I think my 11-year old daughter knows more about HF
propagation than you seem to know.

>got my skip fix taken care of. You remind me of the guy that

Well, number one, I don't ever have to ask for a radio check to see
how my radio sounds, I can just listen to my own signal using any one
of the three HF receivers I have here in my shack.

Number two, I do not now, nor have I ever owned or used an echo box microphone, furthermore, I refuse to even key up to talk to anybody that does.

>Hey Kaputski, "Yes!, I've had my comms interrupted by skip."

Very good, Snot...er, I mean, Scott...

>Depending on the circumstance, I'll talk to the interrupter,

...thereby notching yet another Part 95 violation...

>give 'em grief, or whatever. Heres a tissue, stop whining.

Nah, you keep it, you'll need something to wipe off your leg with next time you're at bigradios.com looking at all the pictures of illegal stuff you wish you could afford on what you make flipping burgers at the local Mickey D's.

73 and good DX'ing,
John D. Kasupski

```

>Ladies And Gentlemen:
>
>I am writing to you for the purpose of expressing some concerns that I have relative to the present state, as well as the future, of the Citizens Radio Service. It is my belief that the CB band is long overdue for some attention from the Compliance and Information Bureau, and also, I believe that some portions of Part 95 need to be re-examined in light of what has happened to the band in the years since the requirement for a station license in order to operate on this band was abolished.
>
>The regulations governing operation in the Citizens Radio Service (which I shall refer to hereafter as the CRS in the interest of brevity) have basically remained unchanged for a number of years. The expansion of the band from 23 to 40 channels, and the elimination of station licensing in the CRS, took place over a decade ago. These have been the last meaningful changes to Part 95, and many of us who operate in this band have come to feel that the band has been basically ignored by the government ever since. Certainly, it is generally agreed in the radio hobby community that FCC efforts with respect to enforcing Part 95 have been virtually nonexistent for over a decade except where numerous complaints were received over a prolonged period of time relative to an individual miscreant, and/or where interference with other radio services was involved.
>
>I am sorry to say that this has contributed to the fact that there is now widespread disregard for Part 95 evident on the part of all too many CB operators. The use of illegal RF power amplifiers on this band is rampant. Deliberate interference by some operators with legitimate communications being conducted by other operators is altogether too common here. The band is in danger of being overrun by inconsiderate, foul-mouthed buffoons with no respect for other users of this part of the RF spectrum, no respect for Part 95, and no respect for FCC enforcement efforts.
>
>In fact, some might say that the band has already been overrun by the outlaws. Personally, I do not believe this to be the case. I believe that the majority of CB operators nationwide would like to see courteous and legal operation...but certainly, the number of inconsiderate operators and the incidence rate of illegal operation in the CRS leaves much to be desired.
>
>I first got started in radio as a shortwave listener back in 1966 at the age of eight. At that time I was able to monitor the CB band using a general coverage receiver. I became active on the CB band at 18, at a time during which there was still general adherence to Part 95 on the part of the vast majority of users in the CRS. As I think back to those days, I recall hearing very, very few operators who did not use their FCC-issued station callsigns. I recall hearing very, very few operators who were not using type-accepted equipment. Rare indeed was the individual who ran excessive power levels or deliberately interfered with other stations, and nobody used the kind of language on the air back then that I regularly hear on the air today in the

>CRS. If they had, I'm quite sure my parents would have forbidden me to
>listen to them. As it turned out, my association with SWL and CB at a
>relatively early age led to my eventually becoming a licensed amateur
>radio operator this September. I now hold a Technician class license
>with callsign KC2FNG...but my purpose here is to address the CRS, so
>please allow me if you will to check my ham ticket at the door (so to
>speak) for the most part. Although I am a licensed amateur, I am for
>the most part concerned with the CB band on which I got my start in
>two-way radio communications.
>
>I, along with many countless other responsible users of the CB band,
>would like to see things return to that state of affairs. We would
>like to see the foul-mouthed, inconsiderate operators gone from our
>band. We would like to see those who run illegal and grossly excessive
>RF power levels removed from the CRS and the interference that they
>cause to other stations removed along with them. Unfortunately, the
>hands of responsible, legal CB operators are tied due to the fact that
>there is a lack of technical expertise for self-policing activities as
>is common in the Amateur Radio Service - not to mention the lack of
>anyone on the CB bands with any standing such as ARRL's Official
>Observers - and also, unfortunately, there is the perception held by
>both legal operators and by those who ignore Part 95 that the FCC does
>not care about the CB band. Thus, short of the undesirable option of
>vigilantism, there is little that decent, law-abiding CB operators can
>do other than to either put up with the violators, or leave the CB
>band entirely.
>
>This situation need not be permitted to continue. The CRS can still be
>a useful, viable alternative to the GMRS or amateur radio service for
>persons desiring inexpensive access to short to medium range
>communications for use by the general public. In order to accomplish
>this, I believe that two things need to be done.
>
>First of all, the CIB must take a more active approach to Part 95
>enforcement than has been evident in the past. It has been noted in
>various discussion groups on the Internet, as well as in recent
>articles in radio hobby magazines such as Popular Communications,

Does it make good sense to write, post, mail and publish a request to the FCC officials regarding illegal activities of misuse of radio frequencies, ask them to monitor this news group, then spew the following quoted statement for all to see, including the people (FCC) you want to persuade of your honesty and sincerity........

>

And I think Hollingsworth is a moron, but I don't let that effect how I feel about ham radio. And you should not either. Why let something as minor as this keep you out of the action?

> I may be looking at this wrong but if
> I were to talk out-of-band today and,

You're not looking at it wrong. If that is all you did, and you corrected the problem after being advised, then nobody should complain. And I seriously doubt anyone would. Shoot, I make mistakes everyday on the radio (if you use it enough, you're going to make mistakes), and so far nobody has complained.

But there is a big difference between an honest mistake and an intentional effort to cause problems on the radio. I have never heard anybody ever file a complaint on the first and I think people should report the latter.

I don't have those types of problems where I live (near Seattle). Around here people on the radio get along very nicely. But, even though I have not seen it, I'm not for a moment going to say that it does not happen.

Amateur radio does not live in a vaccuum, Miles. Many of the problems that exist in our society exist in Amateur radio. And we're certainly not all angels. Both good and bad people use Amateur radio also.

But there are also many of us who value Amateur radio highly, and are prepared to fight to keep it under control. Understand that we're not doing this out of some higher sense of morality (at least I'm not). Many of us just realise that Amateur radio has a great value to us and we want to keep that (in other words, we're doing this out of pure self-interest, or selfishness if you prefer).

That self-interest keeps us from ignoring the rules. That self-interest keeps us on the watch for trouble-makers. That self-interest keeps us fanatically pushing ham radio. It's all self-interest. And I don't think there is anything wrong with that (many people push the things that interest them).

I like CB also. It has value to me. The people I talk to on the CB radio have value to me. And that is why I am sad to see CB go down like it has over the last few years. Perhaps I can't stop the actions of the masses on CB, but I can control my own actions. And I can try to keep it out of ham radio before it becomes the norn there.

Can I stop it all? Can the others who feel like I do stop it all? Certainly not (which is why self-policing is not perfect). But we can resist. And we can stop some. And that alone may be enough over time.

By the way, Miles. I'm not that far on the other "side of the street." I've been involved with CB since the mid-eighties (KBEO-0299). And I do not intend to give up my CB radio just because I also have a ham radio.

Nobody is following you around, Jeff. You seem to forget that many ham operators also own CB radios as well. Because of that, we have just as much right to be here (this newsgroup) as you do.

But, since we're also ham radio operators, we also occassionally bring that up also (especially if it relates to something that was said in this newsgroup).

John well spoken from a no-code tech! I am sure the commision will head your warnings Just because you said so. I'll bet the FCC has filters in there e-mail program as well and I am sure yours will get trounced too. i THINK THE WHOLE NEWSGROUP IN gENREAL SHOULD E-MAIL THE SAME FCC COMMISIONERS with Some of Johns recent posts and his agenda of attacking certain p[eople from the newsgroup especially his threat of violence where he obviously is refering to use of a gun in his statement of " where I can get you in my sights. TRY to make good on your silly threat if you think you are man enough" Getting you in his crosshairs so to speak, Hopefully they will then blow him off for being a jackass with to much time on his hands. Anyone with access to www.qrz.com can get Johns address by putting in his call sign in then you can mail him your feelings since he will not answer you thru e-mail, this may be your only attempt to reach out to him or perhaps you can stop over for coffee if you live in his area and talk to him, but watch out he carrys a big gun so look for the laser dot on your chest while walking to the door, he may mistake your dual band ht for a weapon

```

> I am sorry to say that this has contributed to the fact that there is now widespread disregard for Part 95 evident on the part of all too many CB operators. The use of illegal RF power amplifiers on this band is rampant. Deliberate interference by some operators with legitimate communications being conducted by other operators is altogether too common here. The band is in danger of being overrun by inconsiderate, foul-mouthed buffoons with no respect for other users of this part of the RF spectrum, no respect for Part 95, and no respect for FCC enforcement efforts.
>
> In fact, some might say that the band has already been overrun by the outlaws. Personally, I do not believe this to be the case. I believe that the majority of CB operators nationwide would like to see courteous and legal operation...but certainly, the number of inconsiderate operators and the incidence rate of illegal operation in the CRS leaves much to be desired.
>
> I first got started in radio as a shortwave listener back in 1966 at the age of eight. At that time I was able to monitor the CB band using a general coverage receiver. I became active on the CB band at 18, at a time during which there was still general adherence to Part 95 on the part of the vast majority of users in the CRS. As I think back to those days, I recall hearing very, very few operators who did not use their FCC-issued station callsigns. I recall hearing very, very few operators who were not using type-accepted equipment. Rare indeed was the individual who ran excessive power levels or deliberately interfered with other stations, and nobody used the kind of language on the air back then that I regularly hear on the air today in the CRS. If they had, I'm quite sure my parents would have forbidden me to listen to them. As it turned out, my association with SWL and CB at a relatively early age led to my eventually becoming a licensed amateur radio operator this September. I now hold a Technician class license with callsign KC2FNG...but my purpose here is to address the CRS, so please allow me if you will to check my ham ticket at the door (so to speak) for the most part. Although I am a licensed amateur, I am for the most part concerned with the CB band on which I got my start in two-way radio communications.
>
> I, along with many countless other responsible users of the CB band, would like to see things return to that state of affairs. We would like to see the foul-mouthed, inconsiderate operators gone from our band. We would like to see those who run illegal and grossly excessive RF power levels removed from the CRS and the interference that they cause to other stations removed along with them. Unfortunately, the hands of responsible, legal CB operators are tied due to the fact that there is a lack of technical expertise for self-policing activities as is common in the Amateur Radio Service - not to mention the lack of anyone on the CB bands with any standing such as ARRL's Official Observers - and also, unfortunately, there is the perception held by both legal operators and by those who ignore Part 95 that the FCC does not care about the CB band. Thus, short of the undesirable option of vigilantism, there is little that decent, law-abiding CB operators can do other than to either put up with the violators, or leave the CB

> band entirely.
>
> This situation need not be permitted to continue. The CRS can still be
> a useful, viable alternative to the GMRS or amateur radio service for
> persons desiring inexpensive access to short to medium range
> communications for use by the general public. In order to accomplish
> this, I believe that two things need to be done.
>
> First of all, the CIB must take a more active approach to Part 95
> enforcement than has been evident in the past. It has been noted in
> various discussion groups on the Internet, as well as in recent
> articles in radio hobby magazines such as Popular Communications,
> Monitoring Times, CQ, and QST, that FCC enforcement efforts relative
> to the Amateur Radio Service have been stepped up considerably of
> late. However, the wheels still seem to turn somewhat slowly in this
> regard.
>
> In one widely publicized case, the Tampa District Office of CIB issued
> a Notice of Apparent Liability for Forfeiture to an individual in
> Jupiter, Florida charging one William Flippo with numerous violations,
> including willful operation of an unlicensed station on the frequency
> 28.375 in the 10-meter amateur band, willful or malicious interference
> with an on-going amateur radio communication, and failure to make his
> radio equipment available for inspection by an authorized FCC
> representative.
>
> While I was happy to learn of the FCC's action in this matter, I was
> also dismayed to see that this NAL was issued in July of 1999, when
> amateur radio operators in the Jupiter, Florida area had been filing
> written complaints with the CIB since November of 1997.
>
> It is my hope that the new enforcement bureau that began in October of
> 1999 will enable the FCC to deal with such violators on a more timely
> basis, but the fact remains that if it took over a year and a half for
> the FCC to deal firmly with a violator who was interfering with
> communications on the amateur bands, what chance do we who operate on
> the CB band have of obtaining any support from FCC relative to
> enforcing Part 95 and helping to clean up the CB band?
>
> I am an individual who understands the value of regulations governing
> the use of that public resource that the RF spectrum in fact is. I
> have always operated my CB station in accordance with Part 95, and I
> always operate my ham station in accordance with Part 97. William
> Flippo is alleged to have intentionally interfered with 2-meter
> repeaters in the ARS, intentionally interfered in the 10-meter band,
> and is alleged to have made false 9-1-1 calls as well as refusing to
> permit an authorized FCC representative to inspect his station after
> that FCC representative used radio direction finding techniques to
> determine that the interference was coming from Flippo's residence.
>
> As a CB operator, I feel that those who behave as Flippo is alleged to
> have behaved, give CB operators a figurative black eye relative to our
> public image. As an amateur radio operator, I find that the ARS

> suffers the same black eye because most people have no idea of the
> differences between ham radio and CB radio. One is perceived by the
> public to be pretty much equal to the other. The public reads about
> individuals who behave as Flippo is alleged to have behaved, and gets
> the mistaken impression that this is how all Cb operators and hams
> behave. Thus my reputation is damaged, however undeservedly, by this
> perception on the part of the public. The same holds true for all
> other amateurs and CB operators who operate their stations within the
> parameters specified by the applicable FCC regulations.
>
> I am sure there are many in both the ham and CB radio services who
> would love to try to repair some of the damage to our reputations that
> is done by behavior on the part of a minority of individuals who act
> as Mr. Flippo is alleged to have acted. We would like to help clean up
> the Cb band so that it can again be a radio service that is useful for
> the purposes for which it is supposed to be used under Part 95. I
> therefore pose the following question to the Commission, on my own
> behalf and on behalf of other CB operators who operate our stations
> legally and considerately: How can those of us who operate legally
> under Part 95 help to rid our band? When confronted with the behavior
> of the buffoons who began invading the CB band back in 1980's with
> their illegal linear amplifiers and noise making devices, what are we
> as responsible, legal CB operators to do about it, as far as the
> Commission is concerned, and particularly as far as the enforcement
> bureau is concerned?
>
> I intend to write an article for one of the radio hobby magazines
> pertaining to this subject in the near future, and would like to be
> able to present the Commission's "take" on this issue to the radio
> hobby community through that article. Any advice that I can pass along
> to the law-abiding users of the CRS, will certainly be appreciated
> both by me and by those users of the CB band who would like to see the
> band cleaned up, as I do.
>
> A couple of recent issues of Popular Communications magazine featured
> articles on what appears to be a somewhat well organized group of
> flagrant violators claiming to run mobile units with blatantly illegal
> amounts of RF power output - we're talking thousands of watts, in a
> band where 12 watts PEP is the absolute maximum allowable by Part 95.
> This group can be easily found on the Internet - just read the Usenet
> newsgroup rec.radio.cb and you will find hordes of violators blatantly
> buying and selling illegal power amplifiers for use on the CB band,
> describing how to modify CB radios for illegal operation on
> unauthorized frequencies, advocating that others totally ignore Part
> 95, and even advocating that people operate in the ham bands without a
> license.
>
> They even have a site on the world wide web: http://www.bigradios.com
> is a site which includes AVI format digitized movies of what these
> outlaws call their "shootout vehicles" - which basically are vans and
> sport utility vehicles equipped with multiple high-capacity
> alternators, which power gargantuan RF amplifiers. The site includes a
> picture page with links to digitized photographs of these vehicles. At

> the top of this page appears the following (quoted directly from
> http://www.bigradios.com/shadow/):
>
> Definition of the SuperBowl -- Channel 6:
>
> If there are 10,000 CB'er's on the SuperBowl...
> then out of 10,000 only 1,000 can be heard some of the times...
> and out of 10,000 only 100 can be heard most of the times....
> and out of that 10,000 there are probably only 10 of the most well known
> guys that talk on the SuperBowl and can almost talk skip when they want.....
> This is a great example why the bowl is not for the weak!
>
>
> In my opinion, ladies and gentlemen, this is also a great example of
> why the CIB needs to start taking a more active role in enforcing Part
> 95 - particularly with respect to taking action against groups and
> individuals who flaunt their complete disregard for Part 95 in this
> manner. Here is a group of outlaw Cbers who apparently takes pride in
> the fact that their actions have render a frequency on the CB band
> completely unusable to all but ten of the 10,000 CBers nationwide who
> might wish to exercise their privilege to use that frequency!
>
> One page on this web site is a "marketplace" that includes a page
> devoted entirely to buying and selling illegal RF power amplifiers for
> use on the CB band.
>
> Another page on this web site,
> http://www.bigradios.com/tollfree/calendar.htm has a "Calendar Of
> Events" listing dates and locations where these violators gather to
> show off their illegal equipment as well as buy and sell it. The page
> includes the following thinly veiled threat which I again quote
> directly from the web page:
>
> "What you are about to see is classified information. Tell everyone
> but tell no-one.
> You know what I mean? It could be detrimental to the person causing this
> information to fall into the wrong hands. We saw what you did and we know who
> you are."
>
> The behavior of people like this is detrimental to the CRS. Anyone who
> has been active on the CB band for as long as I have been, has seen
> what they have done to the band. Anyone who wants to know who they
> are, can find them in the Usenet newsgroup rec.radio.cb where at least
> two of these miscreants has the audacity to regularly post messages
> bearing header information that would upon some investigation reveal
> the Internet Service Provider whose facilities were used to post those

> messages.
>
> I am not suggesting that the Commission involve itself with policing
> what is posted by these individuals on the Internet or with the
> content of their web site, I merely include this information to
> demonstrate to the Commission the complete disregard that these
> individuals display for the FCC and Part 95, not to mention the rights
> of legitimate, law-abiding users of the CB band. Since the web site is
> kind enough to provide a calendar of events detailing where and when
> these violators can be found, it seems to me that a timely visit to
> their "event" from an FCC enforcement team would allow the
> confiscation of this equipment, would allow for a lot of fines to be
> levied for some pretty serious violations of Part 95, and the money
> collected in fines could be used to fund further efforts to enforce
> FCC regulations. After all, by flaunting their complete disregard for
> the regulations under which they are supposed to operate on the CB
> band, these people are daring the FCC to do anything about. They are
> asking for it...so why doesn't the CIB give it to them? Once these
> people get together and start keying up their gargantuan amplifiers, I
> believe the use of a $30 field strength meter would provide all the
> probable cause anyone would need to have reasonable suspicion that a
> violation is being committed. The fines that could be collected would
> total a lot more than $30, and confiscated equipment that was then
> destroyed in accordance with the usual FCC procedures would no longer
> be available to contribute to the chaos that is caused on the band by
> the operation of such equipment.
>
> Furthermore, such an enforcement action would undoubtedly be widely
> publicized, especially in light of the fact that this particular group
> was just featured in two articles in Popular Communications magazine.
> This would serve notice in a very public manner to the outlaw
> operators on and near the CB band that the Commission is getting
> serious about Part 95 enforcement again. A great opportunity exists
> for CIB to score a major financial and public relations windfall
> here...a fact that I hope will not be lost on you ladies and gentlemen
> of the Commission when you read this. I fully hope that you will
> investigate by viewing the web site I have just brought to your
> attention, and have a look at the rec.radio.cb newsgroup for
> yourselves and see how blatantly these people publicize their
> disregard for the regulations, and direct CIB to take appropriate
> action so that the legitimate, law-abiding users of the CRS can see
> that the FCC has not abandoned the band after all.
>
> The second step that I believe needs to be taken in order to restore
> the CRS to a respectable status in the eyes of both the public at
> large and of the radio hobby community, is to amend Part 95 so as to
> make the job of the enforcement bureau easier. Admittedly, the
> enforcement task that the CIB is faced with on the CB band is
> monumental, due to the large number of users on this band, the fact
> that there is no licensing data on this band thus making it more
> difficult to identify violators, and the sheer number of violators
> involved as well as the apparent impunity with which they have ignored
> Part 95 - and continue to do so.

>
> The enforcement task is not made any easier at all by the fact that
> even stations running legal power at 27 Mhz can find their signals
> being propagated far beyond the 250 Km legal distance limit for
> communicating between two stations in the CRS. The fact that the only
> legal modes for use in this band are AM and SSB emissions doesn't help
> things any either since the undesired propagation effects are
> magnified by the use of AM and SSB, as opposed to FM which would be
> subject to the "capture effect" and allow legal operators to hear the
> local stations they want to communicate with, without interference
> from weaker signals propagated by band conditions from beyond the 250
> Km limit. In addition to the above, there is the fact that thousands,
> and perhaps hundreds of thousands of stations in the CRS are crammed
> onto exactly 40 channels. This has led all too many operators to
> unfortunately seek quieter territory in the RF spectrum by operating
> illegally in what has come to be known as the "free band" - i.e.,
> frequencies adjacent to the 40 channels authorized in the CRS.
>
> I have not, do not, and never will operate on unauthorized
> frequencies. However, I can somewhat sympathize with the otherwise
> considerate and responsible operators who seem to find it necessary to
> operate in the "free band" in order to escape the chaos that now exist
> on the 40 legal channels, and which are the result of overpowered
> stations, deliberate interference by some stations with other
> stations, inconsiderate operation by foul-mouthed individuals, etc. As
> a no-code amateur licensee who thus does not have HF privileges, I can
> also sympathize with the "freebanders" argument that they are
> operating in the only place in which they can operate on HF without
> knowledge of Morse Code in order to obtain an amateur radio license
> that grants HF operating privileges.
>
> Although I do not condone the out-of-band operation practiced by the
> so-called "Freebanders" and in fact I object to their operations due
> to the fact that all too often they operate in the 10 meter ham band
> where I eventually hope to gain operating privileges legally by
> upgrading my ham license in the future, I must in all fairness point
> out that aside from the fact that they are operating on unauthorized
> frequencies, the operators who I hear on the so-called "freeband" when
> I listen there on my general-coverage receivers do seem to be a lot
> more considerate and responsible with respect to their other operating
> practices and procedures than do many of the operators who confine
> their operation to the 40 channels authorized by Part 95.
>
> From this, I am led to believe that the majority of the operators to
> be found in the "freeband" regions would seem to be those operators
> who are the most technically adept and thus able to modify their
> equipment to operate on frequencies it was not designed to operate on.
> I think it is somewhat a shame that those people are driven to violate
> Part 95 because the behavior of those they wish to leave behind on the
> "legal 40" has become so commonplace that they feel they must take
> such as drastic step as operating on unauthorized frequencies in order
> to escape the more blatant practitioners of CB barbarianism. While I
> would much rather see these people do a little bit of studying and get

> their ham tickets instead, the fact remains that many of these
> freebanders wouldn't be where they are if it weren't for the rampant
> abuses going on in the legal CB band.
>
> The question, then, as I see it, is one of how to deal with the
> multiple problems that have arisen on and around the CB band as the
> result of the conditions which exist there. I have given the matter
> some thought and have come up what I think is a novel idea that will
> solve two problems at once. It would solve the problem with the CB
> band, and it would solve the problem with the argument in the ARS with
> respect to whether or not we should have no-code HF licensing. Please
> permit me, then, to propose the following to the Commission:
>
> I believe that the current CRS should be reorganized as part of the
> Amateur Radio Service, with station licensing as a prerequisite for
> operation after January 1, 2002. This would give current CB operators
> two years with which to comply with the new licensing requirements.
> After January 1, 2002, the possession of transmitting equipment
> without a station license would be grounds for confiscation of the
> equipment as well as the imposition of fines and/or imprisonment for
> violators. Equipment confiscated from violators would be auctioned for
> sale to licensed users who are authorized to legally possess and use
> that equipment, and the proceeds from those auctions, along with the
> money collected from violators in fines levied by the Commission,
> would be used to fund enforcement of the FCC regulations.
>
> The new CRS that would then exist after January 1, 2002 would be a
> different class of license within the Amateur Radio Service. This
> would of course necessitate a reorganization of the amateur radio
> licensing structure at that time...but since I understand the
> Commission is considering reorganizing the ARS licensing structure
> anyway, I don't see this as a problem. The specifics of the ARS
> reorganization would of course require input from other amateurs, but
> for what it is worth, my own ideas with respect to this issue would be
> to have the following four license classes:
>
> 1. Amateur Novice - This would be an entry-level, no-code license
> class permitting operation on HF on the 27 Mhz band only. Authorized
> emissions would be AM, SSB, FM, CW, and PSK-31 data transmissions. The
> band for this class of license would be created by combining the
> current 40 CB channels with additional radio spectrum adjacent to the
> current CRS allocations.
>
> Legitimate users of licensed services in those frequency ranges have
> largely abandoned those frequencies already anyway due to interference
> from unauthorized operations there, so it should not displace very
> many, if any, users from this part of the RF spectrum if the
> Commission creates an 11 meter amateur radio band encompassing, say,
> 26.00 to 27.80 Mhz. Sub bands for AM/SSB/CW, FM, and PSK-31 operations
> would be specified - personally, I would advocate having FM and data
> modes sharing spectrum above or below the current 40 channels to
> minimize interference from those modes with existing radios now
> available for CB operation...perhaps adding ten more AM/SSB channels

> below or above the current CB band, and authorizing FM below that
> range of frequencies, and CW and PSK-31 emissions above that range. I
> leave it up to the Commission, however, to determine the most
> efficient method of allocating the available RF spectrum into sub
> bands for the permitted emissions type, perhaps with input from ARRL,
> and/or from current users of this portion of the RF spectrum other
> than myself.
>
> The maximum allowable power levels here would be QRP levels of 5 watts
> or less, to remain in accordance with the ITU treaties that require
> knowledge of Morse Code for operation on HF otherwise. We would retain
> the low-power status of 27 MHz but expand it, authorize more emissions
> modes, and bring it under the auspices of the Amateur Radio Service
> where it would be subject to volunteer examination as a license
> requirement, and thus also bring it within the jurisdiction of ARRL
> Official Observers, which would make effective enforcement possible.
>
> Licensing requirements here would consist of an extremely elementary
> written test only. Applicants would need to know the difference
> between AM/SSB/CW/FM/PSK-31 emissions and demonstrate a knowledge of
> the FCC regulations governing the 27 MHz band on which they would be
> receiving operating privileges. CW, as well as tone-modulated CW in
> the FM mode, would be permitted since it would enable holders of this
> class of license to practice sending and receiving the code for those
> who wish to upgrade their licenses and thus gain more operating
> privileges.
>
> 2. Amateur Technician - This would add the privileges of the current
> Technician license to those of the new license class outlined above.
> Holders of the Technician class license would haver the privileges of
> the new Amateur Novice (27 MHz), plus full amateur privileges above 50
> MHz. This, too, would be a no-code license as is currently the case
> with this license class.
>
> 3. Amateur General - This would be comparable to the current General
> class amateur radio license. It would require a slow-speed code test -
> perhaps 5 WPM - in addition to the more difficult written examination
> for the General Class license, and would combine 27 MHz privileges,
> full amateur privileges above 50 MHz, and the additional HF privileges
> currently enjoyed by Novice class licensees.
>
> 4. Amateur Extra - This would be the same as the current Amateur Extra
> license class, and would allow all amateur privileges on all amateur
> bands.
>
> I believe that this proposal would be a good compromise for the
> no-code HF access debate as well as allowing us to clean up the CB
> band. It allows for funding of enforcement efforts through allocation
> of fines and other monies collected as a result of enforcement, and it
> would allow the 27 Mhz band to be brought under the watchful eyes and
> ears of ARRL Official Observers, thus making enforcement less of a
> chore for the CIB which must currently try to go it alone in that
> regard. And finally, by making the 27 Mhz band a part of the Amateur

> Radio Service, users of this portion of the RF spectrum would be able
> to learn from other hams and discover how to best make use of their
> operating privileges legally, using improved antenna systems and more
> technically sound equipment to increase range rather than resorting to
> higher power.
>
> While I am certain that several details in the above will require

I have seven (7) Panasonic WV-1414 CCTV cameras with lenses all in
fine working condition that I would like to trade for some type of ham
gear. A picture of one of the cameras can be seen at:

http://www.usol.com/~tje/pancam1.jpg

They require 24 VAC power. I can also provide power transformers for
them if needed and the right deal comes along. These cameras are used
but in great operating condition. Please email me with what you have
to trade. PLEASE NO converted commercial vhf/uhf stuff.

Amen!! Tell it like it is, John. Could not have said it better myself.

It's a shame that people who advocate anything positive in this society are dismissed with silly phrases like that above. No wonder this country is going to the pits.

hmm...

"Since my cock is smaller than everyone else's cock, and women don't like a small cock, I will become, in entirety, mind, body and soul, a complete cock".

Maybe if you would have restricted your rant to a couple of paragraphs, instead of showing that you spent days, methodically attempting to undermine the entire CBRS (not CRS, CBRS) they would take you seriously.

Now, with what started as a good letter, you are showing a personal vendetta to the people of rec.radio.cb, which makes you not a troll, but a flamer. If you don't know what a flamer is, I suggest you look it up on the USENET FAQs.

So, John, have a nice day, and fuck you. You deserve it.

Toll Free

>
> I am sorry to say that this has contributed to the fact that there is now widespread disregard for Part 95 evident on the part of all too many CB operators. The use of illegal RF power amplifiers on this band is rampant. Deliberate interference by some operators with legitimate communications being conducted by other operators is altogether too common here. The band is in danger of being overrun by inconsiderate, foul-mouthed buffoons with no respect for other users of this part of the RF spectrum, no respect for Part 95, and no respect for FCC enforcement efforts.
>
> In fact, some might say that the band has already been overrun by the outlaws. Personally, I do not believe this to be the case. I believe that the majority of CB operators nationwide would like to see courteous and legal operation...but certainly, the number of inconsiderate operators and the incidence rate of illegal operation in the CRS leaves much to be desired.
>
> I first got started in radio as a shortwave listener back in 1966 at the age of eight. At that time I was able to monitor the CB band using a general coverage receiver. I became active on the CB band at 18, at a time during which there was still general adherence to Part 95 on the part of the vast majority of users in the CRS. As I think back to those days, I recall hearing very, very few operators who did not use their FCC-issued station callsigns. I recall hearing very, very few operators who were not using type-accepted equipment. Rare indeed was the individual who ran excessive power levels or deliberately interfered with other stations, and nobody used the kind of language on the air back then that I regularly hear on the air today in the CRS. If they had, I'm quite sure my parents would have forbidden me to listen to them. As it turned out, my association with SWL and CB at a relatively early age led to my eventually becoming a licensed amateur radio operator this September. I now hold a Technician class license with callsign KC2FNG...but my purpose here is to address the CRS, so please allow me if you will to check my ham ticket at the door (so to speak) for the most part. Although I am a licensed amateur, I am for the most part concerned with the CB band on which I got my start in two-way radio communications.
>
> I, along with many countless other responsible users of the CB band, would like to see things return to that state of affairs. We would like to see the foul-mouthed, inconsiderate operators gone from our band. We would like to see those who run illegal and grossly excessive RF power levels removed from the CRS and the interference that they cause to other stations removed along with them. Unfortunately, the hands of responsible, legal CB operators are tied due to the fact that there is a lack of technical expertise for self-policing activities as is common in the Amateur Radio Service - not to mention the lack of anyone on the CB bands with any standing such as ARRL's Official Observers - and also, unfortunately, there is the perception held by both legal operators and by those who ignore Part 95 that the FCC does

> not care about the CB band. Thus, short of the undesirable option of

>
> I am not suggesting that the Commission involve itself with policing what is posted by these individuals on the Internet or with the content of their web site, I merely include this information to demonstrate to the Commission the complete disregard that these individuals display for the FCC and Part 95, not to mention the rights of legitimate, law-abiding users of the CB band. Since the web site is kind enough to provide a calendar of events detailing where and when these violators can be found, it seems to me that a timely visit to their "event" from an FCC enforcement team would allow the confiscation of this equipment, would allow for a lot of fines to be levied for some pretty serious violations of Part 95, and the money collected in fines could be used to fund further efforts to enforce FCC regulations. After all, by flaunting their complete disregard for the regulations under which they are supposed to operate on the CB band, these people are daring the FCC to do anything about. They are asking for it...so why doesn't the CIB give it to them? Once these people get together and start keying up their gargantuan amplifiers, I believe the use of a $30 field strength meter would provide all the probable cause anyone would need to have reasonable suspicion that a violation is being committed. The fines that could be collected would total a lot more than $30, and confiscated equipment that was then destroyed in accordance with the usual FCC procedures would no longer be available to contribute to the chaos that is caused on the band by the operation of such equipment.
>
> Furthermore, such an enforcement action would undoubtedly be widely publicized, especially in light of the fact that this particular group was just featured in two articles in Popular Communications magazine. This would serve notice in a very public manner to the outlaw operators on and near the CB band that the Commission is getting serious about Part 95 enforcement again. A great opportunity exists for CIB to score a major financial and public relations windfall here...a fact that I hope will not be lost on you ladies and gentlemen of the Commission when you read this. I fully hope that you will investigate by viewing the web site I have just brought to your attention, and have a look at the rec.radio.cb newsgroup for yourselves and see how blatantly these people publicize their disregard for the regulations, and direct CIB to take appropriate action so that the legitimate, law-abiding users of the CRS can see that the FCC has not abandoned the band after all.
>
> The second step that I believe needs to be taken in order to restore the CRS to a respectable status in the eyes of both the public at large and of the radio hobby community, is to amend Part 95 so as to make the job of the enforcement bureau easier. Admittedly, the enforcement task that the CIB is faced with on the CB band is monumental, due to the large number of users on this band, the fact that there is no licensing data on this band thus making it more

> difficult to identify violators, and the sheer number of violators involved as well as the apparent impunity with which they have ignored Part 95 - and continue to do so.
>
> The enforcement task is not made any easier at all by the fact that even stations running legal power at 27 Mhz can find their signals being propagated far beyond the 250 Km legal distance limit for communicating between two stations in the CRS. The fact that the only legal modes for use in this band are AM and SSB emissions doesn't help things any either since the undesired propagation effects are magnified by the use of AM and SSB, as opposed to FM which would be subject to the "capture effect" and allow legal operators to hear the local stations they want to communicate with, without interference from weaker signals propagated by band conditions from beyond the 250 Km limit. In addition to the above, there is the fact that thousands, and perhaps hundreds of thousands of stations in the CRS are crammed onto exactly 40 channels. This has led all too many operators to unfortunately seek quieter territory in the RF spectrum by operating illegally in what has come to be known as the "free band" - i.e., frequencies adjacent to the 40 channels authorized in the CRS.
>
> I have not, do not, and never will operate on unauthorized frequencies. However, I can somewhat sympathize with the otherwise considerate and responsible operators who seem to find it necessary to operate in the "free band" in order to escape the chaos that now exist on the 40 legal channels, and which are the result of overpowered stations, deliberate interference by some stations with other stations, inconsiderate operation by foul-mouthed individuals, etc. As a no-code amateur licensee who thus does not have HF privileges, I can also sympathize with the "freebanders" argument that they are operating in the only place in which they can operate on HF without knowledge of Morse Code in order to obtain an amateur radio license that grants HF operating privileges.
>
> Although I do not condone the out-of-band operation practiced by the so-called "Freebanders" and in fact I object to their operations due to the fact that all too often they operate in the 10 meter ham band where I eventually hope to gain operating privileges legally by upgrading my ham license in the future, I must in all fairness point out that aside from the fact that they are operating on unauthorized frequencies, the operators who I hear on the so-called "freeband" when I listen there on my general-coverage receivers do seem to be a lot more considerate and responsible with respect to their other operating practices and procedures than do many of the operators who confine their operation to the 40 channels authorized by Part 95.
>
> From this, I am led to believe that the majority of the operators to be found in the "freeband" regions would seem to be those operators who are the most technically adept and thus able to modify their equipment to operate on frequencies it was not designed to operate on. I think it is somewhat a shame that those people are driven to violate Part 95 because the behavior of those they wish to leave behind on the "legal 40" has become so commonplace that they feel they must take

> such as drastic step as operating on unauthorized frequencies in order to escape the more blatant practitioners of CB barbarianism. While I would much rather see these people do a little bit of studying and get their ham tickets instead, the fact remains that many of these freebanders wouldn't be where they are if it weren't for the rampant abuses going on in the legal CB band.
>
> The question, then, as I see it, is one of how to deal with the multiple problems that have arisen on and around the CB band as the result of the conditions which exist there. I have given the matter some thought and have come up what I think is a novel idea that will solve two problems at once. It would solve the problem with the CB band, and it would solve the problem with the argument in the ARS with respect to whether or not we should have no-code HF licensing. Please permit me, then, to propose the following to the Commission:
>
> I believe that the current CRS should be reorganized as part of the Amateur Radio Service, with station licensing as a prerequisite for operation after January 1, 2002. This would give current CB operators two years with which to comply with the new licensing requirements. After January 1, 2002, the possession of transmitting equipment without a station license would be grounds for confiscation of the equipment as well as the imposition of fines and/or imprisonment for violators. Equipment confiscated from violators would be auctioned for sale to licensed users who are authorized to legally possess and use that equipment, and the proceeds from those auctions, along with the money collected from violators in fines levied by the Commission, would be used to fund enforcement of the FCC regulations.
>
> The new CRS that would then exist after January 1, 2002 would be a different class of license within the Amateur Radio Service. This would of course necessitate a reorganization of the amateur radio licensing structure at that time...but since I understand the Commission is considering reorganizing the ARS licensing structure anyway, I don't see this as a problem. The specifics of the ARS reorganization would of course require input from other amateurs, but for what it is worth, my own ideas with respect to this issue would be to have the following four license classes:
>
> 1. Amateur Novice - This would be an entry-level, no-code license class permitting operation on HF on the 27 Mhz band only. Authorized emissions would be AM, SSB, FM, CW, and PSK-31 data transmissions. The band for this class of license would be created by combining the current 40 CB channels with additional radio spectrum adjacent to the current CRS allocations.
>
> Legitimate users of licensed services in those frequency ranges have largely abandoned those frequencies already anyway due to interference from unauthorized operations there, so it should not displace very many, if any, users from this part of the RF spectrum if the Commission creates an 11 meter amateur radio band encompassing, say, 26.00 to 27.80 Mhz. Sub bands for AM/SSB/CW, FM, and PSK-31 operations would be specified - personally, I would advocate having FM and data

> modes sharing spectrum above or below the current 40 channels to
> minimize interference from those modes with existing radios now
> available for CB operation...perhaps adding ten more AM/SSB channels
> below or above the current CB band, and authorizing FM below that
> range of frequencies, and CW and PSK-31 emissions above that range. I
> leave it up to the Commission, however, to determine the most
> efficient method of allocating the available RF spectrum into sub
> bands for the permitted emissions type, perhaps with input from ARRL,
> and/or from current users of this portion of the RF spectrum other
> than myself.
>
> The maximum allowable power levels here would be QRP levels of 5 watts
> or less, to remain in accordance with the ITU treaties that require
> knowledge of Morse Code for operation on HF otherwise. We would retain
> the low-power status of 27 MHz but expand it, authorize more emissions
> modes, and bring it under the auspices of the Amateur Radio Service
> where it would be subject to volunteer examination as a license
> requirement, and thus also bring it within the jurisdiction of ARRL
> Official Observers, which would make effective enforcement possible.

We have ours done every six months so as to be as accurate as possible for
our
customers. We use them on our work benches.

That is funny... Sending a Dosy off every 6 months to be calibrated.

Just think, in a year, you could have bought a used Bird. In another year,
you could have bought a few used slugs.

The Dosy is an innaccurate pile of fommunda... And you say benceS...
Implying multiple.

Tell you what. You send me those meters every 6 months, I will recalibrate
them, to Bird specs, and wil charge you half.

Toll Free

i can copy code in my head at around 13 to 15 wpm. does that mean i want to be a ham?? hell no. i have no desire to talk to people on repeaters going hihihi and telling where there destinated too. i do all the dx'ing i need here on 11. if i feel some big thing lacking in my life in the future i may go get liscenced so i too can have that superior feeling that you and some other hams have but for right now i have a life.

A superior antenna system would serve you better than a linear, which is why I do not use a linear. Perhaps I could transmit farther with a linear. But, unless the other person way off in the distance also has a linear, I'm not going to hear him.

And, if I cannot hear people as far away as my radio can transmit, I stand a good chance of interfering with the conversations of others (and never know it because I can't even hear them talking).

Instead, give me a good antenna system anyday. With a good antenna, I can be heard over greater distances and hear the people who are responding.

I have an excellent antenna system right now. And I have no problem talking over the noise. And when the noise is down, I can talk over an amazing range. In fact, I routinely talk to people my neighbor, with the linear amp, cannot even hear. Oh, they can hear him with the linear. But he cannot hear them. So, he can only sit and listen to my side of the conversation when we're talking.

I have tried to talk him into trashing the linear and getting a better antenna setup, but he is too stupid to listen. He seems to think it is cool to use a linear, and does not want his friends to look down on him because he does not have one. So, he hangs on to his linear, makes a lot of noise on the radio, gets people mad at him for interfering with their conversations, and misses out on those truly great distance contacts.

And, for me, the ability to catch those distance contacts are more thrilling because the catch is made because of my skill (operating skill, antenna skill, etc.), not because I can flood the airwaves with a linear. Anybody with a few bucks (even a moron) can buy a linear and flood the airwaves. It takes skill and knowledge to put together a good radio station (which does not need a linear).

> hundred dollar mega-station that gets about the same results. Maybe it
> is time to re-think our ideas about how to get good results from our

> equipment. Thirty years ago CBer's were happy with 5 watts and a simple loaded coil antenna that looked nice and didn't bang into every low tree branch or garage door. We need to stop listening to the equipment pushers and encourage others to maintain simple, legal and efficient equipment. Good engineering practice towards adequate modulation and efficient antenna systems will do more to improve CB than all of the extra equipment in the world. We also need to urge the FCC to make needed changes in the CB regulations such as allowing FM. FM would solve a lot of interference problems. The way to do this is to let CB equipment manufacturers know what you want in your radio. They seem to have a lot of influence with the FCC when it comes to getting approval for new products such as FRS radios. When they see that several hundred thousand people are interested in new FM CB radios then the action will begin. If you think this is a good idea then send your favorite manufacturers some email today. CB improvement is up to you and this is your chance to do something meaningful for a change. Thanks for reading this post. I feel much better now that I have got this off my chest.

Was listening to this chaotic frequency yesterday afternoon. What a damn mess! Seems to be two opposing "factions", fighting for control of the frequency. One on the east coast and the other in Texas. Lots of jamming, profanity, music-playing, and general disorder. What gives?

I know you are tired of hearing this but...........Shut the hell up!
Your crying isn't going to change any minds about amplifier use or the fact that people want the most they can get from their equipment. If people want to mod their radios, that's fine for them........It doesn't keep you from running a stock radio! Go on and live in you 55% modulation world and leave the rest of the world to do as they like without your feeble minded attempts at being a radio nazi. Facism will never work!

I had this happen to me too. In my case, the two "bearings" that held the meter movement were too tight. I took the meter apart and everso gently loosened the front bearing (actually it is a jewel) with the screw and presto, it came back to life.

I wouldn't recommend degaussing a meter. They use a permanent magnet and if you reduce its magnetism the meter will read in error. One last thing. Much as I love analog instruments, I use only digital meters now. Analog meters simply load the circuit down too much in many cases. This is especially true of CMOS circuitry and when measuring things like 0.6Vdc bias. I would highly recommend Fluke meters. They are deadly accurate, the batteries last forever, and they are made in the USA.

In some areas, local police are already taking action in this area. They are using the premise that the "illegal" operator is depriving the neighboring homeowner (the complaintant) of the peaceful enjoyment of his/her home. Many states already have laws on the books supporting this premise, so it is fairly easy to charge the "illegal" operators under one of these statutes.

This also applies to the "illegal" operator depriving the radio operator of another radio service (the complaintant) of what is legally his/hers (the radio frequency). Again statutes exist in most states that support this premise.

Note that both of these are not based on the actual radio itself, but on the results of the use of that radio (hince avoid FCC entanglements). Let me give an example that might explain this idea better.

If a drunken pilot, operating his aircraft in a dangerious manner, were to crash his aircraft into a town, the local police would not have to go through the FAA to charge the pilot with violating a whole range of local statutes. In other words, they are not going to charge the pilot with violating FAA rules - they are going to charge him with operating a vehicle in an unsafe manner, reckless endangerment, etc.

Why should this idea not also apply to the "illegal" radio operator? They are not charging the operator with violating FCC rules. They are charging the operator with violating local statutes which apply to all who live in that community.

The measure currently before Congress would make the process a lot easier (less stretching to make local statutes fit the problem), but is not absolutely necessary to police local "illegal" operators.

What does not exist in most police departments is the expertise to hunt these "illegal" operators down. However, some states are waking up to the idea of using outside individuals, such as Amateur radio operators with RDF skills. Others are turning to outside agencies with RDF capabilities, such as the Coast Guard, Coast Guard Auxiliary, Civil Air Patrol, certain military radio facilities, and others.

Could this peckerhead have been talking about me again???   I'm flattered! ! ! !
I must have changed my ISP because mindspring cancelled my account because
of the bitching of one little turtlehead like him ....HAHAHAHAHA.....I
don't think so !
The new local ISP was nice enough to be able to give me a static IP address
that Mindspring couldn't do (needed for server access).
I'm still here being my rude obnoxious self ! ! ! !

I have a Wilson 5000 antenna, with a Cobra 75 WX ST, the remote mount unit. I have not been able to contact anybody on this unit since I bought it three days ago.

I live outside of Sacramento, ca so lack of activity is not an issue.

Any ideas?

Thank you

Don

Just like all the people who carry cellular telephones?

> They all have home made antennas that
> suck and have them way to close to
> each other and have to use antenna
> tuners to get the swr down.

The antenna tuner is to help our antenna systems cover the huge range of frequencies at our disposal. No antenna can cover the range of frequencies, so an antenna tuner is used to match an antenna to the frequencies we use less often.

> They use junk equipment

My FT-847 would smoke your cheap CB.

> and don't know anything about electronics.

Forgot more than you will probably ever learn. But, since it is illegal to even open your CB radio, electronics is not required for CB. For that matter, it is not really required for Ham radio either. So why bring it up?

> They are all just want-a-be CBers.

Not a very good attempt at a troll. Perhaps if you learned a little more about Ham radio, you would be more effective.

> Whats the difference between a Tram D201 and a D201A?
>

The major difference is the D201A is a 40 channel rig, while the D201 is 23 ch.

There are some major changes inside as well, including the new style boards and extra xtals to go 40 ch.

On the boards they didn't completely change, they made revisions and changed or left out some components. One notable change was on the main audio brd. This change was inspired by a pyromaniac. He left out several resistors and a fuse that provided some protection to the hi power audio tube. This change ended up burning up several of the D201A's, literally! The component holes are still there and if you have one of these you might invest a couple bucks and a few minutes to reinstall these components. It doesn't hurt the performance and ensures no fires.

There were some subtle changes on the D201A. The meter circuit, which on the older one was unstable, now uses an op-amp instead of a tube.

There were at least a couple D201's also. The old original had no pcb and incorporated a VOX circuit which you can see the controls for on the front panel.

These were all great AM rigs and still today can stand up with most any export. They were not great SSB rigs although with some time and patience you could make it decent.

Hope this gave you some useful info.   BobC

Hmm, I think your missing the point. People freeband so they don't have to play ham, thats the whole point. Some people just want to talk on the radio and not go the route of the whole geeky ham radio fraternity.

you do not need to be a member of any fraternity as you say
just get a few of your friends to get a license and you can talk about
any thing you want as long as it is within the rules unless you
want to jam cuss scream play with you noise toys in that case
it is not legal to do that any place

Debbie,

I commute rt 80 in NJ and my wife and I really find 85% of the drivers polite, helpful and above all, extremely funny to listen to and talk to. Unfortunately, there is an erroneous opinion in the general public that CB in general and drivers in particular are nothing but profanity. I've found mostly the opposite to be true. Granted, when we come up on a convoy, yeah... it might be a bit intense, but when she keys up, they suddenly tone it down and really humorous banter starts. She is courteous and polite and also loves to joke around, the drivers respond in kind. I think that's quite normal human beheavor CB or anywhere else.

Greg

browser is share ware name of it is "free agent"
the other stuff like email stuff comes with the internet junk
the windows 3.1 came with the computer
and all of the other stuff is share ware junk
i hit the share ware places hard

and even if some one did the only person that is
involved is the dude pirating the software
but on cb it involves everybody

i have no problem with some one driving an old car
i do get mad at the dumb brain dead people that own those
ferraris that think they should be able to drive at 200mph
if the speedometer has 200mph listed
all cars should be held to reasonable speed

if you are talking about modifying a 10 meter radio to operate on the cb band
it is legal to do but you can not transmit on the cb band with a non type accepted
radio to do so is illegal

A little revisionist history? For the record, #12's
e-mail account was cancelled by his employer
(Lucent) after he was discovered using it
to conduct the equivalent of a "design/repair clinic"
for illegal CB amps - on company time.

i am posting strictly as a cber in this newsgroup
and strictly as a ham in the ham radio news group
because i am active in both
if you are interested in ham radio go to one of the ham radio
news groups and ask for some info on getting a license
or go to www.arrl.org
or go to rat shack and ask them

you are not a geek just because you know how to hook up a coax
to the back of a radio
like people don't know how to read a dip stick
to many people don't want to know any thing or be
associated with any person that does
heck most people think people that run cb,s are geeks
people will just have to get over junk like that
we should be teaching basic electronics in high school
we live in 1999 not 1950 we are in the electronics age
the schools should teach appropriately

Radio Shack has a new 10 Meter radio AM/FM/SSB. 7 watts AM, 25 watts FM/SSB called the HTX-10, (not 100). Looks as if they took the advice of all the old HTX 100 users and put in AM, both USB and LSB, and FM splits for repeater use. Anyone know the PLL chip and if there is any data on expanding it's freq coverage? 28.000-29.669 is standard. $149, not bad.

Yes, this is the same stupid fuck that I ran off a little over a month ago.

He came out and tried to tell everyone that his 9 dollar JCWhitney antenna was better than anything else made.

He is still a stupid fuck, and quite obviously, always will be! Judging from the fact that he cannot learn or has chosen not to.

Typical poster child for fetal alcohol syndrome.

C'mon and tell us how you build cars and big radios and how everyone gives you their Wilson, and although the Wilson is the shittiest antenna on the planet how you cut the stinger and they make a kick ass 6 meter antenna.

Don't worry, we haven't forgotten who you are, you stupid childish shit.

Changing your tune after you got run off the CB newsgroup last time, are we?

Still think that the Wilson is a pile of shit?

People still "banging down your door" to trade in their brand new Wilson 1K antennas in trade for your JC Whitney specials?

>
> >So, John, have a nice day, and f&%$ you. You deserve it.
>
> that is original
> can you think of any thing better
> than that

Why yes, I can. However, it appears that you are nothing but a mina bird, and why would I want to give you anything that even remotely resembled an intelligent remark, when all you would do is attempt to comprehend what I was saying, and have an aneurism in the process?

>
> like giving some reasons why higher power should be allowed
> on the cb bands

Because the 4 watt limit would NOT let someone talk across the city of Houston, and I would like to be able to talk to my wife, mobile to mobile when we are travelling to / from work.

With 4 watts, it just won't happen, Jack! Hell, Houston is so big, that there are some repeaters that I can't get into with 10 watts!

> i do not mean for skip and other junk

Junk, eh? Since when where you appointed to be the man that had final approval of what was junk and what wasn't?

I use my radio mainly for skip, but also locally. I would say that the major portion is for skip. Why is that "junk"?

Or, more to the point, and the truth I would think, did you use the word "junk" because you could think of no other modifier (adjective) than the word "junk"?

I believe it was.

> but why for any reason should high power be allowed
> on the cb band which will follow along with it,s intended purpose

Once again, we have confused you by using proper punctuation, I see.

Sorry. That sentence makes absolutely no sense.

> if so tell the fcc your idea if not then do not yell at us for trying
> to tell people to not use amps

Why do you (people) always insist on us not telling you what to do, when it is us rebelling against you telling people what to run and what not to run?

Is what is good for the goose no longer good for the gander?

Go get a real ham license, then come back and talk to the rest of us.

Have a good day, kid.

Talked to Dennis yesterday.

He told me to pass the nickel to rec.radio.cb that he says hi, and hopes everyone is doing well.

He also inquired about your Penetrator 500 project(s) Jay. I told him that they where coming along fine.

He is a very illiterate SOB that has been run off the newsgroup before.

This is the same idiot that attempted to tell the world that his 9 dollar JC Whitney antenna was better than a Wilson 1000.

Actually, Joe, nothing of what you say is true.

I suggest that you attempt to find out the facts before you spew, because comments like this can be thought of as slanderous.

So then you believe that just because you have nothing to gain by cleaning up software piracy we should not discuss it?

Hmm... Seems we hit a nerve with that one.

Too bad. Looks like we found a weak spot, although I doubt this piece of white trash would know how to FTP to his own ISPs machine!

Telnet / Shell Account... Words of the day.

What are the best ways to get the "export radio" version
of this radio in the US that includes CB, 11M, etc?

Are there dealers in the USA that sell the George with the
expanded frequency and mode? If so, which dealers?

And, would these be the factory export version or the USA
version modified?

I found if youre not into this it's not obvious how to do
it so thanks for your help.

Another myth is "all truckers run amplfiers". Very few care about that
stuff. Most just want to get out as far as across the median strip. I would
be surprised if even 40% even bother to get their radios tuned. Line of
sight is usually all that matters to most. Right out the box is good enough
for most.

I just love cuttin off the big horn. I done collected so many radios i
intend to have a yard sale next weekend. 431 Oklahoma just got down.

Invert that group and thats pretty much it.
I hear that the Midland 79-290 is the greatest thing since sliced bread.
Haven't had the pleasure to own one yet.
Uniden Grant is nice     PC- 122 is good too
Cobra 148 in the right hands can kick ass.
Good luck and good night.

Or if you have a condition maker. I speak on Mean Pill when the band is dead. I hear him tune up and call his name. You make your own conditions.

The funny part is someone throws out a bunch of statistics and numbers that
don't have any fact to them and everyone seems to  believe them, Just
because you cannot hear someone doesnt mean they arent talking on the bowl
to someone else who you cannot hear. Its a game of condition and postion, If
mother nature doesnt lift her skirt up and allow you to sneak on in I don't
care how long and how strong your station is. You cannot talk to West coast
if conditions arent in your favor you'll be stuck talking to the Bayou,Big
Horn, and the Mag if thats where it is rollin....

Are there any decent CB shops in NJ? (excluding Buzz Bros, Community
Communications, and Advanced Specialties.) It's hard to find an honest shop
with an owner that doesn't have an attitude problem.

Thanks a lot.
PB010

Single Side Band is a derivative of AM.

If you really want to get something that is "with the times", there are
other modes of transmitting a voice.

Hello.

I,m looking for any owner of the BLACK PANTHER CB-radio.
This radio hass VFO and AM/SSB

Begin 1980 perhaps late 70's

I just want a picture for my CB-Radio Picture Museum.

Please help me.

C.B. Janse

Oh, by the way, all of you people who like to log on to the FCC
website and send them email about illegal operations on 11 meters, I
hope your not using any software that was pirated because as soon as
you log on to the FCC website, it will set a cookie which will examine
the windows registry and send them a list of illegally copied programs
on your hard drive.

Just thought you like to know because pirating software is a much more
serious crime than talking on 11 meters with to much power....

Both antennas work on the same principle as the "Isoloop" antenna that AEA
makes/made.

How about getting a chimney mount from Radio Shack. This is the kind
with the stainless steel straps that would go around the tree and
connect to a mast holder. Then, get 5 or 10 foot section of antenna
mast and mount it using the U-clamps.

Can't seem to squash discussion of "legal operation" here on the newsgroup, eh, Toll?

Too bad. You'd like the Newsgroup to be your own private little club dedicated to keydowns, power, and thuggish boasting about "who is the loudest and proudest".

But the John Kasupos and the Dwight Stewarts keep appearing. The idea that your practices are rude and inconsiderate, and are ruining the CB band for other users, is expressed again and again and again.....

Look for a great circle map maker on the web,its free.All you do is enter the lat and long of your QTH and it makes a map with you in the center and the continents distorted to appear like they do to your antenna.

don't worry about it , a lot of times people won't talk to you even if they hear you , it is a political thing, as it is in a lot endeavors in life. but if you get a big enough station pumping those watts , oh you will be heard

and you will be answered. it is a power trip and if you make it hard on
their ears , they will answer you , but you got to do the job right, or
forget it. i still say a 50,000 watt simulcast of the rush limbaugh show
would do the trick, and be somewhat humorous at the same time. can it be
done. yes it can. will the tube run hot , not if you got it cooled
correctly. just take a tour of your local commercial radio station and see
how its done.   just my thoughts on the matter,.......icm out......

i can't believe kasupski is going to write that letter. i think he is one of those guys who can't figure out where he belongs. i don't know for sure, but he has probably run out of rope on the ham radio ng, so now he is here. it is that kind of legalistic bs that pissed off number 12 and caused him to get the hell out of here , so now this saga continues, oh well. maybe kasupski will get a life someday. frankly he reminds me of a rat. somebody that is a tattletale and runs and tells the teacher everything he sees and hears. you dance with the devil(the us government) and you will pay the consequences. that sob will come around and bite you in the ass. the best thing to do is if you hear something you don't like on the cb band, johnny old buddy, just go to another one or turn it off. this crap of running to the fcc will backfire someday and maybe sooner than you think. they may just outlaw all radio operations by civilians. how do you like them apples johnno. farfetched? me thinks not. how are they going to keep control on a civilian population when they start this new world order nonsense? think about it mr ham guy. take that pickle out of your mouth and put that in your pipe and smoke it,..........icm out................

Man what a lot of typing, happy e-mailing, you will not be the first, I am happy to say that I run my radio station completely legal, the only piece of equipment I own that is illegal is a a cobra 2000 with the modulation limiter removed, and I cannot run it because it interferes with my neighbors computer speakers, oh yeah and my antenna is a little higher than rules allow 61' to the top.

1 at least you can hear the people talking
2 there is only one or two  groups of dimwits
3 they do not splatter +/- 500kc with dirty linears
4 it is limited to the USA and surrounding aria
```

one the cb band
1 there is 40 channels of dimwits
2 the dimwits trash the band for 12 to 15 hours a day
3 you can not hear a thing but jdlsajflkdjlkajfojlkfj;oajfojaskfjl;aj
4 each one of the big wads splatters over +/- 500kc
5 even at night the local kilowatt wanabes think there big
6 and they even splatter a good chunk of the band around +/- 100kc
7 the cb band is trashed world wide
8 they even go outside the band to spread the chaos from 25Mc to 28Mc

that is original

can you think of any thing better
than that

like giving some reasons why higher power should be allowed
on the cb bands
i do not mean for skip and other junk
but why for any reason should high power be allowed
on the cb band which will follow along with it,s intended purpose
if so tell the fcc your idea if not then do not yell at us for trying
to tell people to not use amps

There may be several days between skip occurences, but it
does happen. As the cycle peaks, skip becomes more regular.
The last cycle, I would talk to a guy in Texas every afternoon

coming home from work. I've heard him and talked to him recently.

Hey Bennett, stop antagonizing the CB'ers. You're only 22 and haven't
been in radio long enough to know what you're talking about. You're
doing the same thing on this newsgroup that you're complaining about on
the airwaves.

Anyone who follows the posts of some Amateur radio operators on this newsgroup, can see a direct similarity to the conduct of Amateurs on 14.313MHZ & 3.950MHZ. They both have nothing better to do than excite anarchy and use any excuse to justify their activity. It's the same old story. They act like a bunch of old ladies. Nag, nag, nag. I'm right, your wrong. Nah nah nah nah nah. Who cares? Get a life. If this is how you get enjoyment out of amateur radio, or this newsgroup, then i do feel sorry for you. Nobody wishes to participate in this immature behavior.

Get a life, or take it to: alt.whine That group seems more appropriate for you.

Who is this Rick Bullon ? What a bunch of horseshit!! Riley Hollingsworth does not exist. I refer to him as the Wizard of Oz. This fool is trolling the CB Web Rings looking for illegal activity. A group of Hams? a group of one is more like it. FCC has got more to do than worry about the Superbowl functions. Hell they can't even control the Hams on 3.950. The facts are:

1. hams lost 11 meters for lack of use.

2. they spend way to much time worrying about 11 meters.

3. most hams are ARRL dupes and stooges.

4. most of the superstars on the bowl do not give a rats ass about RCI 2950s and freeband operation.

5. I will bump down on the bowl when i feel the need. In short Mr. Bullon can kiss my entire ass.

hello, ... sorry, i�m perhaps wrong with this group... i listend to a 11-m-dx and there was someone who decribed his antenna in brasil as some wires in the trees like a yagi, but the wires more than 2 or 3 lambda long, with resistors at the end. i did not find anything in the literature and i don�t know any software which is able to construct yagis with more than 1 lambda.... is that possible? does anybody knows exactly how to construct such a monster-yagi?

ciao udo
#
ich habe k�rzlich ein 11-m-DX geh�rt, in dem ein Deutsch-Brasilianer seine Antenne beschrieb. Wegen fading leider unvollst�ndig. Nur soviel: Mehrere zig Meter lange D�hte zwischen B�umen/Palmen gespannt und das ganze wie eine yagi aufgebaut, mit Widerst�nden an den Drahtenden?!? In der Antennen.-Literatur habe ich nix Vergleichbares gefunden. Und ich kenne auch keine Software, mit der sich yagis berechnen lassen, die mehr als 1/2-lambda kennen... Wer wei� Rat? Gibt�s sowas �berhaupt? Wer kennt eine Aufbauanleitung?

Tsch� Udo

I think you misunderstood me.  I like talking about geeky stuff like
antennas, and propagation, etc.  What I know is that most people don't
and they won't get a ham license because they don't want to be
indoctrinated into geekdom.  Although, they might still want to talk
on the radio, and they may still be interesting to talk to.

>but on cb it involves everybody

Sorry, I don't think so. Software piracy causes the loss of billions
of dollars every year to the software industry. Talking on 11 meters
really doesn't hurt a flea.

I'm willing to bet that probably every licensed ham radio operator has
at least on pirated copy of software on his or her computer. Yes,
this is a blanket statement with nothing factual to back it up, but
this is my opinion.

As a matter of fact, I'd even go so far as to claim that FCC personal
have pirated software on their office and personal home computers.

So, before people go bad mouthing 11-meter operators about operating
outside the law, take a look at your own PC's and see if your
operating within the law with regards to your software.

It has been years since I was active in CB radio except for my old radio in the car for trips. Now I need to install a radio in my motorhome and I need to know how well the brands have fared over the years.

I want to use a SSB and the brands from the past that are still around are:
  Cobra (was top of the line)
  Uniden (was just below Cobra)
  Midland (pretty much midrange back in the past).

How do these stack up today and should I look for a different brand now?

Does anyone out there in California remeber the OZ club? It usuallly met up
on the freeband and was run by OZ#1 Bob from Burson California. Anybody on
the west coast with any info on this former club would be appreciated.

Going to take my test next saturday and if you are what is to be
expected on the HAM band, then I might as well stay where I am at.

>>on the cb band there is 40 channels of dimwits

>This is just plain false!

You are both right.

What you hear on 11 meters depends on what part of
the country you are in. Many rural areas have polite and
friendly groups on the air. Many cities are one, huge,
hopeless, RF trash heap. Most places are in-between.
Sadly however, it seems that the "trash" is increasing.

>antennas in trade for your JC Whitney specials?

you do not get it do you i was just trying to drive you nuts
when you told me to learn to spell i just started to jumble letters on purpose

like sowe for so and so forth
and you are starting to hipper ventilate like you did then
so just calm down and have a pepsi or something
i am just voicing my opinion like i do on the air
i do not care what people think of me i just feel
like wasting my time having a good scream with the people hear
just trying to slow down or deter amp users and noise toy people
kind of like a person jumping in front of a runaway train trying to
stop it but this is far less deadly and a lot funnier

>
>>
>> >So, John, have a nice day, and f&%$ you. You deserve it.

well it hampers other peoples use of the band and generally annoys most
so what would you call it
1 junk
2 a spreading scab
3 eye sore that will not go away
>
>I believe it was.
>
>> but why for any reason should high power be allowed
>> on the cb band which will follow along with it,s intended purpose

>Once again, we have confused you by using proper punctuation, I see.
>
>Sorry. That sentence makes absolutely no sense.
>

well the intended purpose is for local communication
high power amps will clutters the band so that will go against it's intended purpose
noise toys waste bandwidth so they are against the intended purpose
shooting skip is not local communication and clogs the band so it is against the intended
purpose
>
>> if so tell the fcc your idea if not then do not yell at us for trying
>> to tell people to not use amps
>
>
>Why do you (people) always insist on us not telling you what to do, when it
>is us rebelling against you telling people what to run and what not to run?
>

i tell you to keep it legal people should have no problem with that
you say you should be able to run amps if you want to but that
unnecessarily clogs the band to the point i can't use it
that goes against my authority to use the band
as specified by part95

>Is what is good for the goose no longer good for the gander?
>
>Go get a real ham license, then come back and talk to the rest of us.

this has nothing to do with a ham license we are on the cb newsgroup
amateur radio has nothing to do with it
i am talking as a cber that is fed up with the cb band clogged with skip shouters
>

that is the main point but evidently it don't work with the people hear
i was just giving them there own medicine but every person gives up
some time and i think i just have so let the be as they are
so i will just say what so many cbrs have stated
"to heck with the dam cb band you can have it i will take the time to
up grade and forget about this junk hole"

I've just been asked by a colleague whether any of you guys have considered building switching power supplies to generate the high voltage for the tubes in the mobiles?

Higher efficiency, less current.

Possible?

Did you know that if you stack 4 beams on top of each other and drive them with 1 Watt your effectively doing 100 KW or more? I you drive it with 100 Watts your effectively radiating 10 MW or more. This with a unbelievable front to back ratio, meaning that you can hear a cats whisker whistle in the wind and if you can hear it you can operate it!

Lois, are you saying that your husband threw people who were
advocating law-abiding behavior out of the VFW hall? Nice guy you
married there.

I know. I repair the radio's for em. In my part of the country if you get on a radio and your a female, you have to listen to lot lizard stuff from the male.

I have even had one tell me they were coming in to kick my ass. I didn't say anything but hi. So I told them to come on. Those are your microphone warriors. I don't use the language that is common on the cb radio and I don't condone it. I don't tolerate the Lords name being taken in vain either.

For sensitive people was who the message was for. I let a lot slide off my back as well. But I have to listen to it 10 hours a day. Thats why we don't put a base station up at our house.

Have fun. Thats what the CB is for. That and safety.

Contact Bill's Two-Way Radio (http://www.bills2way.com). Bill seems
like a competent, honest guy. Don't let your "tech" keep the radio
"for parts!" The radio can be fixed . . .

  Many Amateur Radio operators also use CB radio equipment occasionally.
 Because of that, we also participate in conversations here.

> If not, how do I get into the Ham
> newsgroups? I'm a CB'er but interested
> in what Ham radio holds.

Depends on what you are interested in - there are more than a dozen Ham radio newsgroups. Try some of these...

rec.radio.amateur.misc
rec.radio.amateur.homebrew
rec.radio.amateur.equipment
rec.radio.amateur.antenna
rec.radio.amateur.dx
rec.radio.amateur.space
alt.ham-radio.vhf-uhf
alt.ham-radio.dxing
alt.ham-radio.eme
alt.ham-radio.hf
alt.ham-radio.marketplace
alt.ham-radio.mods
alt.ham-radio.ssb

...or search for other ham radio newsgroups. Again, there are many others (some more active than others).

You might also want to check out my web page (click on the link below). It contains some information about Amateur radio and how to get involved.

Also, I'll be glad to help with any specific question you might have. Feel free to send email anytime.

Hello Toll Free: Tell Dennis hello, and that he is missed. And we all want him back on rec.rdio.cb I still have some of Dennis postings in my P500 file book, and they have proven to be dead nuts on.

The Penetrator 500 project is going ok with anticipated problems. But the bugs are being worked out, in time. Right now there are two Proto-Types New Design (ND)P500 5/8 wavelength, 4 ground radial, antennas are up, and being testing. I have pictures being processed showing 3 antennas up at the antenna fence. (A chain linked fence I have attached the antenna masts to)

You can see the New Design P500 at Woody World CB web site, just click on the "Reader Mail" section on the left. Also, be advised, Woody's web site gets better with time, and it is well worth the time to visit with Woody.
Tell Woody Jay sent ya!
http://www.cbgazette.com/gaz2.html

Jay at jay123a@qnet.com .... In the Great Mojave Mojave, just down the road ah ways from the fillin station.

Is there any way for something that high up not to be a lightning rod? I think that if I use as little metal as possible that it will be less of a threat. I think I'll whittle an 10 - 15 foot length of oak pole, possible a stair handrail, to mount the I-MAX and use 8" lag bolts to secure it to the tree. This would minimize the usage of metal in such a dangerous situation.

I also will investigate in-line lightning arrestors and switches that direct any strike to ground when the radio is not in use.

Still haven't got the antenna so I'll wait until I get a good design. Lots of help from the NG... Thanks keep the ideas coming!

Each brand has good equipment. In other words, there is little difference in the equipment quality. Instead, shop for features, price, and whatever else fits your fancy.

Having said that, I think the Cobra overall has better SSB performance. The 2000 base and 148GTL mobile are about as good as it gets. The 148GTL mobile could use a serious make-over - it still looks like something out of the 70's.

But I should also point out that many of the Uniden radios are using the same electronics as the Cobra radios, so should sound just as good (but don't in my opinion - Uniden must tune them up differently).

However, the Uniden Washington is sweet, and worthy of consideration (the Grant is not bad either). Both of these once were sold under the "President" brand name, but are now sold by Uniden.

Midland does not support SSB as much as it did in the past, so seems to be slowly falling behind in performance in this regard.

Would you please stop whining? You sound like a peevish little child, ignorant of the truth, and too stupid to know it. I'm glad that all CB'ers are not like you. Grow up.

Hello N9wos: Dead wrong! There's a mod out. I think they did it to annoy, you, seems to be working. Good deal.

Do you really believe your unfriendly and snotty ways are going to change people in the CB Radio Service. Your postings are about as effective as waving a red lantern at a run away train. But the thing that's amusing is that you won't change or try understand how to talk to people. Why is it that so many hams are snotty and unfriendly? Think people are going to want to study the code, technical material, and invest money in radio equipment to talk to the likes of whiners and complainers like you?

Get a like and grow up. You'll be happier and might get laid once in a while.

Jay in the Mojave

The "hams" lost the 11 meter ham band because of a lack of use of that one band - the "hams" were too busy using the more than twenty other bands they have (and we have the CB band to use also).

Don't you wish you had that many frequencies to operate on? The two meter ham band alone is over eight times larger then the entire CB band. Its not that hard - get a ham license. But that would mean that you would have to obey the rules - something that I just don't think you are capable of doing.

> 2. they spend way to much time worrying about 11 meters.

I think you mean the Citizens Band, which is not part of the 11 meter band. Under international agreement, the 11 meter band spans 25.670 MHz to 26.100 MHz. The CB frequencies don't fall within that frequency range.

If you talking about our concern about CB, then we can discuss that. We (the "hams") also use the CB occassionally, so we have a right to be concerned about it. Enough said.

i couldn't have put it better myself. but it would be unwise to not pay attention to the fcc. they may return to the days of the 1970's. of course they would need a massive manpower increase and a accompanying increase in their budget to accomplish this. since the advent of the computer age, they are most busy and do not have the time, money or manpower to police the 11 meter band, but i will stay vigilant. i don't trust governmental agencies. who would have ever thought that american tanks would be used in a police action against a religious group, so who knows,.......icm out.........

Anything above man made structures is a potential lightning rod. The only thing you can do is lessen it's attractiveness.

Lightning arrestors don't do squat. Strong Earth ground is your best bet. I run solid 6 or 4 ga. copper wire from antenna mtg brkt to 8ft copper grd rod, and inside coax when not in use is screwed into a SO239 which is connected mechanically to a solid 6 or 4 ga grd wire to outside grd rod.

IMO, If you're going to take a hit, you're going to, there's nothing you can do about it. The best you can do is make your setup a less attractive path than anything else around it.

we wait for more skip. all the comments you make show your little knowledge of our band. true enough there were many days that no voices could be heard on 10 meters but there would still be dx on 11. the signals may not be 5/9+20 like hams like but they were ok. during the last low in the cycle i was still working the caribbean and south america no problems almost everyday. there were very few days with no dx.

I found an old Johnson desk mic at a flea market. It looks like an old
Turner +2 with the Flash Gordon streamline look.
It isn't a power mic though, just a dynamic I assume.
Does anyone know anything about these mics?

President George extra Channels

1)Put power on the george while pressing power+ nb/anl + programm +dimmer.
2)The radio turns on when pressing these 4 buttons.
3)The g turns off after a while pressing the buttons.
4)Release only the power button.
-the g turns on again.release the 3 buttons.
-the dilplay now looks very funny.press 1 times up then 1*down then DW and
then M1.
-the g turns off again.
-turn it on by pressing power,then press DW.

do we wish we had that many freqs to operate on? No. if we wanted to be a 2
meter nerd and talk to others in our area on repeaters then we would go to
radio shack buy a book and study for a day and get our ticket. people are
always making the assumption that cb'ers cant be hams for some reason. the
truth is most do not want to be hams because of the ass holes like you guys
that always show the elitist attitude. 2 meters isnt 8 times bigger because we
operate anywhere between 25 and 28 megahertz anytime we feel like it.

>> 2. they spend way to much time worrying about 11 meters.

you are more stupid than i thought. apparently you have been looking at a short
wave chart since you quoted 11 meters as being 25.67 to 26.10. just by that
simple comment you show you inablility to check things for yourself. this means
everything your here stating and standing for is probably something you heard
you local hambo on the repeater say and your trying to be just like him. it
seems like techs are the only class of hams that come here and act so holly and
i find that funny because most real hams dont even consider a tech to be part
of the amateur world. i guess the hams have too much time on there hands and
spend it worrying about whats going on 120 megahertz below them.

> If you talking about our concern about CB, then we can discuss that.
>We (the "hams") also use the CB occassionally, so we have a right to be
>concerned about it. Enough said.

your a newly liscence technician class ham. hell you cant even talk to hams in other parts of the country or world unless you get some rare vhf dx or work a sattellite for a bout 10 minutes out of every 6 hours so you definetly cant speak for the others. the nerds on your local two meter repeater are not a reflection of real world hams or there opinions.

>Dwight Stewart
>Amateur Radio, Technician
>F.C.C. License: W5NET
>www.qsl.net/w5net

wow thats a pretty official looking signature for a tech. i copy code in my head for fun and to once in a while communicate on 11 with it, i bet your one of those guys upset because you have to learn it. hopefully youll never get it down because a ass hole like you doesnt need to be heard around the world. if you talk to a guy in Z2 land will you tell him to turn down his amp because he's tearing up the band???

this group is free for all to join in but you will soon see that the hams here
have a very negative attitude towards cb'ers. after reading most of the hams
post here your likely to not want to have a liscence.

For Sale in mint condition a Uniden President HR2600. The radio has
never been mobil and I have upgraded it with a new Chipswitch micro.
which allows it to cover the 10,11 and 12 meter band and adds more
memory channels plus the CB band. It is allmode and does 10 watts AM &
FM and 25 on SSB. Comes with box, manual and mobil bracket need to get
225.00. Dave

The real issue is a Ham sending out threating e-mails such as the one
referenced in my first post. If Hollingsworth has a problem with my
operation on the Superbowl then i am prepared to pay the price.
What are you and other Hams doing to clean up your own bands? Nothing i
expect. We have General class license holders here who incite fights on CB
then run up on 146.925 and rebrodcast the transmissions. This information
has been brought to the attention of the club who maintains the repeater. NO
ACTION has been taken. However the same group has members who conduct fox
hunts looking for those awful CBEers. Double standards in action. What i
take issue with is the scare tatics used by people such as Bullon. My
operating habits will not change due to the bulling of this poor pathetic
Ham operator who has to much time on his hands.

The switching power supplies generate a lot of hash on the RX end, so for the skip talkers it really isn't a good idea.

On the shootout side, we usually use a 3 phase transformer being driven directly by the alternator, and from their into the diode stack / caps.

That is simplicity at it's finest, the entire thing is controlled by the alternators then... Rev the engine up, the watts go up. Idle the engine, and you do low watts.

Has been thought about, just not done. Some of the people building boxes I doubt would have the expertise to build a good switcher anyway... Copycat clones.

Dwight, you are an ignorant, misinformed asshole.

Please stop being so damned holy that you continue to spew garbage. Get a book, a calculator and a life because the rest of the world doesn't like to listen to your spew.

Who gives a shit? We have more operators in the CB radio service than you do active amateur operators, and we cram all of us (even the illegals) into 2 megs of space. So, who is wasting spectrum? Why do you think that UPS now owns half of one of your "precious bands"... 2 down, FCC only has a number to sell off... Don't throw stones when your own house is made of glass.

>
> Don't you wish you had that many frequencies to operate on?

I do. I choose to not operate on them because of arrogant asses such as yourself.

> The two meter ham band alone is over eight times larger then the entire
CB band.

And what is your point? The 220 band was also, and it was cut in half because people didn't use it.

Welcome to the real world.... The bankroll rules.

> Its not that hard - get a ham license. But that would mean that you
>would have to obey the rules - something that I just don't think you are
> capable of doing.

A. I have one
B. The original poster has one (both she and her hubby are friends of mine)
C. Why? We seem to have all the fun we need where we are. Why do you feel the need to force people off of CB (when you yourself said that you have that band, too) and onto ham radio? Is it because you feel that without the numbers (of active operators) you feel that you will lose more spectrum to the UPS's of the world?

>

I think you better get that calculator out and do the math.

27 megs is most definately part of the 11 meter band.

Of course, a good amateur operator would know what frequencies encompassed each band, and also know that their is a difference of each bands electrical counterpart, and the "INTERNATIONAL DESIGNATORS OF SHORTWAVE BANDS".

But, then again, all you did was memorize Gordon West's tapes, went down and passed the written and think you are an "elite" radio operator that is a cut above anyone who chooses not to take a test and still partake in a hobby that involves your precious radio, huh?

Stop whining. It is getting old.

No it isn't.

Everytime you double the number of radiators, you effectively double the number of watts.

Let's put this into perspective.

1 antenna = 10dB gain
2 antenna = 13dB gain
4 antenna = 16dB gain

Since every 3 dB gain = double the power, and 10dB is 10X the power with 1 watt in, it works out like this

1 antenna = 10 watts
2 antenna = 20 watts
4 antenna = 40 watts

OK,

I am about to install (finally) an antenna for my base station on a tree near my house. The only thing is that I do not want to have to keep climbing up the tree to adjust the SWR and would like to know of a good way to do it on the ground. Anyone know how to do this? Just hook it up and test or is there some other way that involves me not being close to the antenna? Also, about grounding, whenever I try to calibrate my SWR meter (a Dosy, but hey it was free!) it jumps all around on the scale. Could this be do to some ground fault? I made this test with the antenna placed against the tree and can't really see why it would do this. Thanks it advance!!!!

What a fucking idiot...... Federal statutes will always
have precedence over state and local laws.

The issue here *is* over illegal operation on 11 meters. It's the people who are DOING the illegal operation on 11 meters who keep bringing up the ham bands and saying basically that they operate illegally on 11 meters because they are too childish to operate legally on 11 meters or on any other band.

>The 11-meter band definately has its place in society. It has been
>hugely succesful. It is fine being AM and should be left the way it
>is, except maybe add more channels. Most people don't want to take
>the time and expense to get a ham license just to talk to a bunch of
>anal retentive radio geeks on 2 meters. I have no problem with doing

Ahem...excuse me, didn't you just say the issue here was supposed to be illegal operation on 11 meters? What does your opinion of the people who operate on 2 meters, or anywhere else for that matter, have to do with illegal operation on 11 meters?

>this and talking to people on 2-meters but the greater majority of
>people will not. And if they did, then 2 meters would be just as
>unusable as channel 6 is on 11-meters.

Well, the point of the post you were replying to when you made these comments was precisely that the 2 meter band would NOT be just as unusable as the Toilet Bowl on CB because (1) the 2 meter band is a full 4 Mhz wide, not just a few hundred KHz, and also because (2) the people who operate on 2 meters have a LICENSE and would LOSE that license if they acted on 2 meters the way the jerks on the Toilet Bowl do...and since those people on 2 meters had to EARN those licenses by passing FCC examinations, most (not all, but the vast majority) of the people who have ham tickets value their licenses too much to risk losing those licenses by acting like a Toilet Bowl Commando on 2 meters or anywhere else.

>The 11-meter band fits a certain nitch perfectly. The problem is that
>people are using it outside its design parameters and this is causing
>problems for normal operation. This is a problem with which we should
>be searching for solutions and not bickering about why the 11-meter
>band stinks compared to other ham bands. The two are disjoint.

We already have the solution...round up the knotheads who can't operate according to Part 95 and lock them in cages so they will be in

no position to do any further harm to this portion of the RF spectrum.
These idiots ARE the reason the 11 meter band stinks. Get rid of them,
and the band would be just as enjoyable as 2 meters.

73 and good DX'ing,
John D. Kasupski

wrote:

>sounds like kasupski quoted something out of his radio shack study guide.

I've never even read a ham radio license study guide. Perhaps you
missed it when I posted the story of how I happened to wind up with a
ham ticket.

You see, I'm not a ham who happens to be interested in other facets of
the radio hobby. I'm an SWL who happens to have a ham ticket.

I went to a hamfest this past September to look for an HF receiver to use as a backup to the one I have been using for the past two years or so. While we were there, they were giving the exams and taking walk-ins. One of the guys I went there with, who has a General class ham ticket, joked with me that if I had studied for a month or so before the hamfest, I could walk in there and get a ham ticket.

I replied to him that I could probably pass the written test for a Novice class license without studying, just on the knowledge I have gained from 33 years as an SWL. He laughed. So I made a bet with him. I told him I'd go in and take the test, if I passed it, he paid the $6.30 or whatever, if I flunked, I paid for it...and the loser also had to buy lunch.

We shook on it...I went in, took the Element 2 written test, and passed, as I expected I would. The VE asked if I wanted to take Element 3a. I had nothing to lose at that point, since my buddy was now paying for the test (and lunch) anyway, so I said, yeah, sure, I'll take the Element 3A test.

Much to my surprise, I passed Element 3A also, thus qualifying for a Technician class ham ticket, which was issued by FCC six days later.

So, you could say I got a ham ticket without studying for a single minute...OR you could say I studied for 33 years as an SWL. Either way, I've never seen the inside of a study guide. I learned what I know about radio from 33 years as an SWL, 24 years as a CB operator, and 22 years as a scanner monitor.

The exams are not that difficult...at least not the ones for the entry-level Novice and Technician licenses. I'm told the ones for General, Advanced, and Extra are more difficult. I'll find out about that when I get my code speed up high enough to test for a license upgrade. But the tests for Elements 2 and 3a are not as difficult as some people would have you believe.

73 and good DX'ing,
John D. Kasupski

Condoning unlawfulness? Show me what law makes what I did illegal.
There isn't any, and that's why a lawyer would laugh you knotheads
right out of his or her office.

My thoughts exactly!!!!
rotfl

Oh if he only had a clue!!!

Sounds like old Johny boy here likes guns too!!! BIG GUNS!!!!   oooohhh
don't piss him off. He wants to put

>>a round into your scrotum

whether you have one or not!!

hhhmmmm

And what does old Johny boy really know of the David Koresh and the Freeman
brothers etc.....
You think that blowing a whole in someones anal cavity is fun and enjoyable?
YIKES!!!!
Mommy did hate you huh?

> I am curious: what do "11 Meter DX Groups" do during the low ebb of
> the sunspot cycle (up to 5 years) when the band is open only to local comms?

One reason 10 and 11 are so popular is because of the chance for types

of enhanced propogation not dependent on the sunspot cycle.Sometimes
when the cycle is at the bottom 10/11 are the best bands if only for a
few hours at a time.

Down here on the west coast of Florida the airwaves are trashed during the day. I have to turn the RF gain down 3/4s of the way or else the static has my signal meter pegged. I've noticed that I cant get out as far s I used to either. I've tried different radios and antennas and they all seem to be the same way. It doesn't do it at night so I'm wondering if it could be something todo with the atmosphere??? anyone who knows whats going on I want to hear from.

Thanks
tom

Perhaps the FCC will investigate you if enough people complain of you
illegal jamming activites just enough to cause a No- Code Tech some grief.
is this is your vendetta against the CBers who ran you off the band. Why not
go study the code test seems that you have much time on your hands. BTW, I
feel we should also forward all your post from the newsgroup showing how
your harrasement, and copyright infringent shall also be looked at. The FCC
doesnt take anything too serious that a Tech class licensee has to say
especially after all the posts get forwarded to Mr.Riley showing your
assinine behaviour on the newsgroup. It will show your antagonistic nature
towards us lowely cbers.

Frizz,
 I talk alot on Channel 15 but I noticed my SWRs were a bit higher when I go above channel 40 or if I go very far below channel one so I recently purchased an MFJ-949e Deluxe Versa Tuner for $150 and I use it to bring my SWRs down to 1.1:1 everywhere I go.

  Not only does it seem to help keep my RCi 2970 a bit cooler but it has
dramatically affected my output to some of my regular contacts on some of
those other frequencies.
  The MFJ 949e is usually available from any good CB shop and I feel they
are very much worht the extra money.
 THe MFJ 949e installs in-line on your coax by way of a coax jumper from
your transmitter and is not only very easy to install but also very easy to
operate.
The Smokin' Armadillo

>don't piss him off. He wants to put
>
>>>a round into your scrotum
>
>whether you have one or not!!

I didn't say *I* wanted to do that, I merely presented a hypothetical situation involving unspecified person or persons with an admittedly perverse idea of amusement. My intent was to make the point that your right to enjoy your chosen form of amusement ends when you infringe on the rights of others...which is exactly what you do when you render a frequency totally useless with your illegal equipment and inconsiderate operating practices.

It seems the point was lost due to the fact that I was unaware of your gender; however, if you substitute the word "breasts" for the words "scrotum" and "testicles" in my original statements, then the statements I made will apply in the case of a YL just as the original wording remains valid for an OM.

>And what does old Johny boy really know of the David Koresh and the Freeman
>brothers etc.....

You'd probably be very surprised what I know about such issues. I do not live in a vacuum. However, since my knowledge of those issues really has nothing to do with radio, I will simply say that it's too bad you weren't around when we were debating Waco and Ruby Ridge in the CIVLIB and RTKBA echoes on FidoNet several years ago, or you might understand why the feds were very hesitant to use force against the Montana Freemen.

>You think that blowing a whole in someones anal cavity is fun and enjoyable?

Once again, I did not say that *I* was interested in shooting at you or anyone else. However, you can't blow a hole in a hole...you can only blow a hole in the material surrounding the hole, thus creating either a bigger hole, or a new one next to the existing one. :-)

This would, however, be contrary to generally accepted defensive firearms practices. No defensive firearms instructor that *I* have EVER had the pleasure of learning ANYTHING from has EVER advocated aiming anywhere other than at an adversary's head or the center of the chest, since these are the locations most likely to produce an immediate stop of the adversary. Shooting at an adversary's posterior would be a waste of precious time and valuable ammunition.

All of which, again, has nothing to do with radio. If you wish, we can continue this discussion in another NG where it would be on topic. :-)

73 and good DX'ing,
John D. Kasupski

The assholes a no-coder bwwwaaaahahahahahahahahaha, you have got to be
kidding me, but what do you expect he is a swler and probably just monitor
since no one wants to talk to a dickhead what a friggin imbicile this is how
he wants to make his mark on the ham bands I know I know who needs the code.
Take the easy road out . Why not post your picture on your web page John
this way we can see how big of a dick you really are.

we seen the origanal post and didnt care then and dont care now. anybody with a brain (we dont know how you did it) and basic knowledge of fcc laws and a little theory can pass the tech test. now i'm not sure why somebody would want to talk to other geeks on the repeaters but its not a hard or impressive thing at all.

i can see you with your camo gear on and your ht on your belt ready to go lock up cb'ers for using echo mics and amplifiers. please be real in this board. do you think the fcc can aford to clean up hundred of thousand cb'ers in north amerecia? then what will you say when the dx rolls and we get fm interference from europe(where its legal) or there are spanish stations with huge amps and echos(rules are non exesting or none enforced in south america)? should we send in the army to south america to clean up 11 meters? if one was to read your post alone we would get the idea that trouble on 11 meter are a big problem in this society, not drugs or violence.

Dwight do you really consider yourself a ham, For starters you are a no-coder I personaly don't consider you to be a real ham, Secondly You were issued a license on Aug 3, 1999 How can people think you represent the ham community, you havent even gotten your feet wet , any moron can pass the no-code test it takes a little more apptitude to pass the rest of them perhaps when you are a General, Advanced or an extra we will take you serious. Other than that go cry to someone else who cares

431 It is impossible to talk to someone if propagation is not favorable, I
don't care how many watts you may think you have. If you speak to Mean Pill
then the band is not dead . So what you are saying is you can just key up
your radio and talk to Mr.Gunn when ever you like I dont think so.

Cary: Your microphone cord or plug or even the switch in the microphone may actually be causing the trouble, not the relay itself. Any high resistance connection due to oxidation or ageing may contribute to the trouble you describe. Try a clip lead on the ptt connection at the connector to chassis....as always, exercise caution in the old tube rigs as high voltage is present.

Good Luck
Dave   http://www.retrocom.com

let's stop talking about the idiosyncracies of channel 6 and get down to it.
now, does this wonderful channel 6 , known affectionately by some as the
```

superbowl, and others as the toilet bowl, does it need , i say , i say ,
does it need a flushing. i think so. now is it possible for a human to
purchase one of these duzzies produced by henry? i want one of those 25000
watt, 3cx15000 units. How much are they? Christmas is coming up. Anybody
got a grubstake for ole icm? ,........icm out ....

If we ignore these morons  posts they will go away, They are no Code =
Techs wanting to prove thier worth to the ham communityThe FCC has more =
to worry about such as child porn, frauduelent web site, cellular =
problems, cable companies, Ham bands Why would they worry about 11 =
meters when there licensed hams have screwed up there own bands  with =
profanity, excess power, jamming, pirate radio stations, this is all =
from a group of people who hold FCC  license and are supposed to know =
the rules. The CB band also has its share of hams that come to 11 meters =
and play there games. Your saying this doesnt happen. I beg to differ i =
have seen firsthand many hams running excess power, profanity, and there =
dropping down to the cb band. I have also been licensed for 21 years in =
the amatuer service. Just as on the radio if you ignore the carrier =
throwers etc they will get tired of the one way conversations , if we =
continue to talk and reply to them it feeds thier fire. Let them ramble =
on without a reply they will go away=20

AM 40 channel, based on a version of the EPT-360014B board.

http://www.bills2way.com/equip/nr_100.html

- Single Final installed, room for a second one.
- Like wireless communications Northstar radio's it has a few changes.
- The Front end is based on a different part.
- The board has been made smaller to fit the smaller Cobra 29LTD foot print.
  This was done by using surface mount parts in many areas, but not everywhere.
- The Curcuit mods for modulation that we all know for the DX-33 thru DX-99V
  will still work. No design change here.
- A surface mount transmitter mixer was used, I have no idea why, does not save any space.
- TWO New boards installed on chassis side. One is a Compander, and as far as I can tell
  it is the same thing as the Soundtracker noise system. Is in line in both Xmit and receive
  modes. This is using a "KA8507" IC...?? Anyone have info on this? The other is the
  front panel lighting system. Although not the same as the Cobra NightWatch it is
  close. Not sure whitch one I like better. The NightRiders are a soft blue.
- OK, Now for the bad news. THE PLL. it is a small epoxy potted system. It appears
  to use surface mounted devices, and you can not get to them very easy.
- Modification looks like a crystal switch special to get the extra channels.
  Like those used in the Expo-100 kits.

AM/SSB 40 channel, FULL Sized, based on a version of the EPT-360014B board.

http://www.bills2way.com/equip/nr_150.html

- Single Final installed, room for a second one.
- Like wireless communications Northstar radio's it has a few changes.
- The Front end is based on a different part.
- The board is full sized, very little surface mount.
- The Curcuit mods for modulation that we all know for the DX-33 thru DX-99V
  will still work. No design change here.
- A surface mount transmitter mixer was used, I have no idea why, does not save any space.
  This was also seen in the late run of the Northstar 9000 mobile units.
- TWO New boards installed on chassis side. Same as the above AM chassis.

- PLL and channel selector is again like the above radio.

I use a Astatic SuperSidebanner mic. I have been on the radio for some 25 years and have used many mic's. As far I can tell, this mic is the best. You should try this mic out.

Was the Cherokee AH-100 dropped by the manufacturer? Is so, was it due to defect, or lack of interest?

Thank you,
Ken

My SWL activities consist of shortwave utility station monitoring, especially military stations, and listening to the HF ham bands. Very seldom do I bother with the SW broadcasters - to me they are nothing more than QRM.

By the way, Q signals and terms such as 73, OM, YL, etc. are routinely used by SWLs and widely understood by us. They are not limited to CW by any means.

73 and good DX'ing,
John D. Kasupski

I wish people would use real names.

I have just got back into the hobby, long commute, and I have the following
in my Jeep.

Uniden PC68XL ($114) and the K40 ($70). Having excellent results with both.
Almost
DFQ quality on transmit and receive. I like the quick twist disconnect on
the mag mount.

Greg

Isn't one of the reasons not to have an amp is that you'll blow out any
other drivers speaker when you are near them, which is the most important
range?

I've got a couple of mark 10's and have heard of the mark9 but have
never heard of the moble dak 6 i've got before. It's a 40 ssb radio. Any
other's seen this radio before? I figure it's pretty rare of a model.

Jeff

Hello Frizz: Install the A99 on a length (21 feet, or so) of 1 or 1 1/4 inch pipe. And you can easly raise and lower the A99 to adjust the SWR rings. It should be close enough to be good to go. Make sure the coax comes down the pipe straight, it part of the antenna for about 9 feet or so.

Then I would use this pipe as a mounting mast for the A99 in the tree. Big-Ten-4

Jay in the Mojave.

```
Yeah your HI alright,... John,

Just remember this....WHAT GOES AROUND COMES AROUND!
I hope I am around when you and Rick Bullon <KC5AJX@unicomp.net> get yours.

Have you ever been to a race track and watched cars/dragsters go 300 plus
miles per hour in the 1/4 mile?
If not then we understand your ignorance.  It seems like you need some
education in having a bit of fun in good clean competition.  Go get your
head out of the hole you have put yourself in and come out to the real
world.  Loosen up and for once in your life smile at something.  It might
just change your attitude.
You need a major attitude adjustment.
Get off our high horse and start living like a normal person.

We are not afraid of you or your crony's, so take yourself and your Rick
Bullon <KC5AJX@unicomp.net> and go play in your own sandboxes with your own
toys.
It's a sad day when you try to take someones amusement away.  God will get
you for it!

The good will prevail!!!!

Dude,
Your taking things from my web page that I did NOT give you permission to take.
You are forwarned to cease and desist this action immediately or I will be forced to take legal action against you and sue you.

FYI: I OWN my own ISP so complain away!!!

On another note:
If you have a problem with being called a troll then stop acting like one.

For the information of others....

Hi there:

I have a 1965 Cobra Cam 88. Recently, when I key down the mic. The
transmit/receive relay just pulls down about half way, causing the rig to
oscillate between transmit and receive. If I manually push the relay all
the way down, it goes into transmit fine. I've cleaned the relay to no
avail. Does anyone have any insight into this problem? It doesn't look
like I'd ever be able to find another relay for replacement, short of a
parts rig, so I hope it's something else.
Your thoughts would be appreciated.

Regards,

Cary Fries

In other words, they're too lazy to bother with details like FCC
regulations, so they operate on unauthorized frequencies.

no. in no other words than what he wrote. some just dont want to be ham radio nerds. its that simple. i can copy around 12 words a minute in my head but you wont see me trying to get a liscence. i have 112 countries confirmed direct(without qsl managers and beuros and all those are last cycle with 25 watts and a antron99) right here on 11 meters and have friends over seas that i regularly speak with. theres no reason i can possibly see to become a ham. if i did i may get struck with the awfull disease that makes hams think there better than others. the FCC is not god. its a agency created by our government, nothing more, nothing less. do you go around telling people that litter to watch out or youll take there picture and mail it to the EPA? your little crusade here on this news group is a joke. it will do nothing but cause you to watse your time. for all you know riley hollingsworth could actually be TOLL FREE.

I'm not sure the modulation limiter has anything to do with it interfering with the neighbor's computer speakers. The only way to find out for sure would be to reinstall the modulation limiter and see if the problem went away.

Since you're not using that anyway...thank you for operating legally.

>computer speakers, oh yeah and my antenna is a little higher than rules
>allow 61' to the top.

Actually, I think it's 60' above ground when mounted on a tower, or 20' above a man-made structure such as a building. If you're on top of an 80' building, you can't very well keep your antenna at 60' above ground, so in that case you're allowed 20' above the building. For an 80' building that would be 100' above ground, but still legal. Thus, I don't think anyone's going to quibble much about one foot.

73 and good DX'ing,
John D. Kasupski

The wife and I went for a little drive this morning and stopped at the Flying J truck stop whch is located a few exits down I-10 from our house. After getting a nice slice of pizza we strolled around the store and discovered that all of the Galaxy, Cherokee and Ranger 10 meter radios were no longer being sold there. The only radio products they were Cobra and Uniden. The manager of the store said that didn't know why these products were suddenly removed from inventory last month but these decisions are made at company headquarters. Is this a sign of things to come?

Don't forget about the 20 feet of copper inside that fiberglass antenna housing!!

Yeah, I don't doubt that we won't see you getting a license. You can't
even SPELL "license" let alone qualify for one. And every one of your
112 confirmed contacts is in violation of Part 95, so what are we
supposed to impressed by? Your ability to violate regulations? Your
stupidity at bragging about the fact that you violate regulations? Or
perhaps both?

73 and good DX'ing,

Poor John,
Must be speaking of experience.....the wetting of the pants thing....
I have done the legal thing before to lames like you. I can do it again.
Do you and Rick do it together like this always or is this your first
experience together?
hhhhmmmmm

If that's the best you can do....I have have nothing to worry about!
---buttwipe!!!!----hehehe ---- that in itself just makes me laugh. But be
asured....I will not wet my pants.
Do you enjoy harrassing people? You are all full of hate and discontent
aren't you. Your poor poor thing. Maybe your Mommy did not love you huh?

We will Prevail!

I ended up buying a Uniden Grant XL. Im very happy with it. Its loud
on the TX and the RX has a good noise filter. The SSB performance is
more than satisfactory. The 148GTL by cobra is the same radio, but
costs more, so I went with the Grant.

Good luck.

Why do you people constantly argue back and forth about the virtues of one band over another?

The issue here should be over the illegal use of 11-meters. Not about why a certain licensed band is better than an unlicensed one.

The 11-meter band definately has its place in society. It has been hugely succesful. It is fine being AM and should be left the way it is, except maybe add more channels. Most people don't want to take the time and expense to get a ham license just to talk to a bunch of anal retentive radio geeks on 2 meters. I have no problem with doing this and talking to people on 2-meters but the greater majority of people will not. And if they did, then 2 meters would be just as unusable as channel 6 is on 11-meters.

The 11-meter band fits a certain nitch perfectly. The problem is that people are using it outside its design parameters and this is causing problems for normal operation. This is a problem with which we should be searching for solutions and not bickering about why the 11-meter band stinks compared to other ham bands. The two are disjoint.

If its an Antron-99 its supposed to be factory tuned to the middle of
the 11-meter band so you shouldn't need to tune it at all.

>miles per hour in the 1/4 mile?

Well, I don't know about 300 MPH, but I've been to the races before.

>If not then we understand your ignorance. It seems like you need some
>education in having a bit of fun in good clean competition.

I think YOU need an education in good CLEAN competition.

Dragsters do not violate the rules under which they operate. If they
do, they get disqualified. YOU, on the other hand, DO violate the
regulations under which you are supposed to operate your radio
equipment. That isn't CLEAN competition at all. In fact, it is quite

the opposite.

Ever been to a firing range and watched IDPC shooters put 10 out of 10 in the D-ring from 50 yards all day long? If not, then we understand your ignorance. I'm sure that a bunch of those guys got together and decided to have some good, clean competition to see who could put a round into your scrotum from the greatest distance, you wouldn't object a bit since it's just good, clean competition.

>head out of the hole you have put yourself in and come out to the real
>world. Loosen up and for once in your life smile at something. It might

I'll smile plenty when the FCC removes you and the other morons like you from the airwaves.

>Get off our high horse and start living like a normal person.

If you think it is normal to do what you and your outlaw bunch of morons does, you need to get some professional psychiatric help.

>We are not afraid of you or your crony's, so take yourself and your Rick
>Bullon <KC5AJX@unicomp.net> and go play in your own sandboxes with your own
>toys.

Well, I can't speak for anyone else, but the ARRL does sponsor a Field Day every year. That's when hams go out and play with their toys. The difference is that all of OUR toys are legal, yours aren't.

>It's a sad day when you try to take someones amusement away.

Suppose someone thought it would be amusement to sit about 500 yards away from you with a rifle and see if they could shave the hair off your testicles with a bullet and not draw any blood. How sad do you think it would be when the cops came and took their amusement away from them?

>God will get you for it!

Sure he will...just like he'd get those cops who showed up to keep the guy with the rifle from accidentally turning you into Shadowette.

> The good will prevail!!!!

Yes, I believe we will.

An antenna being mounted that close to a tree may well require some
tuning nevertheless. Also, if the antenna is less than 1/4 wavelength
above the ground, you will have a high SWR reading.

One should also check SWR any time an antenna is installed to make
sure there is no open or shorted connection in the feedline (which on
CB is almost always a coaxial cable), since if there is a feedline
problem, all the tuning of the antenna in the world won't help any.

Geez, do I have to explain *everything* to you people in here?

Since you have the unmitigated audacity to threaten *me* with the law when *you* have a web site that blatantly advocates illegal activities and blatantly traffics in illegal radio equipment, it would serve you right if I simply blew you off by calling you a petulant ass, presumptuous hypocrite, and a few other terms that come to mind, and then let you contribute to your own humiliation by going to visit an attorney - who would undoubtedly laugh you right out of his or her office, then bill you for the time you wasted.

Instead, just this once, I'm going to be a nice guy about it and take the time to explain this to you. I am not, however, going to make a habit of this, so next time, I suggest that you consider finding out something about whatever it is you are shooting your mouth off about BEFORE you go shooting off your mouth (gee, why do I find myself having to say that to so many people in this NG?).

First of all, before an infringement suit may be filed in court, registration with the U.S. Copyright Office is necessary for works of

U.S. origin. That requires that you file a copy of your work with the Library Of Congress, AND a copyright registration with the U.S. Copyright Office..

Got a Library of Congress Catalog Card Number for the content of your web site?

Got a copyright registration number from the U.S. Copyright Office for the content of your web site?

No, of course you don't.

Why not?

Because copyright, a form of intellectual property law, protects original works of authorship such as literary, dramatic, musical, and artistic works - that is, poetry, novels, movies, songs, computer software and architecture. Copyright does not protect facts, ideas, systems, or methods of operation.

You *could* copyright the HTML code you used to publish the pages on your web site. HTML code is generally considered to be a computer program and *can* be protected by copyright. The facts and ideas presented BY that HTML code are another story. Facts and ideas *cannot* be copyrighted.

If you *could* copyright facts and ideas, would it matter anyway?

No, it would not...because under the fair use doctrine of the U.S. copyright statute, it is permissible to use limited portions of a work, including quotes, for purposes such as commentary, criticism, news reporting, and scholarly reports.

Thus, even if you *could* copyright the facts and ideas on your web pages - which you cannot - my use of those facts and ideas would still be permissible *anyway* under fair use doctrine.

Furthermore, if you *could* sue for damages, your ability to sue would extend only to real damages suffered in loss of profit as a direct result of my use of your material. You could not sue for punitive damages because I did not profit financially from the use of that material at all. Since the only business activities that would be affected by my use of the material on your web site are illegal activities to begin with - i.e., trafficking in illegal radio equipment - the damages you would be entitled to recover would amount to exactly ZERO. NADA. NIL. ZIP. And you'd have to pay your own court costs besides...you couldn't even recover those. The cost of paying your attorney would come out of YOUR purse. The cost of filing court documents would come out of YOUR purse. And your suit would be dismissed as frivolous, even if you *could* find an attorney rotten enough to let you actually proceed with such a farce just so he could bill you later and laugh all the way to the bank...leaving you perhaps a little smarter, and definitely a lot poorer.

I'll also point out here that the drivel about only 10 people out of 10,000 being able to be heard on The Toilet Bowl was previously posted in this NG by someone else, and you posted no objection to that use of that material from your web site. I quoted what I quoted for the purpose of commentary and criticism in a letter that was indeed subsequently submitted to an agency of the United States government (i.e. the five appointed FCC Commissioners), a permissible use of that material under fair use doctrine. I then posted a copy of my letter to the FCC in this newsgroup, which is protected free speech under the First Amendment.

If you were stung by the commentary and criticism, that isn't my fault...I didn't tell you to go and utilize your web resources to advocate illegal activities. If you're going to do that, then you should not be surprised when it results in negative publicity. If you want positive publicity, then advocate LEGAL operation on the CB band like the American Eagle Radio Club does on its excellent web site, and I'll be more than happy to provide some positive publicity for you (just like I rather slickly just did for them). But as long as you sit on the wrong side of the fence and continue to support people who ruin the CB band for those of us who operate legally and considerately, you'll find me to be a continual thorn in your foot, so to speak. The choice is yours to make.

73 and good DX'ing,
John D. Kasupski

Well, let's take a look here...

>>73 and good DX'ing,
>>John D. Kasupski
>>KC2FNG, KNY2VS, KJK-14120, KSO-9650, AE279

First of all, we have my real name...which I notice that you and a lot of other people in this NG don't have the guts to insert into the messages that you post. Why is that? Are you ashamed of who you are? Are you afraid that your friends might find out what you're really like? Or do you just have so little respect for your own opinions that you can't even bring yourself to associate your name with them?

Now, on to the callsigns issue.

Hmmm, we have one ham callsign (KC2FNG).

We have one monitor station registry identification number (KNY2VS).

We have two CB callsigns (KJK-14120, current, and KSO-9650, issued by FCC in 1975).

And we have one set of CB sideband numbers (AE279).

I think I've given adequate coverage to CB in my signature lines. Therefore, I must conclude that the only reason that you don't like to see the ham call in their also is that you're jealous because you don't have one too.

Next, I suppose, you'll be whining about the fact that I have my monitor station registry ID number in my signature line, too...and I doubt that you have one of those, either.

73 and good DX'ing,
John D. Kasupski

I don't like noise toys either but don't come on hear crying about them, I also despise roger beeps but have never posted anything about that. I don't like hams who say 73's it is not correct I don't like the 80 meter band because there are people using above legal limit power there and brag about it also, I have heard them "key" up on other operators trying to monopolize the band, maybe you would know these if you had the license to use them. Why does a ham need a 3cx3000a7 when the legal limit is 1500 watts PEP that power can be easily acheived with much less tube size. Other than the duty cycle.

Sounds like RF from the antenna or something else getting into the meter.

The antron should be fine if you follow the instructions that came with it for tip lenghth,leave the rings in the middle.This is a base antenna and much wider than most mobiles so stop worrying and start talking.

Thats BULL,a small CB beam with a real DBD of 6.5 or so could give a 12-20 Watt erp when stacked like you suggest and a better beam like a 4 element long boom with 9.5 DBD would give an erp between 64-70 watts,a long way from 100kw.this same setup driven with 100 watts would yield an erp of 640-700 watts.

What antenna were you thinking of?where and how did you figure this?What are you smoking? Do you know how much a good rotating tower costs?

Mike Lamb in Bozeman MT has a 200' tower with 4 6 element 10M mono-banders on it and uses 1,500 watts,it has been featured in

magazines.
His erp IS over 100,000 watts!

This kinda makes me remember what was going on in '83 in my area. There was a "channel war" between high school kids & old people, wanting to use CH. 34. There was no profanity then, just mimmiking of other ethnic groups other than your own. It was VERY funny & I wish I taped some of the shenanigans! But then as now, no one had the SENSE to get OFF the freq. & GO to another one (both groups had PLENTY of channels they could of gone to). One night, all the young whipper snappers JAMMED the channel. It was UNreal. Those WERE the days !!!! Dave!!!!!

Can you believe this NONSENSE ? Super glued or should I say Stooper glued
together!!!!   How far will these idiot Modulation kit installing nerds go
in ripping off the people ?   I was asked this question the other day.
Haven't seen one yet.
    The BEST CB shops don't put in Mod. kits. They only use Elmer's on wood
!!!
         Dave!!!!

"Every CB is GOOD" is A LIE !   IF it is made in CHINA, it is JUNK !!!   It
is a cheapened up rip off, for what you can sell him instead---QUALITY CB's
made in the Phillipines. IF it says Made in CHINA on the box or back of the
radio, DO NOT buy it OR sell it. Maybe if we had more CB shops with Morals,
we'd get OUR Country back !!!!   IF you buy it, You'll be sorry !!!!!!
Dave!!!!!

sounds like what used to happen around here, there was so much activity such
as this, no one i knew of even talked on or cared about skip or channel 6 ,
etc, there was plenty to do elsewhere, but alas folks are starting to die
and there are no new ones to replace them. there seems to be no groundswell
of interest in this stuff by young folks, oh way, as you say those were the
days. and i do believe they will never be repeated, so be it,.........icm
out......

```

I just started reading this newsgroup today. I've used a CB radio before a couple times on trips with others, but never owned a CB radio until this weekend. I bought a pair of CB handhelds yesterday on a trip back from Detroit with another person who just bought a truck who was following me. So, now I own two 40 channel, 4 watt radios. :-) Too bad they run on AA batteries... :-/

Anyways, I think I want to become a regular user of CB radio, and I was wondering if anyone had any tips or suggestions for me. Right now, all I have is the two handheld radios (which seem to perform pretty decently), but I'm thinking of installing a decent CB unit in my car and possibly getting a base unit. If anyone knows of a good place on the internet for CB supplies, let me know!

```

actually it was God Fathers CB and Electronics he closed down about a
year or more ago and took all the shit with him he still got my radio...
Sammy was the tech and god father(the owner) moved to fla. about a year
and a 1/2 ago I heard he got busted for playing with the girls (or so I
heard) any way Sammy did do good work but there gone now, went the way
of many cb shops.

And hopefully it won't stop there. All amateur radio equipment capable of operating on CBRS frequencies should be removed immediately from all store shelves. Why take a chance that a Kenwood, Icom or Yaesu may fall into the wrong hands? I'm with you 100%...the FCC should not be allowing the sale of any non-type-accepted radio equipment. The public can only be trusted with type-accepted CBRS and FRS radios. Amateur radios should be required to pass type acceptance as well so that there can be no chance that they might accidentally operate on the Citizens Band. No one should ever be allowed to make changes to their equipment since that would void the type acceptance, making use of the radio illegal. The FCC has made it clear that our airwaves are not to be used frivolously...there needs to much more government intervention to ensure that all radio operators have absolutely no fun.

"Kitchen Table Radio" is on channel 21 playing music.. must be a nut!
Only on halloween. I can hear it in Dallas TX. They advertise their
web site at http://www.fortunecity.com/skyscraper/redmond/699/

What's so funny is the fake microsoft commercials they air.

Ask Gunn about the times we have done some fat mouthing at 2:00am with NO
conditions.
Have you ever checked the various bands for DX to find it dead as a door
nail except for the bowl. Talking out of conditions is also done by many of
the superstars. After i got back from Hot Springs last year Gunn and i were
bumping down. After about fifteen minutes the Buck Eye came in. Loud as hell
were these brothers. Gunn let them come in real solid then dropped the maul.
Now Gunn had NO conditions. It was raw power. As i said you can manipulate
the conditions.

Sure don't, but I have one, too. It is sort of a gold brown color. It
is definetly non amplified, and looks like a turner. I have an old
Realistic powered desk mike that is a black plastic that looks
identical. Jon.

CB's are great fun. One rule of thumb I always try to get through to new
people is that you should never believe everything you hear on a CB radio
and don't pay attention to the lame idiots out there. There are a lot of
them...
Have fun!!

well i was going to say that power is power and raw power will get you far , conditions or no conditions, speaking of the ionosphere is concerned. now if you got a big strappin radio setup and the channel is clear, heck, there is no tellin how far you can talk. even with a little power and no conditions and a clear channel, a lot of times talking a hundred miles would not be unheard of. oh the signal would be faint but it would be there and you could hear it and understand it, but with a lot of power , well , the possbilities would be endless,........

Ray wrote in message ...

hey what is wrong with owning a kenwood, icom or yaesu radio,.......icm
out.........
cbrs@webtv.net wrote in message
<20727-381CDD9E-64@storefull-122.bryant.webtv.net>...
And hopefully it won't stop there. All amateur radio equipment capable
of operating on CBRS frequencies should be removed immediately from all
store shelves. Why take a chance that a Kenwood, Icom or Yaesu may fall
into the wrong hands? I'm with you 100%...the FCC should not be allowing
the sale of any non-type-accepted radio equipment. The public can only
be trusted with type-accepted CBRS and FRS radios. Amateur radios should
be required to pass type acceptance as well so that there can be no
chance that they might accidentally operate on the Citizens Band. No one
should ever be allowed to make changes to their equipment since that
would void the type acceptance, making use of the radio illegal. The FCC
has made it clear that our airwaves are not to be used
frivolously...there needs to much more government intervention to ensure
that all  radio operators have absolutely no fun.

Pls check an d confirm this

- while pressing NB/ANL and PROGRAM and DIMMER, press POWER

- continue pressing all four buttons until the radio
  turns off

- release only the power button; the radio will
  turn on again

- release NB/ANL and PROGRAM and DIMMER; funny display

- press _in sequence_[?] (UP), (DOWN), DW, and M1.
  [not sure of this step]; the radio will turn off [?]

- to turn on, press POWER, then press DW

Does this mean you turn it on with POWER+DW only once the
next time you turn it on or does it wake up 28MHz ssb every
time an d you always have to press DW?

Thanks

Not into my receiver, the Big Horn had the NY/NJ/Pa area locked down. Who
did you say you were anyhow?

ray, If you were able to talk it was because you had some type of conditions
plain and simple, not sure where your located either,  Now that doesnt mean
they have to be the best of conditions where it is a solid 20-30 db in your
duck pluckin receive, You nor anyone out here can dictate when mother nature
is in your favor, if that is the case I want you to get on there right now
and talk to everyone in all 50 states, you did say you can manipulate
conditions. Most of our longe range communications come from the F-Layer in
the ionsphere this you cannot manipulate, certain times of the day and night
your signal gets absorbed by the ionsphere and the different layers  and
your signal never makes it back down to Earth again lending to "No
Conditions" no matter how many watts you have on 11meters

The "American Eagle Single Side-Band CB'er's Club" (A.E.) is simply a group of sidebanders who enjoy the hobby of radio. We are NOT "FREEBANDERS, AGITATORS, or anything else. We generally operate on 27.385 or 27.395 LSB. Before you decide to chastise the "club", please feel free to check it out yourself. And maybe even join! They're at http://members.tripod.com/~eagle217/americaneagle.html Also, the monthly publication "Sporadic Waves" is simply a publication geared to sideband radio operators. Get a copy and see for yourself!

MIKE (707)

Also... there are TWO A.E. clubs. One is the "AMERICAN EAGLE SINGLE SIDEBAND
CB'ers CLUB out of Chester, MA., and the OTHER one is the "AMERICAN EAGLE
CLUB" based out of Boston, MA.

Man you are realy something, Explain to the group how an Antron's match would be affected by being close to the earth. You can take a 3 element beam and stand it on end, aiming up into the sky and tune the match and get real close by doing this, so once again you are the only one impressed, You know you can have a amateur lisense and still be a mudduck, and you sir have proved this point.

John your so smart,
  Try to rip CBer's apart,
    Open your mouth you fart,
       And its picking your brain!

I told you back when,
  That if you do this again,
     I'll get under your skin,
       Now lower your arm, give me a vein!

Pull down your nose.
 And you won't get the DOSE!

Hi everyone,

I need some experience here... My wife and I are going to be making a long move soon in two cars and need to stay in touch. So I went to Wal Mart and bought a set of 2 uniden CB's thinking they'd do the trick. I don't need anything fancy after all. Well, I put in the batteries, hooked up the little rubber antennas and got exactly 100 feet away from my wifes car before we started breaking up. I know the stuff I bought is crap and is going back to the store tomorrow, or maybe getting a bigger antenna, but I also don't want to spend a fortune on this one long trip. Can anyone advise me on a Cheap but functional radio, that will give me at least 1 mile of good clarity from one vehicle to another? I appreciate any help in advance. Thanx!

~Pete~

PS: I'm trying to stay under $150 total (two radios).

For what? What have I pushed a little to for?

Wait.. You probably meant "FAR". Forgot, I have to put my idiot translator
on.

> you are starting to spit out racial insults

Racial? I think not. I am white, and I think that you seem to fit the
stereotype of living in a hovel, having at least one non-running vehicle out
front, maybe another out back, might just have it up on cinder-blocks.

Racial, no.... Stating opinion, yes.

> i do not care for such stuff hear if you are that obsessed with cb

This is another one of your sentences that makes no sense. Please...

> i should just let you be

Your right. I have a hard time deciphering what you are saying, and it is
hard for me to battle someone that makes no sense.

> because you are evidently not on stable ground

Hoo hoo... That is funny.

> just ask if this is worth freaking out about

To which "this" are you referring to? Yet another sentence that makes no sense.

>
> and personally the way you act actually has me thinking
> you are not someone to be bother because you
> get way to emotional over things

I think I see what you are trying to say, but not clearly as far as what you have written. Idiot-in-a-box to English translator recited:

I think that you are not someone to bother with because you get way too emotional over things....

Yeah, right. Please don't attempt to flatter yourself by thinking that I get emotional over you.

Definately not.

>
> like my brother in law you get him mad
> he starts punching the walls so i have found

Because of ease of modifiability.

That is the same reason that they have not brought another to replace it.

Funny...

I have held an amateur call longer than you, and you still post BS like this.

I think that you better learn how the rest of the hobby works before you continue to spew, as you have not been involved in amateur radio long enough (judging by the length you have held your ENTRY level ticket) to even have a modicum of a clue as to what really goes on.

When you are ready to step up, we are waiting.

Howdy!

I dunno about amps for radios as I'm learning all about this stuff, but have spent alot of time [and money] in dealing with high-end audio amps. As such, it should be pretty easy to tell the clean ones from the dirty ones by simply studying the specs carefully.

Now, when you found comparable audio amps, us audio guys would give them all a "test listen," and let the subjective differences [and our wallets] guide the decision. In this case, if you find some comparable units, I'd buy on price as "radio" in general is not high-end audio.

.....just my 2 Lincolns......

Best Regards,
Jay

They are the same, sans the echo and other "toys".

The Ranger has a digital VFO on it to compensate.

So I went to Wal Mart and bought a set of 2 uniden CB's thinking they'd do the trick. I don't need anything fancy after all. Well, I put in the batteries, hooked up the little rubber antennas and got exactly 100 feet away from my wifes car before we started breaking up. I know the stuff I bought is crap and is going back to the store tomorrow, or maybe getting a bigger antenna, but I also don't want to spend a fortune on this one long trip. Can anyone advise me on a Cheap but functional radio, that will give me at least 1 mile of good clarity from one vehicle to another? I appreciate any help in advance.

Huh... I just bought the same pair of handhelds as you did yesterday, and me and a friend following me used them for over seven hours on the interstate, in town, and on open country roads with little or no problems, as long as he was within 1/4 mile. The Uniden Pro340XL, right? These things EAT batteries, so I'd suggest buying nothing less than a very high quality alkaline battery (Duracell Ultra would work great). Once the batteries start to go, the operating range goes downhill quickly. Even after five hours of use on the batteries, we were still able to chat to each other within '100 feet, inside of our vehicles.

You probably need a CB antenna located outside of the vehicle for what you
want to do. You might be able to use your handhelds with an external antenna
if you can get one with the right connector (BNC). Otherwise, you should be
able to buy some cheap CB radios from Wal-Mart or Radio Shack with external
antennas for under $150, easily.

Toll, I am wondering what old johhny Boy is doing to clean up the ham bands since as you know hams police themselves and john is the RF police, and an entry level ham. maybe this is how he is making his bones, I think someone told him If he cleans up 11 meters they will let him pass the 5 wpm code test at the next big hamfest in the niagra falls area.

.

If you had the chance to run a 1/4 wave or a 1/2 wave on your mobile which
would it be? a 1/4 wave antenna mounted on top of a vehicle will beat its
smaller counterpart every time.  Who cares by how much a 7' ft antenna is
not much differance compared to a 9 ft antenna(1/4 wave) lets here how
scientific your test was conducted.

The difference with the 80 meter band and cb is they are supposed to be radios elite operators, who are licensed by the FCC the Extras,the advanced and the Generals. Cb operators and hams are no different other than a license
With a cb a few hundred bucks maximum for a radio is all thats needed why spend the thousands of dollars to hear and try to talk to the elite hams on this band. At least on Cb i expect this we are lowlife scumbags that are on welfare, poor upbringing and If we werent talking on a cb perhaps we would be robbing banks selling crack cocaine or otherwise doing something far more worse than running excess power or having some fun with the local channel. I would be more worried about the child molestors in AOL's chat rooms than a person on the cb tlking on 27.555 Some people need to get there prioritys in order.

Radio Dude ,

I would watch Ebay.com, and your local swap meets. You would be surprise at what might show up. I hope you filled out a police report too. Don't forget to claim that on your taxes as a unrecoverable loss also.

Its hard to believe but it seems to be the world we live in. I would invest in a good security system or a real big dog. One that will eat anyone. At least then you would know who it was.

Good luck,
Ken W.

There's nothing wrong with owning a Kenwood, Yaesu or Icom, just as there is also nothing wrong with owning a Galaxy, Cherokee or Ranger radio. Hopefully these radios were pulled because they were poor sellers and not because of threats from over-zealous and mis-informed rule enforcers. I have heard the same stories as everyone else of radio shops being visited by FCC agents who have tried to confiscate equipment which did not violate any regulations. It would seem that the manufacturers of the radios in question should be informed if their products don't meet FCC standards. Harassing retailers doesn't seem like the right approach.

Howdy:

I've got a basically brand new Cobra 75 WX ST that I installed about a week
ago that I need to sell. Quite simply, it doesn't fit my application all
too well...

First, know that this is an all in one unit with a very small "brain" that's
about 1in x 3in that you can hide anywhere. It's well suited to almost any
vehicle. Here's a picture:

    http://www.bills2way.com/equip/images/c_75wxst.jpg

I really have only two gripes with this unit:

1. I drive a diesel truck and the small speaker in the handset is not loud enough for me to hear over the roar of the engine at highway speeds. If I open the window, forget it. Moral of the story, don't run a diesel with this little guy -- if you've got a gasser you're fine. I _would_ add an external speaker & forego the loss on investment, but just don't like the looks of 'em, nor do I really have a decent mounting spot -- I basically need something with a front-firing speaker that aims at me.

2. I have small hands and can't seem to get my hand around the unit well enough to adjust volume on the one side and hit the PTT button on the other. Anybody with normal size hands will be fine with this, but I don't like shifting my hand on the handset all the time. Call it a pet peeve.....

Some will recall my static and noise complaint the other day. With the help of a local CB shop we traced that to ground noise and a poor squelch setting, so I can't in any way fault this Cobra unit. In fact, if it weren't for the above factors, I'd keep it as it fits the "installation" of the other gear I have in my truck to a "tee." Oh well...

I paid $89.99 [List Price of $119] from Bills 2 Way, plus shipping [talk abo; a wierd shipping charge calculation BTW]. I have everything for this unit, all documentation, wiring & mounting hardware, except for a few screws I lost for the Mic mounting bracket -- I used some screws from my "coffee can," and I'm sure you can do the same.

I'm looking for $70.00 [money order] plus freight, and it's yours -- not bad for what's essentially a barely used CB.

You can respond here, but I will get back to you quicker if you contact me via email.

Best Regards,
Jay

Hi To All,

I was wondering what is a good small amp for a car, Nothing powerful just 50-100 W.

I travel in areas of a sparse nature. And although I can here people out in the background, no matter how load I shout at my power mike . They don't here me. So I figured it might ba a good idea to ask some of the experts out there. Now I have a small car so I don't want something that sticks out. And nothing that I would need a second alternator for. Just bit of a boost.

Thanks

Ken.

snip

I believe that's what he said. Read below.

Snip
>>>was above all
>>>others on RX except a 1/2" x 107" copper pipe.
Snip

Isn't the above a full length 1/4 wave?

A stainless steel 1/4 wave is not as effective as a theoretical
1/4 wave. That is why it can be beat. Stainless steel only has
3% of the conductivity of copper. A stainless whip is much smaller
in diameter than most of the shortened 1/4 waves that marginally
beat it. Most of these shortened hefty 1/4 waves do not fold back
with wind speed. The 1/4 wave stainless does. At 45 degrees it
has only 70% of its vertical field strength.

I still would like you to explain how she does this? And how does a key down do this any more than your field day would?
Do you not think your neighbor gets sick of looking at your SW antennas and longwires, he probably gets pretty upset with the fact the you are a gun nut who makes comments to females a bout shooting them in the scrotum.
You might feel like a goody two shoes and maybe even look the such, but it very obvious that what you do is very annoying, and not very manly either, I picture you as the type of person who has probably hit a female or thought about it numerous times, also are you licensed to carry a handgun (if you do) and if so have you ever broke the law in doing any of this firearm stuff you are so fond of?
Firearms pose more of a threat than a CB amplifier could ever come close to causing, and you are probably one of those dudes that bitch because the government is trying to limit the rights of gun owners and gun buyers< I bet if you really ask yourself if you agree with all of the gun laws there would be a few that you wish they would change so that what you do would not be illegal, you sir are a nitwit, and if you are a grown man would you please try to act like one, I still cannot get over the fact that you would say some of the things you say to a lady, I know Shadow personally and even if I disagreed with her web page I would have a hard time not liking her, you sir apparently do not understand the meaning of "benefit of the doubt".
I personally think you SUCK asshole, be man and grow up. I to have been

saving all of your post's and am going to forward every single one of them to who needs to see them, care if you want to because your opinion isn't shit to me!

Sorry Holihan, You cannot compare the 2 robbing someone or selling drugs or whatever is far away more harmful than any CB related activity. I personally feel no more a criminal than you do because i like big amplifiers, perhaps you exceed the speed limity on occasion or maybe you like to throw a few cold ones back and get behind the wheel at a .08 +/- I have yet to see any man who is perfect who goes thru life without bending some rule along the line, yourself or Johny Boy Kaspsiski included. Which would you rather have 3 murderers and 2 rapist, and 1 muggers live in your neighborhood or a guy who goes on the freebands, please get a clue Do you understand why the FCC has declared it a low priority because they dont give a shit about the cb band not many peoples lives are affected by the cb radio being in the state that it is even with all the Rules governing them the only persons lives who seem to be affected are 2 people yourself and John Kaspksisiksis.
Get real

The basic idea I have in mind is to find (or possibly write myself in VB) a program that keeps a contact database, and has a function to calc the beam heading and distance given my lattitude and longitude and the that of the target location.

Any and all amplifiers are illegal. A radio that transmits more than 4
watts is illegal. Wit all that BS aside, work on a good antenna first, like
a Wilson 1000 (I am assuming you dont wish to modify your car with holes).
A do yourself a favor if you get that Wilson, dont place anything in between
it and your trunk or wherever you decide to stick it. Wash your car, plop
it on and you wont have to worry about scratching it. If you have a decent
antenna, then get yourself a little modulator by texas star, it'll give you
a little boost. You really have to describe your radio, antenna, type of
car, and how much you are willing to spend before anyone can give you a
specific answer, other than those who are anti-linear, they will just shunt
you out either way (they tend to get too specific).

Hank

Hi,
I wanted to maybe fill you in on how an ADSL curcuit works.

ADSL curcuit is a asymmetrical data channel using Discrete Multitone modulation. Meaning it sends and recieves its data of multipule frequencies. The freq range for just the data side is Upstream data (Sending) using 20khz - 138khz, downstream data (recieving) above 140 khz - 1.1 Mhz. So you see the majority of the signal is BELOW the heavy HF frequencies. Each frequency is broken up into 256 bits, and the system fits as much info. into what it can for any given moment. So if you interfere with a signal the most you are going to cuase is a retransmit of the data. Well this is happening so fast, it won't matter to much.

Although the author of the artical is bring out a good point. The companies out there know what noise to look out for, so they try to stay away from it as much as possible.

Now think about this, How much noise do you hear when you turn on a floresent light or a TV. Now understandably anything that transmits enough power will have harmonics no matter what it is. Computers, cellulars, TV's Cordless phones, etc. It all depends on 1. Power, 2. Proximity, 3. The type of signal, or modulation.

So the next time anyone out there cranks up that echo mic, or power mic, after there radio was just. peeked and tweek. Think about a unsheilded telephone line, or Audio video equip. . I know about it, I bleed on my on TV, they just don't make good RCA jacks any more.

Just a thought!

Ken.

Dave,

It depends on money... You can spend alot or alittle, But I think One of the nice ones is the Uniden Grant XL or Cobra has a few nice one and they range in size and price. It all depends on what you want. If you look at your local phone book under radio repair, or Cb radios you might find something , Otherwise shop around at Radio shack, Wal-mart, Or some of the other Electronic Stores in your area. You can look for them on the web to. There are 1000's or cb's shops out there onthe net and they show you pictures and spec. on everthing.

Good huinting, Oh and I am kindaa partical to Cobras my self, especially the older radios, Oh Don't forget about swap meets and garage sales.

Have fun,
Ken

Hi Chris,

I have a wilson 1000, and let me tell you, its been a great investment. I have a mazda 323, and a Cobra 138 XLR, When I took my old chicken shack cheapy off and put that wilson on it was a brand new world.

The wilson is build with the same Idea that K40 used. But it will handle more power, if your into that. But it will suck in a signal that your regular car antenna won't and it handles the transmit very well also. I picked up a few S units to all the stations I talk to.

It will shoot skip with the best of them "BAREFOOTED".

Well the best advise I have is try one. Match it up. And if you don't like it after a week . Take it back.

There you go,
Happy to help.
Ken w.

ok now i have this guy figured. i should have known your an AE member. just so everybody knows AE is a free band group that he readily admitted to being a member of. anybody from 11 meters knows about AE01 TOM in Rhode Island and his friend across the atlantic Ae111 Roy. those guys are the two most foul mouthed, linear running stations youll ever hear on the freebands. Mr Kasupski you can try to pull all the bullshit you want but i know my freeband and the different groups on it. you would not be a AE member if you werent on the freeband at one time or another.

>And we have one set of CB sideband numbers (AE279).

>see the ham call in their also is that you're jealous because you
>don't have one too.

jealous of a tech class liscence? no not me. how many dxcc do you have on 50 megs and higher? i enjoy talking to people in far away places, not communicating with nerds on a repeater.

your monitor ID doesnt matter and you old Cb calls are irrelevent too. like i said before on this news group we are all equal. ham calls or any other like it doesnt make a bit of difference here.

>>>73 and good DX'ing,
John D. Kasupski
KC2FNG, KNY2VS, KJK-14120, KSO-9650, AE279

And we have one set of CB sideband numbers (AE279).<<<

The AE Dx group is a freeband organization. you dont have to take my word for it just tune around and listen on 11. they are not a very big group so you dont hear members daily but almost everybody is familiar with the rantings of AE01 Tom in Rhode Island and AE111 Roy across the atlantic and the Sporadic waves magazine that focuses on illegal freebanding and is published by a fellow AE member. The AE group is known for causing any type trouble they can so i guess kasupskis just doing it here now. AE01 and AE111 are worse than the crap on 3950 except they do it all on 11 meters, cursing, carriers, and all. Kasupski is a troll, plain and simple. he's talking about following regulations according to part 95 yet he blatently associates his self with freebanders??? why not go try to clean up your own club before worrying what people you have nothing to do.

Oh Brother.

Wake up and smell the production line. Nothing is made in America. CB's haven't been made except in China and Maylasia for the past 3 years. So I suppose we will all just close our doors and stop selling Everything.

Its the same sweat shops putting together at less than 50 cents an hour and there is nothing that we can do to stop it. It is not in our control

Make sure you look at all the parts that put put you around on the highways. Oh. And that computer your typing on. MMMM Wonder where that was put together or the parts bought to put it together. Morals have nothing to do with it.

Whew. Sorry had to get that off my chest.
We work very hard to be fair to our customers. At least I didn't say it would suit everyones needs.

Every CB does have a purpose.

Happy CBing and chatting. Sharing idea's is what learning is all about. When you shut off hearing you shut out learning. I hear you and will make it a point to try to find American made CB's and components.

Just have someone hold the Antron in the air overhead out in your open yard. It does not need a ground plane to work properly. Check the match, and it should be just fine before you install it in the tree.

If you don't like the 80 meter band because of the reasons you state
above, then you must not like anything about cb because you just
described the entire cb band as well.

To those whom have claimed the 102" whip is the beat all end all because that's what the books tell you, think again....................
Last night we tested many antennas. To make a long story short, the Valor 60" "HalfBreed" antenna was within 2% of the performance (under) the 102". What beat it? A 7' Skipshooter tied with TX and beat it on RX, and (no way) the Wilson 5000 beat it hands down on both TX and equaled it on RX. Was there anything better than the Wilson 5k? Yes, a homebrew SINGLE COIL aluminum mobile antenna, about 60" tall, edged out the Wilson on TX, and was above all others on RX except a 1/2" x 107" copper pipe.
Want something cheap and unobtrusive that works? 60" Half Breed
Want something that works a little better? Wilson 5000
Want the best? Get one of those big ass aluminum coils.

Where can you get a replacement microphone for those things? My stepdad is a ham (W0PDI) and I'd like to get one for him, along with a mobile antenna. He has been kind of quiet on the bands since he and my mom sold the house in Florida with the 85-foot crank-up and 5-element beam. Man, what a signal that thing would put out, even "barefoot"!

i have a copy of the sporadic waves. it list a lot of info on illegal channel mods and many illegal ssb nets and is put out very professionally by a AE member. do not get me wrong, i'm not against this group or any freebanding because i do the same but i find it ironic that kusupski admitts to being a member of this group but chastises others here on this group. no matter what you say i hear the AE members on the freeband. you didnt answer to the statements about AE01 and AE111. are you in the same group as these guys? if so its definetly a freeband group with more than its share of trouble makers. the group i am referring to is http://freespace.vigin.net/dx.dx/american_eskimos.html

PROBLEM: Can't honestly justify illegal/selfish/inconsiderate behavior on CB radio.

SOLUTION: Search desperately for ways to discredit those who disagree with you.

But that is not what is being discussed the majority of time on this
newsgroup. Most of the time its a ham telling a CBer how stupid he or
she is for not getting their ham license and talking to the wonderful
people on 2/10/80 meters when we all know that the people using CB
have no desire to talk to hams. And this is exactly what the CB band
was made for, local comms between people and businesses who don't
want a ham license.

>>The 11-meter band definately has its place in society. It has been

>to do with illegal operation on 11 meters?

My opinion has to do with the fact that instead of hams telling CBers to get their ham licenses so they can then operate with high power, which we know the CB operator does not want to do (get their ham license), how about the ham operator explaining to the CBer how to operate legally, and why they should. And then, when the CB operator ignores or disrespects the ham operator, the ham operator can leave the newsgroup and be done with it.

>>this and talking to people on 2-meters but the greater majority of

>meters or anywhere else.

I'm sorry, but if every CB operator got a tech license and moved to 2-meters, there would be exactly the same type of jamming and cussing, and rudeness that is found on channel 6. There would be way to many operators to enforce any kind of control over the band, especially if they didn't use their callsigns. This will obviously never happen, and I only said this to try to show how ludicrous it is for hams to come on this newsgroup and tell CB operators that they should stop being dumb, and get their ham license.

>>The 11-meter band fits a certain nitch perfectly. The problem is that

From over 20 years of operating various FT101E, EE and EX models, I will
stand by what I said. It may be better than the run-of-the-mill CB radio,
if you have the rf speach processor, but it is NOT a good AM rig. The
Drakes and early Kenwood rigs were much better.

I never had an AM board for my FT101ZD - so don't know how it would have
compared.

Nope. No rig that I know of will put out enough audio power to blow the speaker.

If you tied the two antennas together, then you might blow a diode in the front end.

I doubt if there is that much of a threat. The major problem with HF is the high noise level. It causes problems with unlicensed low power wireless devices. It also requires rather large antennas to get any useful range.

With the opening of the various GHz bands, and low cost solid state component availability, I would expect most of such devices to operate there. If not, then in various of the government bands - as secondary users.

Let me set the scenario first. I have a small compact car with the antenna on the trunk. SWR is perfect 1:1. The antenna is a half home built, half store bought (MY antenna). I tried Wilsons and others but this works better. I don't want a huge antenna, and this one is only around 5 feet tall. It is essentially a center loaded antenna, with an open coil. The coil is just above the roof of the car, and it's about 2 inches in diameter using apporx 10ga wire for the coil. Alright now for the technical questions. Everyone says a 102" whip is the best overall antenna. I can usually catch some skip with MY antenna so I decided to borrow a whip to use in my driveway for better skip. When I removed MY antenna and screwed in the whip (fiberglass) I lost damn near every signal I had. I was catching some locals on the way home and out where I live the signal drops off pretty good, but you can still make contact. I had a good signal with MY antenna, but just barely could catch the locals in the background noise with the whip. I thought maybe this guy killed his antenna somehow, so I got another. This time stainless steel. Guess what same results. In either case I didn't try transmitting becasue SWR was whacked from being on the trunk, but from losing the signal it wasn't even worth trying. So to all of you techs out there why did this happen? It's not a big deal I guess, but it goeas against everything everyone says. If for some reason MY home built works better than a whip, I think I'm gonna be rich!!! Let me know what you think, and if you guys want me to try something else I will. I want to do a little research on this, I'm sure others will too.

My first antenna was a K40. Then I played around with a 5' Firestik II, Antron 1700, and a big ass double coil X-terminator. Not one was any

better than my original K40. Now I'm thinking about getting a Wilson
1000 magmount and calling it quits. Is the 1000 worth buying? How does
it compare to the K40 in regards to transmitting and receiving? Will it
handle 26 to 28 mhz and still retain a low SWR? Thanks.

That's about the truth! I just rigged up one of my handhelds with a cigarette lighter power cord, and bought a $10 antenna from Wal-Mart tonight. Switched ends on the antenna, and wired up the power cord to the CB, and voila! I was impressed at the range I got with this setup... I could listen for about 5 miles, and talk to people within 2 miles easily, and very clearly. All for under $50.

I guess I'll play with these handhelds for a while, and then pick up a mobile CB unit and decent antenna later.

Danno

Of course they do. And I never said they didn't. I said the local law enforcment officials charging "illegal" operators with violating local statutes that are not based on the actual use of the radio (hince does not fall under federal jurisdiction).

I'll try to explain this again. When you play your music sterio too loudly, you are not charged with playing a sterio, you are charged with disturbing the peace.   The same priciple can be applied to radio. You are not charged with operating a radio illegally, you are charged with "depriving" the neighboring homeowner "of the peaceful enjoyment of his/her property" (words often used in connection with disturbing the peace statutes).

I have never claimed that I am an "elite" anything. I have never used that word in this newsgroup, and never would.

And I have already stated the reasons that I visit this newsgroup - I also own a CB radio and am therefore interested in what is discussed here.

Try again, Tim. I have never said that I don't like the CB band. I have said that I don't like the illegal activities on that band, but nothing against the band itself. Please don't try to twist my words to support your opinions.

You dismiss the entire body of 2 meter ham operators by describing them as nerds and then have the nerve to say that _WE_ have an elitist attitude?

> 2 meters isnt 8 times bigger because we
> operate anywhere between 25 and 28 megahertz anytime we feel like it.

Of course, I could point out that the use of those extra frequencies is illegal but, for the sake of argument, I won't. Even with those frequencies, the 2 meter band alone is still larger. And, in addition, we also have the 6 meter band, the 1.25 meter band, the 70 cm band, the 33 cm band, and the 23 cm band. And that is not even counting the entire selection of HF bands.

And, even with all this, we still can use the CB band also. And this fact alone does not support your argument above (the argument that you don't want to get a ticket because you would have to talk to others on a repeater). If you got your ticket, you would be able to participate in many different radio modes, frequencies, and methods. And you would still be able to talk with your friends on CB as well.

You're not losing anything by getting a ham license. And you are gaining a wealth of other capabilities. Anyone who would pass all that up just so they can use an illegal linear, and play with noise toys, is a damn fool.

A pair of stacked 4's wouldn't need a rotating tower as you put it. A Ham IV rotator would do the trick just fine. If you were in a high wind area you could use thrust bearings to keep the weight of the antenna off the rotator. Stacked threes are light enough that even the CDE 45 with the wedge break module added would do fine. Again use thrust bearings if in really high wind area.

There was a fellow in the local area (he went silent key recently) who had a pair of the Maco Laser 400's stacked side by side. He was using the "Tailtwister" rotator without thrust bearings or any other extra bracing and had no trouble at all turning that hugh array around (boom length approaching 40' or so for one of the two beams)

> Please stop being so damned holy that you continue to spew garbage. Get a book, a calculator and a life because the rest of the world doesn't like to listen to your spew.

First of all Toll, you do not speak for the "rest of the world." You might not like what I say, but you are certainly not the "rest of the world." In fact, considering the huge backlash against CB operators in this country, it is fairly obvious that CB has very little support left in the this country.

And that is exactly why I am arguing that the "illegal" crap has to end. If not, new federal laws, now and in the future, will allow local governments to regulate CB operators right out of existence.

> Who gives a shit? We have more operators in the CB radio service than you do active amateur operators, and we cram all of us (even the illegals) into 2 megs of space. So, who is wasting spectrum? Why do you think that UPS now owns half of one of your "precious bands"... 2 down, FCC only has a number to sell off... Don't throw stones when your own house is made of glass.

Man, you guys keep harping on the loss of a few frequencies. Years ago ham radio lost a few frequencies because ham operators didn't use them. So what? If they were not used, they obviously didn't have much value to ham operators. The government should have given them to someone that did value them.

All of that does not, even for a moment, suggest that our commonly used bands are threatened. Ham radio is not going to disappear anytime soon. And neither is our allocation of radio frequencies.

> C. Why? We seem to have all the fun we need where we are. Why do you feel
> the need to force people off of CB (when you yourself said that you have
> that band, too) and onto ham radio? <snip>

When have I ever tried to "force people off of CB?" I have repeatedly said that a person with a ham license can also continue to use CB, so is not losing a thing.

I'm not asking anyone to choose between CB and Ham radio. I'm urging people to add the new capabilities they would gain through Ham radio to the existing capabilities they already have with CB.

I simply cannot understand why you would find that idea so objectionable.

Dwight, I know the passion for radio you have as I have it too. I guess I have gotten callused to the way CB is and can't see the forrest for the trees. I still have the choice to turn it off or change the channel. That is what those knobs are for. I don't expect others to conform to the way I see things. There are things I can do to take matters into my own hands without the participation of anyone else. I can talk as far as I want right now. The only limitations I have are on the RX. How do I hear better? Let's see, First we'll do the High-gain antenna thing (You know the kind that falls three houses over on the lady that always complains), next, you assign yourself a covert mission to infiltrate your local hamfest and bring back one of those $400 H.F. receivers. After I've done all this work I realize I still have 39 more channels! If this does not work then I put it in the "poor conditions" basket and turn the whole thing off!

First of all, we're doing a lot to clean up our own bands. Pop over to the ham newsgroups to see the great many messages complaining about the bullcrap happening on certain ham bands. Hollingsworth himself has said that the FCC has received hundreds of complaints from Amateur radio operators complaining about the actions of other Amateur Radio operators, and urging the FCC to enforce the regulations better on the ham bands.

We also have a group of people (myself included) that is concerned that this enforcement action may go overboard. While we want enforcement, we don't want to see people pushed out of amateur radio because they have unpopular political views or make an occasional mistake.

Finally, I can't speak for Bullon. I don't know the person, and I don't know if the things you say about him is true (I don't know you either). All I can say is what I know about ham radio. And I have generally found that to be a very positive experience. And I honestly think most other CB'ers would also (which is why I promote it every chance I get).

I have also generally found CB if be a very positive experience, which is why I still use it. Both radio services have value.

How effective are these complaints on the Newsgroups? What do they
accomplish?

John, I was responding to the specific statements of a single person. Don't take those comments out of context and apply them to an attack on anything else.

> The issue here should be over the
> illegal use of 11-meters. Not about

> why a certain licensed band is
> better than an unlicensed one.

If you were to read the other messages I have posted to this newsgroup, you would clearly see that I agree with that statement entirely. I have never advocated one radio service over the other. I have urged CB operators to add capabilities of Ham Radio to their existing capabilities. When talking about ham radio, I'm not asking anybody to choose one service over the other - I'm urging them to have both.

> Most people don't want to take the

Gee thanks, John. Nice of you to think of me that way.

Okay, you're preaching to the choir on this. Other than your view of the people using the 2 meter band, where do we disagree?

your not covering much!

> Using repeaters, I can talk to people as far away as Boise ID, Eastern
>WA, and Southern OR. That is a range of about 400 miles. And I can
>cover that range twenty-four hours a day, seven days a week.
>

there you go again. ive told you a million times we dont want to talk on repeaters.

> Because of that great range, I have just as many people to talk to as
>you do with your CB. While you are limited to talking to people within
>a few miles of your home, I can talk to people living over a much
>greater area. And just as many ham operators live in that extended area
>as CB operators live within a few miles of your home.

the guys you talk to are using q-codes on FM and trying to sound serious, thats a joke. hell i bet you hang around some of those storm chasing nerds that werent good enough to be cops.

> My wife, working in Seattle, can talk to me using nothing more than a
>five watt handheld. Her office is about twenty miles from our home.
>And, if needed, she can do that twenty-four hours a day, seven days a
>week - including the daylight hours when a CB handheld would be lucky to
>cover a mile. She is never out of touch when she needs me. And its
>free - no cellular phone charges (now that has to be worth something).

i'm sure this would be no trouble at all on one of the new ssb handhelds that are capable of covering the whole 11 meters not just 450khz.

> As for skip communications, CB cannot even begin to compare to Ham
>radio. And we won't even discuss the more advanced modes that you can't
>even use.

why dont it compare? when CB was a ham band it was the most productive band there was during high sunspot times(ten meters took that honor and its not open as much as 11), FYI were in a peak sunspot time now. ive said it before, i have 112 confirmed countries contacted on 11 meters ssb (its common for europeans to have even more) from the last cycle all with 25 watts out of a lincoln and a antron 99, if thats not good i dont know what is for a supposed no dx band. what modes cant we use? were freebanders, remember? we dont follow rules, we can use any mode we want. i guess you have never monitored the many packet stations that boom in from europe everyday. listen between 27.7 and 27.8 when conditions are good. youll be really suprised.

> If you honestly think that the Tech license has nothing to offer, then
>you really are dumber than I thought.
>

it has nothing to offer me, that i want. i enjoy dx and making friends worldwide not line of sight talking.

> If we were in a vegetarian newsgroup, and you had discovered something
>that would benefit others in that newsgroup, I most certainly expect you
>to spread the news.

ok you missed the point. which i fully expected anyways.

> But again, you're twisting the facts. You talk about forcing me to
>eat all my vegetables. How does that compare to what I am doing in this
>newsgroup?

twisting facts? i was simply making a paralell statement that has nothing to do with ham/cb so you could get the point, its obvious you did and dont want to adress it.

> I am not forcing anything. Indeed, I don't have the power

```
>to force a thing.

agreed. that ticket you have makes you nothing except the lowest form ham there
is.

> You can either read them, or
>ignore them.

i choose to read them kinda as a joke.

THE CANDYWRAPPER
It was another Payday and I was tired of Mr. Goodbar.
I saw Miss Hershey standing behind the Powerhouse on
the corner of Clark and Fifth Avenue when I
whipped out my Whopper and whispered,
"Hey! Sweetheart, how'd you like to Crunch on my big
hunk for a Million Dollar Bar?" Well, she
immediately went down on my Tootsie Roll, and it was
like pure ALMOND JOY! I
couldn't help but grab her delicious Mounds because it
was easy to see that this
little Twix had the Red Hots. It was all I could
do to hold the Snickers and
Crackle as my Butterfinger went up her tightlittle
Kit Kat and she started
to scream "Oh Henry, Oh Henry!" Soon she was
fondling my Peter Pan and
ZagNut and I knew it wouldn't be long before I
blew my Milk Duds clear to
Mars that gave her a taste of the old Milky Way.
She asked me if I was into
M&M, but I said, "hey Chicklet, no kinky stuff."
I said "Look you little
Reese's Pieces, don't be a Zero, Be a
Lifesaver. Why don't you take my
Watchamacallit and slip it up your Bit ~O~
Honey?"(What a piece of Juicy
Fruit she was too!) She screamed, "Oh
Crackerjack, better than the
ThreeMusketeers!" As I rammed my Ding Dong up
her Rocky Road and into her
Peanut Butter Cup. Well, I was giving it to her
Good ~N~ Plenty, when all of
a sudden... My Starburst! Yeah, as luck would
have it, she started to grow
Chunky and complained of a Wrigley in herstomach.
Sure enough, 9 months
later, out popped...... Baby Ruth!

Tim,

That's right, that rascal had something extra and probably killed all
forms of wildlife for miles around. Makes your Alaskan HAARP programme
seem like a driver.

PS. I always receive an e-mail from you simultaneously with a ng posting
- do you do this on purpose?

You know I'm the only operator in the UK that reads this board every
day:-)

I was given a TRC-430 CB, and need to know what fuses I need to install
inline as they are missing.
Also, there are three wires for power (positive, negative, and a
third). What's the third, and where does it hook up?

Thanks for the help!

Just because someone belongs to a group that has a few members that have no
respect for rules and regulations, it doesn't automatically make them the same
type of operators. Anymore than stating that because there are a few CBr's
that could care less about rules and regulations that NONE of them do.

Sam's Wholesale Club has a PAIR of Uniden FRS-1400( UHF-FM) for $80. About the
size of your hand,uses 3 AA Batts.Much greater range& clarity than handheld
CB's with rubber ducky. Just a different thought if you're not interested in
also monitoring traffic reports,or CB 19,etc.

Get a Texas Star 250.

Nearly the same physical size as the smaller amps, but packs a 275+ watt
punch.

Or, if size is really what matters, and not cost, the Texas Star 350 will do
ya right. Same physical size as the 250, and only a few dollars more.

They both work on SSB, too.

Toll Free

>   Nonsense.  There is no way that you can talk realiably for more than a
```

> few miles (especially during the day).

Really, I suggest that you get out a map and look at the distance from Houston, Texas to Dallas Texas and Houston to the Louisianna border. I talk this distance quite a lot.

Houston to Beaumont, too.

Guess again, Techie... We CBers have the distance thing going for us, too.

Get two decent base stations together, and I have talked (across the gulf.. Large water bodies carry signals farther) well into Louisianna.

With my simple base station in
> Bremerton WA, I can talk to people over an area starting at about
> Vancouver BC in the North going to about Portland OR in the South. That
> is a range of about 125 miles in any direction.

I can do that with my base station on 11 meters. Who cares.

And I can cover that
> range twenty-four hours a day, seven days a week.

So can I, when I find a clear frequency.

Don't tell me that is the problem with CB, either. If I am tying up the repeater in your link, then you can't do a damn thing. I know. I was one of the original members of the 220 meg Condor Connection, that linked up Tijuana Mexico to the Canadian border.

I have been at this a little longer than you think.

>
>   Using repeaters, I can talk to people as far away as Boise ID, Eastern
> WA, and Southern OR. That is a range of about 400 miles. And I can
> cover that range twenty-four hours a day, seven days a week.

You fail to impress me. I can do nearly the same thing, with my own station being the limiting factor, not someone elses repeater.

11 meter operators have also begun to set up repeaters, linked via telephones. The duplexers involved would be a little large for the average man to carry up, but it can be done.

>
>   Because of that great range, I have just as many people to talk to as
> you do with your CB.

Gee, takes you an entire network of repeaters to carry on a conversation with the same amount of people I can with 4 watts at 27 megs?

Tell me where the innefficient use of bandwith is.

While you are limited to talking to people within
> a few miles of your home,

Oh BS.

I can talk to people living over a much
> greater area.

Oh BS.

And just as many ham operators live in that extended area
> as CB operators live within a few miles of your home.

So, once again (since you said that I was full of it earlier), you prove my
point. CBRS has more people, crammed into a smaller section of bandwith,
and we use less power than you do!

>
> My wife, working in Seattle, can talk to me using nothing more than a
> five watt handheld. Her office is about twenty miles from our home.

Now what.

You have no comms.

> And, if needed, she can do that twenty-four hours a day, seven days a
> week -

Repeater goes down!!!!

Now what.

You have no comms.

including the daylight hours when a CB handheld would be lucky to
> cover a mile. She is never out of touch when she needs me.

Repeater goes down!!!!

Now what.

You have no comms.

And its

> free - no cellular phone charges (now that has to be worth something).

Repeater goes down!!!!

Now what.

You have no comms.

Seems to be a recurring item here.

>
> As for skip communications, CB cannot even begin to compare to Ham
> radio.

Guess you don't believe the ARRL then, eh? They love to endorse the different types of "skip conditions" that are available on 10 meters.

Remember, we are not that far off. And it usually takes less power to make a contact on 10 than it does on 40.

Antennas are easier to construct.

And we won't even discuss the more advanced modes that you can't
> even use.

Like what?

Packet? Been their, done that.

Any other digital modes? A simple soundcard and PC will do that for the CBRS.

Clover? Why?

>
> If you honestly think that the Tech license has nothing to offer, then
> you really are dumber than I thought.

Been there, done that. The tech license is a beginners license. I have done more building, experimenting (antennas, not included. I do more with them at VHF and above) and such on 11 meters just because it is fun.

And with CB, you have an asshole channel or two.

With the 2 meter and above crowd in my area, you have the asshole spectrum.

So, Senor Tech License holder, like I said before. I suggest that you actually explore some of the venues that you so fondly talk about, rather than spewing the same garbage that all the other hammers have come here and done.

Be original.

Stop whining.

If you don't like CB, then go away.

Simple to say.

Too hard for you to do.

Most repeaters are turned off by DTMF tones.

Capture the on / off tone sequence, and you can turn the repeater off an on at will.

Galaxy is an accepted brand of radio (the DX series) with the FCC.

They where raided last year, and the FCC didn't issue a cease and desist order.

Incidentally, they DON'T ship converted radios, they are all 10 meters, and they will NOT convert for you.

the origanal subject was "would being close to a tree cause problems?", and the
answer is no! ive had too many antennas work just fine in trees with the same
good match that i had on the ground

Debbie;

Thanks for the info about the 75wxst. My wife has decided that is the radio
for her car. The radio performs well with the exception of the squelch. You
described it as choppy. My description (as a non-technical user) is that it
is harsh. It is either off or it is on. Very abrupt change from quiet to
talk. My question is can this be adjusted any way?

I had a Anton 99 on a pole 5' off of the ground, the match is damn near
perfect, with 10 watts in on the bird 43 it would barely move the miliwatt
slug on reflect, I have not tuned it since I removed it from the top of a
50' push up pole, the match was the same there as it was on the 5' pole on
the ground.
So my point was still proved, how many times have you had this problem with
an Anton? I personally know that a tree would affect it because of its

location as opposed to the radiation pattern of this antenna, Hightower why dont you explain to the group how the earth would affect this antenna, but say guy wires at the base of the Anton would not, also explain to me how tuning (as John put it) would help an antenna that was reacting to something close by, Now I could understand if John had said something about matching the antenna, inductance, capacitence etc. etc., but he told the guy that "some tuning might be required" all he did was point the guy in the wrong direction, It sure is funny how you post so little, but when you do you stick your foot in your mouth taking up for a asshole whinebag, who instead of helping someone out only confuses people.

:>ham wanna be. You would think a real ham who looks for DX on 15 meters
:>would be doing what he is doing. No, a real ham would not waste his time like
:>Rick does. Don't get me wrong; I am not a real ham.

Well, lets see. I'm an Extra class since 1972. That was after I dropped out in (as an Extra)1954 due to family, funds, and having to move around a good bit with the FAA. During WWII I was a Army Signal Corps radio operator assigned to the Navy on a trans-atlantic troop & equipment hauler. Yea that's right, I used to have to swim that pond with the wolf packs and I know how to make it pucker up son. I also worked with Tropical Radio down in the south doing the "banana boat swing" and we're not talking about some needle on a meter either. By the way, when I first started with the Signal Corps before WWII, I was able to use the Ham station and we didn't even have a "W" or a "K" in front of the call.

While with the FAA, I was always after the other guys in TN to join me on the high bands. I loved 10 meters and when the FCC took away 11 meters I said "Oh well, there is still plenty of room." I'm getting pretty darn old now as you can guess and I figure that its time to do something about my 10 meter band. You got part of it way back and I figure that's about enough.

CB has given such a bad name to Amateur operators with their spit 'en splatter boxes, RFI, and total disregard for the rules that I guess its time for me to help out again. I've saved so many people's lives with the FAA it ain't even funny. I've handled Mars traffic during both the Korean & Vietnam wars when families used to come to my house or call on the phone praying for just a small message from their loved ones or please send this message to them. Whenever I hear that jerk talking about "what have I done to help with kids on drugs" it really pisses me off. I'll tell you what I've done, I've raised 6 children (lost the first two by childhood illnesses at age 5 & 12, a girl & a boy and this was before Danny Thomas got with the folks at St Jude) I raised them to be good upstanding law abiding citizens. And I'm helping with their children now.

But lets set the record straight before you get the wrong idea. I could care less what anyone of you guys or gals do down there on the CB band. The FCC gave it to you so I'll go along with that. But when you come up on my section of 10 meters then you just crossed the line. As you can guess I love CW. I fought for my piece of the band and I intend to use it. I can take the bad rep you and your goons gave me and my goons. I don't care that you get drunk and cuss so I can't let my great grand daughter listen to a CB. Hell, I wouldn't even care that you use those amps as long as you keep that trash from bleeding over on my $1800 Kenwood. More power to you. But Mr FCC wants some help on it so "ICM" for him.

But when you come above 28.000 or wipe out my QSOs because you don't operate that trash blaster correctly then you went just a tad to far. And what you guys don't seem to get is that Old Mr FCC doesn't need to much funding when there are bunchs of us who are fed up with it. I've been retired now since 1980 and the wife went SK 2 years ago. I've got all day to sit on the radio and read this computer and if Riley needs some help with you people you can damn sure bet he is going to get it. And you just don't realize how many Hams are jumping on this band wagon sonny boy.

Its very simple, keep it in YOUR section of the band and I'll do the same. Don't splatter on mine and I won't hock up the gain or fire up the RTTY on you. But you don't seem to be able to take the hint too well so I guess we will just have to do some of MR FCC's leg work for him and lets see if that gets any results.

I've helped no less than 32 CBers with their stations when they asked me to. Mainly because I sympathized with them because their neighbors were going to call the law or FCC on them. So I helped them get rid of their RFI. Even with their amps. But NO MORE. Its coming son so you had better get ready. And we know not to let on what we are doing at the local Ham club or Fests. We know a lot of them and we are looking for the others. We have some of those smart whipper snappers that work at ISP's gathering data. Hams perfected the art of DFing for the FCC. And it was Hams that helped develope the radio "finger printer". All it really needs now is a little more backing by law makers and we WILL be looking up your back door. And we all know how the general public feels about that CBer blasting out their phone and TV so you can bet that whatever law needs to be changed will most certainly get the proper doctoring for this to work.

And to Rick and the others who are trying to talk some since into you, keep it up fellas as more are coming.

> direction.

What would you do about guy wires? Don't say use insulators, I had my antron
up without insulators and still had damn near 0 reflective watts. And why
would you need a well-grounded metal pole to acheive a better match? you

allready try to make a point that to much counterpoise would affect this antenna, grounded for lightning, rfi etc. etc. but your not making yourself clear.

> The GPK-1 ground plane kit will slightly improve line-of-site
> distance, but will slightly decrease skip performance. In other words,
> the ground plane kit will pull the signals closer to the ground, with
> less signal going up into the air above the antenna.

Acording to you anything close to the antenna will affect its performance.
and how will this lesson the performance in DX? I would think this would lower your angle of radiation causing this antenna to not be as much of a "cloud burner"
Do you think that straight up is the best way to work DX? the RF energy is wasted.

>on this band.

Well, you are missing one of the advantages of ham radio.. the properties of the bands that hams can operate vary quite a bit. In June I was talking to a ham in Hawaii at 10pm from NJ... don't get propigation like that on CB at 10pm...

There are benefits and disadvantages to all things, even being a ham (gasp!). There are guys I would rather not associate with and I am ashamed to admit that they are hams, just as there are CB'ers that I would rather not associate with, but you get good and bad on both...

I've been to 2-3 sites that have mic wiring but can't find any info on Dak radios. I'm trying to find out 3 wiring diagrams. 1.) for a 5 wire d104 to dak 10. 2nd) Turner +3 to Dak 10. 3rd) Turner +3 to ts-5010

Thanks,
Jeff

The chip in question is a Sanyo LC72322N.

{ If you check out the Sanyo Semiconductor website (terrible layout, arrangement, etc.) you can download 9 out of 13 .PDF pages of the chip spec (other 4 pages inaccessible due to website bug). [Apparently they can't figure out how to do a 13-page Acrobat document without creating 13 PDF files!] }

However, it's an all-in-one chip - it contains:
  - 4-bit CPU, RAM/ROM;
  - LCD controller;
  - 150MHz PLL synth;

Without changing the firmware - which would involve resoldering in a new, differently programmed chip, akin to a ChipSwitch - this rig's gonna live on 10 meters only. I have seen no jumpers or easy-to-cut traces on the control/CPU/PLL board. The PLL seems to be a programmable-register-driven one so there's no external programmable divider wiring that could be tweaked to move anything.

Xtal modifications/switching could poss. move this - won't know till I see the schematic.

FM may not be super useful as many (but certainly not all) 10m FM repeaters use CTCSS (PL) access. You'll have to put on a CTCSS generator... one of the Communications Specialists boards or use a M/X Com chip that has both PL encode/decode on it. Also, this PL tone would then be externally controlled and not stored as part of a channel memory.

-Bill

I have to admit that I like the Wilson better than the K-40. I was running a K-40 years ago but received a lot of engine noise/external noise. When I switched to the Wilson 1000, it disapeared!

I now run a "Big Foot" (which is pretty much the same thing as a Firestick) 3' antenna and it works great.. SWR's are FLAT across the band...

You wouldnt want to bet me on that now would You, I guess last night I
imagined I talked to Hawaii, to a fine CBer named "Big Dawg " on the big
island the best part about it is we were both in a mobile, it was about 9:00
pm it was on AM not ssb And I was talking from NJ . I think you are the
one missing something here

Thanks Bill, looks like it's back to the HR 2510/2600/Lincoln with the Chipswitch after all. I guess Radio Shack didn't want to feel the wrath of the FCC on this new rig, although, I'm sure the OEM is Uniden anyway. Other similar radios, such as the SuperStar 4900+, and the Magnum Delta Force can be futzed with, but alas not our ol' radio on the corner store brand.

Phil I am well aware of the woodpecker, You are talking about something that isnt even remotely close. The woodpecker was transmitting on bands that had conditions to the US at the particular time of day they felt like jamming/interfering . We are also talking about a RADAR thats what the woodpecker is with more watts than any cber and probably most of the regulars on superbowl 6 can muster in there wettest of dreams . You cannot return a signal back to Earth if the ionsphere absorbs that particular wavelength Otherwise the bands all would be open 24 hours a day. We would be able to speak to you daily by just brute force power anytime of the day.It is impossible to alter the laws of physics Read below about the WoodPecker

From their own homes, many ham radio operators have quietly carried on an electronic war with the Soviet Union for the last six years and, in some cases, are winning. Their battle is with a powerful Soviet radar signal dubbed the "Russian Woodpecker."

The "woodpecker," as it is now almost universally known because of its unmistakable sound, still disrupts shortwave communications. Its signals have long since been traced to locations within the Soviet Union.

It is, experts agree, a Soviet over-the-horizon radar system. Radio waves in what is called the shortwave range, which are actually longer than those in the VHF or microwave range, are, unlike the others, "bounced" off upper regions of the Earth's atmosphere and returned to the ground. This is how you receive faraway foreign stations on your shortwave radio.

The "skip" also is used to get a radar signal over the horizon and back to detect incoming airplanes.

The Soviets, however, have ignored internationally~accepted rules about what frequencies can be used by whom, and simply transmitted their ultra-high-powered radar signals on any frequency where "skip" conditions are good at the particular time. Their signal also is unusually "wide," blocking out a large number of other stations.

"If you want to screw up a radar signal, all you have to do is send a return signal on its frequency which blocks out the echos. Hams, from the earliest woodpecker days, have been driving the monster off their bands by getting on the frequency and sending properly spaced dots back. The screen somewhere in Russia blanks out and the operators utter some Russian oaths and change the frequency to get rid of the interference."

It works, too, say many hams who have tried it, although it greatly helps if several hams in different locations "gang up" on the radar's frequency

Whats the Call OM,
I agree also I don't think unlicensed cbers should go on 10 meters there is
plenty of space below 28 megs. As far as running power I can tell you
without a shadow of a doubt many many hams run way over the legal limit.
They too cause RFI which is a fault of the manufacturers of the affected
devices.

On July 4, 1976, the Soviet Union began generating powerful electromagnetic transmissions, that were dubbed "The Russian Woodpecker" by western ham radio operators. The Russian signals are primarily pulsed at the very dangerous 10 Hertz Extreme Low Frequency (ELF). It has remained on the air more or less continuously ever since. Varying up and down through the frequencies between 3.26 and 17.54 megahertz, it is pulse-modulated at a rate of several times a second, so it sounds like a buzz saw or woodpecker. It was soon traced to an enormous transmitter near Kiev in the Soviet Ukraine. This transmitter and others like it are believed to be based upon the original design of Nikola Tesla.

Hello alltogether,

announcement:
What: 8th "Rheintal Electronica 99"
       (Radio and Electronic exhibition, fair)

Date: This Saturday, 6th November 1999
Time: opening 9.00 a.m. (CET) Ending about 4.00 p.m.

Where: Durmersheim (Germany, south of Karlsruhe, South-Germany)
Parking: For free, free bus-transfer to the exhibition

Radio Assistance
CB-Radio     : Ch. 15 FM (27.135 kHz)
```

Amateur-Radio: 145,500 MHz F3E

Program:
- private Sale of
  CB- and Amateur-Radio (used and new sets)
  Computer, Software, electronic Spare-Parts, Accessoires
- Demonstrations
- German CB-Musuem (800 CB radios in one Luxury Coach)
- Dealer Exhibition
- Information from RegTP (Regulation Authority)

- contributions and discussions (in german language)
* GPS und Funk-Applikationen (Dr. Karl H. Ilg (DK2WV))
* Gestaltung einer eigenen Homepage (Hans J�rgen Schlager)
* Der Weg zur Amateurfunk Klasse 3 (Martina Lohse)
* Vergangenheit und Zukunft des CB-Funks? (Henning Gajek)
* Packet-Radio auf CB-Funk - Ein Netz mit Zukunftsperspektiven?
  (Dr. Andreas Koch)

John, I seriously doubt that you will find many ham operators advocating that CB'ers get a ham license so they can operate with high power. One of the basic priciples of proper radio operation is to use of as little power as necessary. That priciple is supported by regulations applying to virtually all radio services, including Amateur Radio.

Instead, Amateur Radio is about learning the skills of putting together a well-constructed radio station that can communicate over great distances without the use of excessive power.

There are certainly occassions where higher power levels are required, such as EME communications (bouncing signals off the moon back to other locations on Earth). But, considering the losses associated with this type of operation, higher power is not excessive in this case.

But, other than these rare operating modes, high power is not really needed. For example, satellite communications over a range of several thousand miles can be accomplished with only a few watts (many have done it with nothing more than a 5-watt handheld radio in one hand and a small beam antenna in the other hand).

> And then, when the CB operator ignores
> or disrespects the ham operator, the
> ham operator can leave the newsgroup
> and be done with it.

John, as we have explained in other messages, we ("the ham operator") also use CB radios, so this newsgroup also belongs to us. Why should we leave just because we also have have a Ham license?

> I'm sorry, but if every CB operator got a tech license and moved to
> 2-meters, there would be exactly the same type of jamming and cussing,
> and rudeness that is found on channel 6.

You have made this argument before, but I don't buy it. Would the problems increase if more people got a ham license? Most certainly. But I think that Amateur Radio can handle those problems. For one thing, there is no such thing as anonymous operation on the ham bands. The FCC has greater ability to monitor the Amateur Radio bands and many ham operators have RDF skills. By the way, this explains why CB'ers who operate illegally on the 10 meter ham frequencies are located so quickly.

Plus, most new ham operators quickly realise they have more to lose from illegal operation. In addition to the loss of operating privileges, there are serious fines involved. For many, once they realise the benefit of Amateur radio, the potential loss of operating privileges is enough to prevent them from operating illegally.

Personally, I don't really care who you consider, or don't consider, a "real" ham.

> Secondly You were issued a license on
> Aug 3, 1999. How can people think you
> represent the ham community, you havent
> even gotten your feet wet.

You need to learn how to use the callsign search engines. The date you refer to above is the date my current license, with new address, was issued. It is not the date my first license was issued.

And, since you are looking up license information, I should also point out that I had a Ham license in Germany for about seven years before getting my first US license (german wife - dual citizenship). So, to clear the air, I've had a ham license for about nine years in total.

But, regardless of that, I don't claim to represent the ham community. I claim to be part of that community, nothing more.

Wait till you see what is going on with the various DOTD's in several states. Ask any trucker that knows his "Red Book" what it says about operating heavy equipment while engaged in illegal activities. And they thought those Federal Licenses was just to track speeding tickets and DW/DUI's.

Do you realize how much money both the federal & state crumblements could make with a serious crack down on illegal CB use just in the trucking industry? Kinda makes you wonder if those blasted alarm, phone, & other techno device companies are in on it with them. All they have to do is get those DOTD boys to start checking for amps when they pull em over for an inspection. One man at a weigh station doing a cab check could make bundles for them. And it even leaves the trucking companies out of the picture. After all, they didn't put it in there, the driver did.

If they ever get it to where the local cops can confiscate CB equipment and impose fines (after all, they need some sort of self-funding incentive) for interference to home devices, you can bet that it will be plastered all over newspapers where irrate homeowners can do the leg work for them.

It wouldn't surprise me a bit if Ol' Good Buddy Billy Tarzan down in louisiana hasn't got something in the works already.

> > An antenna being mounted that close to a tree may well require some tuning nevertheless. Also, if the antenna is less than 1/4 wavelength above the ground, you will have a high SWR reading.
>
> Man you are realy something, Explain to the group how an Antron's match would be affected by being close to the earth.

I'll take care of this one, John. First of all Kovorkian, you can start learning about this by reading the Solarcon A-99 owners manual. Under the installation instructions, it says... "For best performance, mount your antenna at least nine feet above the roof of the nearest building and 18 feet above or away from any metal object or structure."

Under the troubleshooting section concerning SWR problems, it states... "Be sure the antenna is installed at least 9 feet above the roof of the nearest building and 18 feet above or away from any other metal objects in the area."

The reasons for these warnings, Kovorkian, is that an antenna of this type is adversely affected by nearby objects. This would also include the ground. Of course, since very few people would mount an antenna like this that low to the ground, I would imagine that Solarcon did not see any reason for mentioning the ground in the manual.

Now, we can get into a complicated explination of why an antenna might be affected by nearby objects, but it might be easier to realise if you simply tried it for yourself. Locate the antenna near the ground and take an SWR reading. Now locate the antenna ten feet in the air on a metal pole and take another reading. You will quickly see that the SWR drops as the antenna is moved higher above the ground.

With the A-99, it is possible to get a good SWR reading over wide range of frequencies if it is installed correctly according to the instructions. In fact, with this antenna, best performance can be achieved by installing the antenna about forty feet in the air on a well-grounded metal pole, with no object within twenty-five feet in any direction.

The GPK-1 ground plane kit will slightly improve line-of-site distance, but will slightly decrease skip performance. In other words, the ground plane kit will pull the signals closer to the ground, with less signal going up into the air above the antenna.

By the way, one word of warning about the A-99 installation. Make sure to use the two included lock washers between the three antenna sections. The antenna was designed to be used with these two lock washers in place - the SWR was tuned with these lock washers in mind, and the lock washers insure good electrical connection between the antenna sections (important as the connections age).

Johnny, I read your letter and I couldn't help but notice a couple of your statements. In your letter to the FCC you said that you have recently become a new Ham, after years of being a long time CB operator. I then went to QRZ and looked at your date of birth, which states that you are about 41 years old. This is my question:

Why, after all of this supposed time spent on CB, are you all of a sudden infuriated with illegal CB activities, and why did it take you 24 years to get your Ham license? (your KSO-9650 CB call is from Aug/1975) There was more illegal CB activity in your area of NY in the 70's than there is right now.............why the all the NEW concern?

> First of all Toll, you do not speak for the "rest of the world." You

just as you dont speak for the rest of hams.

> In fact, considering the huge backlash against CB operators in
>this country,

the only backlash is from no code techs that are tryiong to impress other hams.
never hear a general or higher complaining about this crap because they dont
care.

> it is fairly obvious that CB has very little support left
>in the this country.

i would say al the user(which greatly out number hams and arrl) members support CB all the way

> And that is exactly why I am arguing that the "illegal" crap has to
>end.

crap is just your opinion and its not worth the band with it takes up.

> If not, new federal laws, now and in the future, will allow local
>governments to regulate CB operators right out of existence.

laws, laws, laws, the weak people in society always look for help rom somewhere. we have enough laws already. go pay some more taxes so they can enforce them.

> Man, you guys keep harping on the loss of a few frequencies. Years
>ago ham radio lost a few frequencies because ham operators didn't use
>them.

years ago??? your showing you lack of experience on that statement. toll was talking about the loss of 440 not 11 meters.

>The government should have given them to
>someone that did value them.
>

the government sold those freqs to the highest bidder, ot to who needed them the most.

> All of that does not, even for a moment, suggest that our commonly
>used bands are threatened.

the HF bands are not threatened but VHF and UHF certainly is.

> Ham radio is not going to disappear anytime
>soon.

once the old men die there will be nothing but this new generation of repeater comandos turning everybody off to the hobby and it will die for good.

> I'm not asking anyone to choose between CB and Ham radio. I'm urging
>people to add the new capabilities they would gain through Ham radio to
>the existing capabilities they already have with CB.

11 meters is a world wide band and also great for local. cant gain nothing by having a tech license.

> I simply cannot understand why you would find that idea so objectionable.

we dont want you urging us to do anything. would you like us to come to your house and force you to eat all your vegetables just because there good for you and youll be able to do more???

My limited experience would agree with Dwight and John. When I bought my A99 I initailly just hooked it up and leaned it agaisnt the fence to see if it worked. The SWR was high but not unusable (3:1). I later mounted it on 30' pole attached to the side of the house (house is 18' high at gutters two feet of pole is in ground) and the SWR is 1:1. The Radio is a Uniden Madison.

> I need some experience here... My wife and I are going to be making a long move soon in two cars and need to stay in touch. So I went to Wal Mart and bought a set of 2 uniden CB's thinking they'd do the trick. I don't need anything fancy after all. Well, I put in the batteries, hooked up the little rubber antennas and got exactly 100 feet away from my wifes car before we started breaking up. I know the stuff I bought is crap and is going back to the store tomorrow, or maybe getting a bigger antenna, but I also don't want to spend a fortune on this one long trip. Can anyone advise me on a Cheap but functional radio, that will give me at least 1 mile of good clarity from one vehicle to another? I appreciate any help in advance.
> Thanx!

The metal of your car is blocking the signal of your handhelds. An outside antenna can easily increase your range by a couple of miles.

Take a run to Radio Shack and buy a couple of cheap magnetic mount antennas (item 21-989 it not bad to start out - about $20 each). Note that a longer antenna is generally better than a shorter one. Make sure the antenna plug will fit your radio or get an adapter (item 278-120 / PL-259 to BNC - about $4 each).

Also, be warned that the batteries will go dead very quickly, so you might also want to run your radios from the lighter socket in your car (item 270-1533 is one example - about $5 each). Radio Shack sells several cords that might fit your radio (take the radio in with you). You can avoid this situation later by installing mobile radios in each car (these are wired directly to your electrical system).

Good luck on your move.

Actually, not a lot. But, in the ham newsgroups, there are representatives from both sides arguing the issue (and have been for months). The people posting are not likely to change their opinions, but perhaps someone reading the messages might be influenced (at least that is the common thinking).

Heck no. An antenna array that big would be bigger than my house, and certainly larger than my yard. I was lucky to get the antennas I have up. The guy wires are right up to my neighbor's fence.

But it is real tempting. I have been thinking about it. I don't really think my neighbor would mind a huge antenna array hanging over his house. I'll just tell him it is a large tv antenna. :-)

I don't think so.

Sure, there are HAMs here with 'attitude'. But there seem to be
more CBer's here with attitude that bait them.

Come on, you see it. The guys who intentionally post the BS
messages that are just really designed to pull the HAMCOP
guys out of the woodwork.

Yeah, there are some assinine HAMCOP people. But ignore
them and they go away, or at least are tollerable.   There's a
hell of a lot more helpfull HAMs here that DON'T post as
HAMs, but you can tell they are. Maybe it's because of the
baiters waiting to pounce.

I know you are right warlock. We of the older crew here on this newsgroup have actually done this test several times. Perhaps the new crew and the 102" only crew should just try some of the tests and they will at least see for themselves.

> having a tech license.

Nonsense. There is no way that you can talk realiably for more than a few miles (especially during the day). With my simple base station in Bremerton WA, I can talk to people over an area starting at about Vancouver BC in the North going to about Portland OR in the South. That is a range of about 125 miles in any direction. And I can cover that range twenty-four hours a day, seven days a week.

Using repeaters, I can talk to people as far away as Boise ID, Eastern WA, and Southern OR. That is a range of about 400 miles. And I can cover that range twenty-four hours a day, seven days a week.

Because of that great range, I have just as many people to talk to as you do with your CB. While you are limited to talking to people within a few miles of your home, I can talk to people living over a much greater area. And just as many ham operators live in that extended area as CB operators live within a few miles of your home.

My wife, working in Seattle, can talk to me using nothing more than a five watt handheld. Her office is about twenty miles from our home. And, if needed, she can do that twenty-four hours a day, seven days a week - including the daylight hours when a CB handheld would be lucky to cover a mile. She is never out of touch when she needs me. And its free - no cellular phone charges (now that has to be worth something).

As for skip communications, CB cannot even begin to compare to Ham radio. And we won't even discuss the more advanced modes that you can't even use.

If you honestly think that the Tech license has nothing to offer, then you really are dumber than I thought.

> > I simply cannot understand why you would find that idea so objectionable.
>
> we dont want you urging us to do anything. would you like us to come to your

> and youll be able to do more???

If we were in a vegetarian newsgroup, and you had discovered something that would benefit others in that newsgroup, I most certainly expect you to spread the news.

But again, you're twisting the facts. You talk about forcing me to eat all my vegetables. How does that compare to what I am doing in this newsgroup? I am not forcing anything. Indeed, I don't have the power to force a thing. I post my opinions. You can either read them, or ignore them. You're not being forced in any way.

On a similiar note, some trucking companies have sent out memos about illegal radio equipment aboard their rigs, I was told at work to be on the watch and I am Ham so I drew lots of attention. (I work on an offshore oil rig). The FCC is probably behind it some way, A letter to a truck stop chain from the FCC would cause their legal dept (Larry the Lawyer) to recommend not dealing in anything which might carry a hassle. FCC types also travel they highways and byways and probably stop at truck stops to fuel up their RVs and spy in on how the other half lives.

It will be interesting to see how the FCC reorganization will line up. Who will do what will be the big question. Also watch HB2346 in Congress, need to write Mr. Tauzin (R-3rdLA) who chairs the Telecommunications Sub-committee about the why you think it should not pass. (small cities are lobbying hard for it).

Then I'd give him the job of "Official Clock". That way I no longer have
to worry about the time. Let the "OC" tell us it's time, and then we can
all identify. Might make the guy feel special ;)

Arrogance is a personality flaw that has nothing to do with a person's
license class.

The fact is that anyone that decides to put forth the effort to get even
a tech license, is demonstrating a comittment that is just not there for
the type of people that ruin CB. They can just buy a CB and instantly
cause hate and discontent. Having to work for a ham ticket to do the
same thing, isn't worth it for them. It's not how much technical
knowlege that you have, but a willingness to COMMIT to something, that
weeds out the A*-holes.

>

> and running for about $100 with a quick stop-over at Radio Shack.

Who will be soon annoying the adult locals in the area, by breaking in
every 5 minutes looking for his millionth radio check, or time check. We
used to go through what we called the "Christmas Syndrome". Every year,
at Christmas time, the band would be flooded with kids with new CB's.
Some became annoying, some gave up after a while, some became jammers,
and some became good operators. If the kids all have a channel that they
can hang on, then everything is cool. But if they just tune around, they
will just be problems for adults that have nothing in common with them.

The only negative feeling that hams may have for Cbers has to do with their undisciplined operations, and lack of respect for the rules. What CBers do on their own channels is not something that the average ham cares about. Believe it! Unless a Cber is either illegally on a ham frequency, or is running a really dirty splatterbox, and interfering with a ham band, most hams couldn't care less.

Hams try to "elmer" prospective radios people, including Cbers. Most hams would love to "upgrade" a CbBer, that shows promise, to the ham ranks. Now if the fact that some of this "elmering", which has much emphasis on rules and regs, bothers you, then maybe you can't handle ham radio. It's never meant as a slight toward anyone.

In 1970, in my area (SE PA.), there were 2 channels that had any real traffic. By 1975, there were about 6 or 7. In 1970, most stations used call signs and mostly called their own base or mobile units. In 1973 there was about a 50-50 split between hobby users and "personal business" users. In 1976, there were about 80% hobby users. In the local town (Which became known as "bleed city"), there was at least one antenna on every block by 1975. But in this area, the explosive groth in CB was from between 1973 and 1977. My neighborhood had about a dozen Cbers in it (and 2 hams). Now there are only 2 of us that remain (and 4 hams).

But again, most people in the early to mid 70's never ran more than 150 watts on average. One guy had a Palomar Skipper 300, another had a D&A Maverick, and another yet had a Wawasee 200 watter. Most of these were bought from local CB "garage dealers", or from Henshaws.

> conflicts.....................At present there are about 11 channels out of
> 40 used by locals.

Agreed. There seem to be much less "Base Station" activity, while there seems to be an increase in mobile activity. I can spin the dial now, and hear activity on all 40 channels, but most of it is distant (less than S5). There is only one local AM channel (Where the signals are at or above S9), and 2 semi-local SSB channels (SSB covers a larger area)

It's funny, how, with seemingly less overall channel usage, how what's left can be so disruptive. Hardly a night goes by on the local AM channel, that there isn't at least one music player, a person trying to be an agitator, truckers just jumping on channel from 19 without even breaking, foul mouths etc.

I hardly believe that. There must be some infraction somewhere. It is
NOT illegal to harbor a different opinion on ANY topic. There's nothing
in part 97 that prohibits democrats, or any other political view, or any
other topic that could not be considered obscene or indecent.

I made a CB repeater once. Just for the "hell" of it. Had too much
desense to be practical. The idea of 9 foot duplexer cavities, just
didn't sit well either.

We used to run FM on 26.675, about 12 years ago. Went there to "escape"
the skip noise.

>

> make a contact.

The real irony is that most of the time, the illegal freeband has much
better operators, than the regular legal 40. Most freebanders go there
to escape the riff-raff on the regular 40. Since it takes a little doing
(and more money) to get a radio that has extra channels, a common low
life won't bother. Much the same reason as they won't bother getting
into ham radio. The people who run on the freeband, for the most part
are either looking for better DX conditions, or are trying to get away
from the DX noise, so that they can continue to have local QSO's.

CB is *MY* band as well. The fact that I also hold an amateur license is irrelevant to these discussions. When I speak about the CB band it is as a CBer. I and many like minded CBERS, are sick and tired of those who hold the rights of others in contempt, plain and simple. You keep trying to deflect this into a "ham vs. Cber" arguement. This is not the case. It's is more a "clean, decent, law abiding, respectful vs. selfish, arrogant, scofflaw".

> >Someday, that "dork" may save your life, or may be the guy you have to

Like it or not, there will be times in your life where you will have to deal with people who DO have authority over you. You have a choice, to either grin and bear it, or suffer the consequences. If the thought of working for a "dork" botheres you so much that you would quit an otherwise good paying job, then YOU can live in a substandard lifestyle.

True story. Back in 1975, there were a group of us tennagers, who all thought that our Sh*t didn't stink, and we ran on Channel 10 (right after the truckers moved off). We thought that we "owned" the channel, and regularly gave a hard time to any "squatter" that happened by. One of the people that used to insist on doing battle with us, was an old guy, who was trying to contact his base after work. One day the guy said to us "keep it up, sooner or later you'll all have to see me, and then we'll talk". We laughed at him, at his "idle" threat.

But we soon found out what he meant. Seems that this guy was the chief examiner at the drivers license center. He took the time to find out who most of us were (It didn't take much considering all the clues we gave out in our conversations), and when it was time to take the driver's test, it was payback time. Many of our group had to retest several times (I had to test 3 times).

So just remember, what goes around, comes around.......

The funny thing is that CB locals have dropped off drastically in the
last 15 years. There may be more mobile activity, and the background
chatter seems to be higher, but the amount of local base stations seem
to be in decline, at least in my area.

If the people that operated with foul mouths, and inconsiderate
behavior, were somehow removed, it would be a LOT nicer for those that
remained. Maybe then, we wouldn't need the extra power to get over the
idiots, or the extra channels to get away from them.......

I understand that. It's just MUCH worse when you add 1000 watts to it. It's also worse if you "encourage" it. I usually turn up the squelch to get rid of the skip. I don't call someone in "DX-land", because that just starts the ball rolling. Next thing you know, a dozen people jump in and want to work you or the other station. And then a dozen times that dozen starts calling the other dozen and so on and so on...........

The other night, the channel was relatively quiet. I was talking local, and I started hearing other local-sounding conversations. I knew the skip was rolling, but so far it was just locals being locals. The next thing you know, "Roger Redneck" comes in there with his overmodulated splatterbox, and starts calling DX. Within 15 minutes the noise level had jumped from about S5 to S9+, as other killowatt cowboys fired up their rigs to see what was out there. The funny thing was, we were able to hear 4 watt stations (at S5 levels), initially. But the yahoos had to fire up big power to do the RF equivilent of shooting fish in a barrel (with a REALLY big gun). The end result was that the channel's noise level increased beyond the capacity to work 4 watt skip OR to talk comfortable local. Totally unnecessary, totally inconsiderate, totally selfish.

> I THINK NOT!!! that shit's for the birds.

Different situation. If someone is attempting to physically harm you,
you have the right to defend yourself, by taking whatever means to
subdue the attacker.

In a "discussion" no one is threatening your life, so the analogy is
flawed.

If a discussion cannot stay with the facts at hand, without going off
into a name-calling tangent, then its value has diminished.

If you stay focused on the points and not the person presenting them,
then you have a better chance of "winning" the debate.

Ham radio is a collection of FREQUENCIES. The "Geeky" aspect is
dependant on the PEOPLE that are on those frequencies. Get your license
and start a group of your own with "normal" people. That way you have
all the privileges of ham radio LEGALLY. If nothing else, that license
will hold the local cops at bay when they come knocking at your door for
disturbing the neighbors........

My wife got her license, and she's as non-technical as they get. She
just got tired of the "verbal groping" that she had to deal with on
CB....

Someone would have to be a real wing-ding, to look up a DX call, and
travel the distance, just to "mess up" their home. Since I don't
normally engage in "inflamatory" QSO's, people would have no legitimate
reason to want to do me harm.

This "Identity Paranoia" seem very prevelant on the CB band. I've always chalked it up to the fact that most people run illegally in one respect or another, and have a need to "hide behind the mike", to make any law enforcement action that much tougher.

The real irony is that despite the steps that people take to "hide" themselves, a clever "sandbagger", can gather tons of information from just listening to conversations. I've listened to people, and just from their casual comments, I figured out where they worked, how many kids they have, how old they are, the general area that they live in (And simple DFing would narrow it down from there), they type of cars they drive, the make and models of their radio gear (And whether it's illegal) and so on. You don't have to announce your name and address for people, intent on finding you, to track you down.

You keep missing the point, so I will repeat it slowly for you once again:

MOST OF US, THAT HAPPEN TO ALSO BE HAMS ARE ALSO CBERS, AND STILL USE THE CB BAND, AND HAVE A STAKE IN THE DIRECTION THAT IT IS TAKING.

Because we hold ham licenses, does not meant that we cease to use, care, or have a valid opinion on the direction, rights, and operations on the CB band.

You need to let go of this "Ham vs. Cber" thing, it's getting old.

Or a real lack of time. I'll get around to it one day. I hope you don't mind.

> dont say you havent upgraded becuase your
> happy were you are, because that is the

> accept that as a reason from us.

Actually, I am fairly satisfied with where I am. I'm getting what I want out of ham radio at this moment. That may change in the future, but there is always time to worry about that then.

Again, twisting the facts, Tim. I'm not expecting you to seek my acceptance. If you have what you want, then more power to you. But that still won't stop me from talking about Amateur Radio, or urgeing others to check it out. You can either accept that, or ignore it. Heck, I ignore half the junk you say. I don't see any reason that you can't do the same.

Man, I live in Louisiana (Tauzin's area) so I have opinion (like a nose,
everybody got one!;). Brother Tauzin is being lobbied mainly by the Big
Cellular Companies so Ham and CB is small fries to him (I have spoken to
him about Ham Radio and his main interest is cellular) The local Hams
don't care for him and the CB crowd doesn't fit in real well with his
vision of communications for all (at $.30 per minute). Local towns here
are lobbying for the HB2346 due to a few Stupid people who run bad
radios, high power and knock out the cable system. I have already been
inspected for interference to the CATV system by the FCC so I know what
the term POLITICAL STROKE means.

Keywords: radio amateur ham cb scanner shortwave netiquette
NNTP-Posting-Date: 1 Nov 1999 17:21:35 GMT
Newsgroups: rec.radio.amateur.space,rec.radio.broadcasting,rec.radio.cb

Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate audience, below is a list of the rec.radio newsgroups. In most cases, a group's name will explain its purpose. Cross-posting should rarely be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-running thread results from a single cross-posted article, and its content drifts further and further away from being "on-topic" in the various NGs which receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups" posted on the 15th of each month.

Jeffrey Herman, KH6O
(rec.radio.amateur working-group)

*It's been sadly reported that the moderator was lost to us in an automobile accident; the future of this newsgroup is not known. 73 Bill...

Your right!
There are a few of us that run amps but for the largest majority we just run
some loud ass radios.
 Even those of us with the loud assed radios are a minority though, most
drivers just go out and buy a run of the mill Cobra, Uniden or Rat Shack
radio with a mirror mounted fiberglass stick and are more than satisfied.
 I used to be but now its a barefoot Galaxy 99 and a 2000 trucker or nothin
for me.

The 150 mile restriction is useless what are you supposed to do if you are running your 4 watt station and you now have someone 5 states away talking in youtr radio like they are around the corner and they are running a legal station. I mean here we are on a worldwide band when the cycle allows it to and you are restricted to comm of 150 miles. It just shows how out of date, out of reality the FCC rules are.

Dave Hall <nojunkmail_n3cvj@worldlynx.net> wrote in message >
> The other night, the channel was relatively quiet. I was talking local, and I started hearing other local-sounding conversations. I knew the skip was rolling, but so far it was just locals being locals. The next thing you know, "Roger Redneck" comes in there with his overmodulated splatterbox, and starts calling DX. Within 15 minutes the noise level had jumped from about S5 to S9+, as other killowatt cowboys fired up their rigs to see what was out there.

A 3amp fuse should work, if it is a sideband radio go with a 4amp fuse, but no matter what do not put anything larger than a 10amp fuse in the radio if you care to save the radio if it is ever hooked up backass wards, the third wire is most likely a memory wire, I am not familiar with this radio, try to power it up without it, if you turn the radio off and back on, if the channel display stays the same and doesn't go to channel 9 when you turn it back on it might not be needed, if it goes to channel 9 when you power it back, you will need to feed this wire with a constant hot, is this third wire orange?

You're not losing anything by getting a ham license. And you are gaining a wealth of other capabilities. Anyone who would pass all that up just so they can use an illegal linear, and play with noise toys, is a damn fool.

>>>>That is a bold faced lie.

When you get a ticket, you stand a lot more to lose if you get caught doing anything that you enjoy on the CB band today.

Their is a lot to lose by getting a ticket, if you are not going to use the ticket to it's fullest.

More drivel by Dwight... The newly licensed expert on all affairs DC to Daylight.

Jesus, you are a newly licensed, newly educated amateur operator, aren't you.

> >
> > My opinion has to do with the fact that
> > instead of hams telling CBers to get
> > their ham licenses so they can then
> > operate with high power <snip>
>
>
>   John, I seriously doubt that you will find many ham operators
> advocating that CB'ers get a ham license so they can operate with high
> power.

Then I suggest that you go to www.deja.com and search the archives and find out that one of the basic premises that amateur operators tell the CBers is that once they have their ticket, they can operate with HIGH POWER (being that the limit on amateur bands is 1500 watts for most classes and bands).

Your really opening your mouth and showing that you don't know the history of the newsgroup here, Dwight.

  One of the basic priciples of proper radio operation is to use
> of as little power as necessary. That priciple is supported by
> regulations applying to virtually all radio services, including Amateur
Radio.

Please see the above.

>
>   Instead, Amateur Radio is about learning the skills of putting
> together a well-constructed radio station that can communicate over
> great distances without the use of excessive power.

And the other school of thought:

Instead, Amateur Radio is about learning the skills of putting together a well-constructed, high power contesting station that is capable of completely obliterating all the competition that comes in its path, leading the user to the highest score over a weekend period. This will all be done with two hole Alphas, Henry's, and homebrew equipment using tetrodes with handles.

So, how is this different than channel 6?

>
>   There are certainly occassions where higher power levels are required,

> such as EME communications (bouncing signals off the moon back to other
> locations on Earth).

And contesting, and the jamming that is going on on 75 meters, and the idiot who thinks that they must OWN the local 2 meter repeater...

And the list goes on, and on, and on: For both services.

But, considering the losses associated with this
> type of operation, higher power is not excessive in this case.

Considering the losses that happen on sporadic-E skip, this would not be considered excessive power when attempting to make a contact, would it?

Or, the other school of thought...

Well, they make an amplifier capable of 1500 watts, I can use it.

>
> But, other than these rare operating modes, high power is not really
> needed. For example, satellite communications over a range of several
> thousand miles can be accomplished with only a few watts (many have done
> it with nothing more than a 5-watt handheld radio in one hand and a
> small beam antenna in the other hand).

And many have done it with a megawatt of ERP using high gain parabolics or multiple arrays in echelon, etc., etc., etc.

To each his own, but I don't hear you spewing this shit in an amateur newsgroup.

>
> > And then, when the CB operator ignores
> > or disrespects the ham operator, the
> > ham operator can leave the newsgroup
> > and be done with it.
>
>
> John, as we have explained in other messages, we ("the ham operator")
> also use CB radios, so this newsgroup also belongs to us. Why should we
> leave just because we also have have a Ham license?

And why should the people who use CB radio strictly have to put up with the arrogance that you are showing?

>
>
> > I'm sorry, but if every CB operator got a tech license and moved to
> > 2-meters, there would be exactly the same type of jamming and cussing,

> > and rudeness that is found on channel 6.
>
>
>   You have made this argument before, but I don't buy it.

Why not?

Wait, I get it..

You REALLY DO believe that if someone has a ticket, they are better than
someone who doesn't.

You arrogant little asshole. The truth has finally come out!

  Would the
> problems increase if more people got a ham license? Most certainly.

But if a person was from 11 meters, and acted like an asshole, you don't
believe that if they went to 2 meters they wouldn't eventually end up the
same way?

I don't believe it from experience. I had a friend who went to General.
Had a blast for about a year... Then his assinine behavior started up
again, only this time it was on 2 meters, then on 440 when 2 meters began to
become vacated.

Doesn't jive, Dwight.

> But I think that Amateur Radio can handle those problems.

Yeah, right.

Just like they are handling the Liberty.Net, right?

  For one
> thing, there is no such thing as anonymous operation on the ham bands.
> The FCC has greater ability to monitor the Amateur Radio bands

Oh. O.K.... The FCC can't monitor 11 meters, but they can do a bang up job
on 10, right?

 and many
> ham operators have RDF skills.

So do many of the CB operators.

Antennas have been pulled down to prove it!

By the way, this explains why CB'ers who
> operate illegally on the 10 meter ham frequencies are located so quickly.

Right.

And they are busted, right?

If that was the case, their wouldn't be the epidemic that so many amatuer operators complain about now.

Take your fantasy world somewhere else. Amateur Radio is not the end all radio service. It doesn't even come close.

>
>   Plus, most new ham operators quickly realise they have more to lose
> from illegal operation. In addition to the loss of operating
> privileges, there are serious fines involved.

Gee, and if you read... Those are the same fines that can be levied against a CBer operating illegally.

For many, once they
> realise the benefit of Amateur radio, the potential loss of operating
> privileges is enough to prevent them from operating illegally.

That is plain BS.
Have a nice day.

Not necessarily...

Those whom you hear everyday are the bigger stations.

Just because someone hears me one or two days doesn't make me a superstar.

The fact that my station is consistent makes me one of the superstars.

Give me a break, Ive heard far more cussing on 2-meters than Ive ever heard
on channel 6. And as far as jamming, I would like to see you jam 6, or any
body else for that matter, This would only be a feeble attempt.
And what rudeness goes on here? This channel has been operating the same way
since the 23 channel radio days. And I personally think it is pretty damn
cool.

Just curious. Was the 5000 a Trucker center load type, or a base load mag
mount type.
I use the 5000 Trucker on a 18" shaft with about 48" stinger on the toolbox,
and really does its thing.

Joe,

What Rick and John John are trying to do is run all of the CBer's
(especially ones who talk on channel 6) off the band.
Not just 10 meters but 11 meters too. They cannot stand the fact that a few
of us get together and actually have a mutually great time. They are trying
to destroy what we (our circle of friends) have. Our competitions have been
around a lot longer than these lames think they have. Some of these guys
have been competing for 20 years.

You can go out there and wait all day long on your 10 meters and scan every single frequency but you will not find any of us there. We utilize just one channel. And it is within the legal CB band.

I don't blame you for wanting to get rid of the trashy CBer's. But why go after the ones that are not hurting anyone? We have never bothered Rick or John John. We don't go up on their precious channels and trash them. They are a couple of Ham Supremist wanna-be-FCC-cops. After I read your post I feel that you have some smarts in your head. Please don't go siding with lames like these two who are out to get the world with John John's amunition and his Rambo warfare. You seem to have more intelligence than that. I feel the same way about the CB band and all the trash out there. Feed it and it will get bigger. Starve it and it goes away.
I think I have said enough.

Howdy!

I don't have the original post to quote from, but I found the following link
if someone is still interested in all the common CB terms.

http://www.cbgazette.com/slang.html

...kinda interesting collection...

Best Regards,
Jay

Thanks for the quick reply!
The radio does indeed have a channel 9 priority button on it, so you're
right on target... I originally thought the wire was red in color
(typical male color-blindness), but now that you mention it, it does
indeed look orange. The white and orange wires are fused, the black is
not. Should I start with the 3 amp, or should I go a 4 (and what
voltage?)?

Thanks again for the help!

Hi, I have a Radio Shack scrolling L.E.D sign for sale. It has 5 programable message banks of 600 charactors each and an alarm message too. You program your messages in using the built in keyboard. It has 2 scroll speeds. The display is 1" high and 13" long. The whole unit is 3.5" high and 13.5" long. It can be used on the AC adaptor or the 12 volt lighter cord. I had it in my back window a few times letting people know what I thought of a local radio station that sucks and had a lot of fun and got a lot of attention. It is like new and sold for $179.99 new. Radio Shack no longer sells it. I am asking $80.00 + shipping for it. Please email me if you are interested. Thank you.......Doug

   Lets try explaining this again...........

     He says, that Local cops will have the authority over
F.A.A. officials........ Right, you keep believing that
Perry Mason...... Jesus, and these idiots have a license
to drive and operate on 2 meter. I would take away their
drivers license, because they don't know if their coming
or going.

Not really, it's usually just a series of
tone codes. I don't know of any around
here that are on the actual property of
where the owner lives.

John,

You are obviously looking for attention here. I wont give you all the attention you want, though I will say this.

If a "troll" is one who is old, frail, and grumpy, then you might be a troll. If a troll is one that will foolishly write the commissioners of the FCC telling them they are not doing there job, when you should be writing those to whom the FCC get their fund from, you might be a troll. If you are someone who has no other life, then you might be a troll.

"Recently some buffoons...," spoken like a true (troll?) politician wannabe. Are we suppose to respect you with this type of opening statement. Get real Johnny!

John D. Kasupski, KC2FNG, KNY2VS wrote in message

>public to be pretty much equal to the other. The public reads about

What does the public know about CB? They know what they use. Most (and I use that word hesitantly, due to higher percentages) people who use CB know that HAM is different. Perhaps not how different, but different nevertheless.

>individuals who behave as Flippo is alleged to have behaved, and gets
>the mistaken impression that this is how all Cb operators and hams
>behave. Thus my reputation is damaged, however undeservedly, by this
>perception on the part of the public. The same holds true for all

>I am sure there are many in both the ham and CB radio services who
>would love to try to repair some of the damage to our reputations that
>is done by behavior on the part of a minority of individuals who act
>as Mr. Flippo is alleged to have acted. We would like to help clean up

Im sure many CBers would love to act to keep those HAMs running illegally on the 11 meter band off also. Oh well, no mention of any HAM license holder irresponsible and illegal "alleged" actions.

>the Cb band so that it can again be a radio service that is useful for
>the purposes for which it is supposed to be used under Part 95. I

>both by me and by those users of the CB band who would like to see the
>band cleaned up, as I do.
>
>A couple of recent issues of Popular Communications magazine featured

```
>articles on what appears to be a somewhat well organized group of
>flagrant violators claiming to run mobile units with blatantly illegal
>amounts of RF power output - we're talking thousands of watts, in a
>band where 12 watts PEP is the absolute maximum allowable by Part 95.

Dont you think they know what the maximum is?

>This group can be easily found on the Internet - just read the Usenet
>newsgroup rec.radio.cb and you will find hordes of violators blatantly
>buying and selling illegal power amplifiers for use on the CB band,
>describing how to modify CB radios for illegal operation on
>unauthorized frequencies, advocating that others totally ignore Part
>95, and even advocating that people operate in the ham bands without a
>license.

Information for educational purposes on how to modify a radio is illegal?
Show me where, I must be confused, or skimmed over that line in the rules
and regulations.  Im not condoning the use, sharing, or spread of
information of modification.

>
>They even have a site on the world wide web: http://www.bigradios.com

No offense. Though this probably marks one of the only posts I agree with.
Funny, when a big fool makes an ass of himself how everyone comes together.

Johnny boy!

I have noticed you make associations with guns a lot. I am of course, just
for my own humor, recording all those that make reference to guns. Now, you
will see a troll my friend.

No, I for one am afraid that a gun using threatening pathetic hostile psycho such as yourself, would come to my home, with a weapon that could be conceived as life threatening. Then I would have to possibly.... well. You were right before, perhaps taking it to another group would be a good idea. Threaten me just a little John, but if you do, be sure to act on it. Im sick of recording your empty threats.

And why not Johnny? I say burn him at the stake! One foot is one foot, just as one watt is one watt, just as one percent of modulation is one percent, one decibel, blah blah. Damn you are just a hypocrite aren't you?

Thank you, thank you for running legal. Come give me a kiss now.

As I put force on the hammer then squeeze tight, I smell powder and loud sounds and then a red goo leaks. Take care.

Training, brainwashing, whatever you call it. They always ask that. It's
like going into McDonalds and asking for fries. "Do-you-want-fries-with-
that?". "No thanks, just the fries".

Well....here I go, setting myself up to get flamed, but.....
I was reading the posts about dealers with bad attitudes
and I normally don't post cause I get flamed and beat
every time I do, but here goes cause I can't keep quiet about
this topic. Here are some of the reasons I as a dealer have a bad attitude.
You show up at my house, when the shop is closed, regardless of the
day of week, or hour of day (I've had people come after midnite and think
nothing of it) to drop off a radio or ask questions.
You always want your radio repaired before everyone who was
before you, because we've done business together so long.
You always think I charged you to much.
You always want to buy your radio for below my cost.
Just several reasons I have a bad attitude.
Last but not least, everytime I poke my head up in the NG I get
flamed or blasted for my opinions.
Just one man's opinion, and not to say there aren't a lot of people
I really enjoy dealing with, and a lot of good people in this NG.

I hate to call anyone a liar, but I really doubt you talked mobile to mobile, AM on CB from NJ to Hawaii. The propigation properties of the 11 meter band (and the 10 meter band) just don't allow for that. It is not possible for the signal to make it at night because of the atmosphere. I think perhaps you were duped by someone telling you they were in Hawaii..

Are you sure when he told you he was on the big island, he wasn't refering to Manhattan?

Thats just because thier all experiencing the Internet. They'll be
back after they find out that the Internet is filled with so much
garbage it makes your head hurt. Its like every TV commercial
you've ever seen all at once.

Of course there are diamonds in the rough, just like CB radio!

Channel 55 (27.555) is patently illegal for CB use in North America but
it sure doesn't stop the Freeband DXers!

This last couple of weeks have heard the band from 27.415 to 27.995
going nuts.

I've *heard* myself stations from all over western Europe and western
Asia. The best times seem to be between about 9Am an 12Pm.

Uh, you better rethink that, when the 11/10 meter bands are open, as
they have been very often lately, it is easily possible to work those
distances with low wattage, on mobile antennas, and AM. Two or three
watts or even less, can get you halfway around the world with s-9+
signals under the correct propagation conditions. I have done it on
10-meters many times.

You may want to throw some money at your rig and antenna first. A better antenna will make more of a difference than adding an amplifier. Also check that your SWR is good. It sounds like you have a power mic so maybe you've got some clue as to what you are doing. Have you considered that maybe the stations in the background are ignoring you? By that I don't mean to be rude, but there are some really cliquey groups on the CB that ignore everyone that isn't one of them. Also, lately there has been a lot of DX coming in so the noise floor on the band has been high. If you have a good radio and a good antenna then I think you'll find that there are a number of good amplifiers in the 100W-250W range. These are illegal for use on CB in the USA, just in case that is a concern of yours. I gather the Texas Star units represent good value.

Every time you double the number of antennas, you half the power that each antenna receives. Think about it, you have to. The interaction between the two antennas suppresses the signal in certain direction(s) resulting in gain in the remaining direction(s). So if you extrapolate this, you can see that a 1/4 wave antenna is every bit as efficient as the most ambitious, multiple co-phasing arrangement you can think of.

Doubtful.

Nothing is going to offer you protection from a direct hit. A good ground will lessen
the chance of damage from a nearby strike. The current from this strike can be
induced into your antenna system from quite a distance away - and I mean half a mile
here. The general rule of thumb is for every 80 ft you go up, you are doubling the
risk of being hit by lightning. The best way to ground your station is at the base of
the tower with a 8ft copper rod. Use flat, ribbon conductor from the top of your
tower down and don't forget to ground the shield of your coax near the antenna. This
is easier said than done on braided lines. You could use an SO238 connector and a
jubilee clamp here. I would not recommend grounding your station in the house as this
will give a surge an alternate path to ground - inside your home.

I've seen it many times on this newsgroup. A ham and a CBer get in an
argument over the CBer running an amp, the argument always ends up
with the ham telling the CBer he should just get his jam license if he
wants to run power, otherwise he shouldn't run illegaly on 11-meters.
Hey, I agree with this statement, but the person is already running
high power and telling him/her to get their ham license as an
alternative to running illegaly on 11-meters is just a waste of time.
If they were so inclined they would have already gotten it!

>of as little power as necessary. That principle is supported by
>regulations applying to virtually all radio services, including Amateur Radio.

I never disputed this statement.

> Instead, Amateur Radio is about learning the skills of putting
>together a well-constructed radio station that can communicate over
>great distances without the use of excessive power.

No doubt.

> John, as we have explained in other messages, we ("the ham operator")
>also use CB radios, so this newsgroup also belongs to us. Why should we
>leave just because we also have have a Ham license?

If the ham operator can contribute something constructive to the
newsgroup then by all means stay. But, if the ham is going to
continually argue with the CBers about how they should stop running
illegaly on 11-meters and just get their ham license, then they should

probably stay away because this argument is not going to go anywhere.

> You have made this argument before, but I don't buy it. Would the
>problems increase if more people got a ham license? Most certainly.
>But I think that Amateur Radio can handle those problems. For one
>thing, there is no such thing as anonymous operation on the ham bands.
>The FCC has greater ability to monitor the Amateur Radio bands and many
>ham operators have RDF skills. By the way, this explains why CB'ers who
>operate illegally on the 10 meter ham frequencies are located so quickly.

I totally agree, but if the scenario occured on 2-meters like I
stated, I don't think there are enough ham operators around who could
monitor and control the millions of abusing radio operators. For
every offending operator that was tracked down, there would be 1000
more right there to take his place. This is totally hypothetical, and
I know it could never happen, but you can understand my example.

> Plus, most new ham operators quickly realise they have more to lose
>from illegal operation. In addition to the loss of operating
>privileges, there are serious fines involved. For many, once they

>privileges is enough to prevent them from operating illegally.

Hey I agree. I don't have a thing against amatuer radio. I also
don't have a thing against CB and I also that 11-meters has emerged
into a very unique band.

Okay, I guess I should clarify my statement. I myself do not think of the people on 2 meters as geeks. However, the general public, I'm certain do. Just as people who work on computers all day are considered computer nerds.

I see licensed amatuer radio more for people who would like to discuss scientific topics, although some certainly talk about the corns on their feet. And CB more for people who just want to talk, shoot the breeze, or make contact with each other.

Thats not true. The FCC simply meant that you should not key down
your mic all day long saying "Skip land, skip land, how 'bout ya skip
land. This is..."

Obviously they knew that people would occasionally be able to talk
over the distance limit. They just didn't want people being hugely
annoying to other citizens trying to use the band.

Roof mount base load

>Did you mount all the antennas in the exact location?<

Yes

>What was the swr of each antenna ?<

1.6 or lower

>lets here how scientific your test was conducted.<

There was nothing scientific about it. Real World application. 4 different rx'ing stations in diff. directions and distances. Checked barefoot (2w carrier), 200w carrier, and rx.

my question is why in the hell would anybody in their right fuckin mind want to talk on channel six ? bunch of fuckers up there talking and talking and what there saying doesn't mount to a hill of shit. now i know my receive is excellent , new coax, new antenna, and when i sent the radio to be aligned , the receive was done also. and all i hear is 100,000 or more muther fuckers talking at once. now i might be a lil ol fashioned or maybe even small town, but why on god's creation would anybody with anything above a second grade education wanna waste their time trying to wade through that bullshit. hey thats it ! i'm fuckin outta here.

Well, I find it very hard to believe that anyone could make a contact like that
on *AM* on CB with those distances.

My guess is the third is the memory wire. It should be connected to that battery
```

all the time. All this like does is save information in the radio. This in only
a guess mind you. I would have to see it for myself.

Amen! I even had them show up while I'm eating supper. Not only did they
want the repair for almost free they expect you to feed them while they
wait!
CTS <clip@epix.net> wrote in message
news:l_pT3.1010$AQ2.73514@news1.epix.net...
Well....here I go, setting myself up to get flamed, but.....
I was reading the posts about dealers with bad attitudes
and I normally don't post cause I get flamed and beat
every time I do, but here goes cause I can't keep quiet about

this topic. Here are some of the reasons I as a dealer have a bad attitude.
You show up at my house, when the shop is closed, regardless of the
day of week, or hour of day (I've had people come after midnite and think
nothing of it) to drop off a radio or ask questions.
You always want your radio repaired before everyone who was
before you, because we've done business together so long.
You always think I charged you to much.
You always want to buy your radio for below my cost.
Just several reasons I have a bad attitude.
Last but not least, everytime I poke my head up in the NG I get
flamed or blasted for my opinions.
Just one man's opinion, and not to say there aren't a lot of people
I really enjoy dealing with, and a lot of good people in this NG.

What a bunch of crap. There is no way you have contacted that many countries with the equipment you describe above.

Prove it. I want to see QSL cards from those 112 confirmed countries you claim that you have contacted with 25 watts and an A-99. I want to see a verifiable identification on those QSL cards (yours and the sender). In other words, don't go around downloading QSL cards off the internet so you can fill in your name and claim that they are your QSL cards. I want to be able to contact the sender for contact verification.

In fact, I'll accept just _FIVE_ QSL cards from anybody overseas, with a verifiable radio license, that will say that they have made contact with you on any frequency between 25.0 MHz to 28.0 MHz. I doubt that you have made even one overseas contact, so I really want to see that five out of the 112 you claim.

You can claim anything you want when you are operating illegally and therefore have no way to verify it. Heck, I can say that I've talked to 500 countries with my five watt CB handheld with nothing more than the stock rubber antenna. Of course, its a bunch of bulls**t. But no more bulls**t than you are spreading above.

You're a troll, Tim. I once thought you were something more, but you're nothing but a troll. You're credibility just went out the window with the claims above.

In answer to all that above, she can simply switch to any one of the other nine repeaters that she can contact from her office. If a repeater goes down, no problem. Again, reliable communications twenty-four hours a day, seven days a week.

I'm going to add a little more to this. She rides the ferry between Seattle and Bremerton every day. Towards the middle of the trip, there is a four or five mile area where cellular phones are useless - none of the cellular towers cover this area (it seems they were thinking about land use when they installed the towers).

My wife can just keep right on talking while all those cellular phones go dead. Her 2 meter handheld has more power and can hit the repeaters easily. Again, reliable communications twenty-four hours a day, seven days a week (even where cellular phones are useless).

> Been there, done that. The tech license is a beginners license. I have
> done more building, experimenting (antennas, not included. I do more with
> them at VHF and above) and such on 11 meters just because it is fun.

Again, what is your point? I've played with a lot of radio equipment also (including the CB equipment I had as far back as the mid 70's). Nobody has to give up CB radio when they get a ham license.

Why do you keep thinking that people have to choose one radio service over the other? People can have both and enjoy whatever they want in either. Even you claim to have tried both. So why is it so wrong for me to urge others to try it so they can judge for themselves if Amateur Radio is right for them?

Are you sure that you're not a ham radio operator that hates CB'ers and are trying to keep them out of "your" Ham bands?

> If you don't like CB, then go away.

I'm not going anywhere. If you don't like what I'm saying, then you go away.

Took a look at that page. It's not quite what I have in mind. What I have in mind, is to be able to use my copy of "Street Maps USA" which will provide latt and long for just about any city, town, and backwater in the US to find that information for whoever I'm currently talking to (or at least listening to while they work other stations) and feed

that data into a program that is live on my desktop (not
refer to charts on paper and then have to guess at the
heading if thier location isn't on the chart). I've been
working on the program already and have made a good bit of
progress and have learned a good bit in working on it.
Right now, it accepts the input of my coordinates and the
target coordinates (which with the aid of the before
mentioned map program can be as accurate as the other party
is willing to provide by telling me where they are, even
down to street intersections) and it calcs the heading and
distance for anywhere in the world as long as the points
entered aren't on opposite sides of the equator. The
formula I was able to locate on the web returns devide by
zero errors if the heading has to cross the equator.
However, as I am only a CBer it would be by pure luck that I
was able to work such a station anyway. As the program is
intended for my use anyway, and I'm not likely to need calcs
beyond my northern hemisphere, I think I can live with that
weakness until I find a better algorithm.

And, as you well know, Amateur Radio operators can legally use 1500 watts, Toll. But that does mean they SHOULD use 1500 watts everytime they open there mouths. And there are rules to that effect. But I already said all that in the message you quoted. You were just too busy trying to twist the other things I said to notice.

> To each his own, but I don't hear you spewing this shit in an amateur
> newsgroup.

I don't need to say any of this in an Amateur Radio newsgroup - it is already covered by the study guides for the tests required to get a license (so every ham operator already knows it).

What truth, Toll? Certainly not anything you say.

You ask above why I don't buy his argument? I explained that in the message you quote from - no anonymous operation on the ham bands, FCC has greater ability to monitor the Amateur Radio bands, and most new ham operators quickly realise they have more to lose from illegal operation.

But, of course, you know that. You spent the rest of your message trying to challenge each one of these assertions.

No place in my message did I even suggest "that if someone has a ticket, they are better than someone who doesn't." Those are your words, Toll. I have never said that in any message I have ever posted to this newsgroup, or any other newsgroup.

Boy, you really do get excited by all this, don't you? I'm sorry if I've said anything that would cause you to degrade yourself by using such crude language.

Yes, they get "busted." Read the November issue of Popular Communications magazine (pages 66 through 69). It talks about a "CB Freebander" who was recently fined $20,000 for "willful operation of an unlicensed radio station on 28.375 MHz, willful or malicious interference with an on-going amateur radio communications, and failure to make his radio equipment available for inspection by an authorized FCC representative."

The article states that the "CB Freebander" was discovered by Amateurs using "radio direction finding" and "close-in monitoring." The evidence also included audio tapes of the individual's transmissions.

The basic conclusion of the article - stay away from the Amateur Radio frequencies unless you can afford to lose $20,000 each time you're fined.

There is stepped up enforcement throughout the Amateur Radio bands. Anybody (and that includes Amateur Radio operators) who uses these bands improperly can face very stiff penalties.

By the way, this goes back to why I don't buy his argument mentioned earlier in this message. This increased enforcement is still another reason why I don't think his argument is valid.

I've pretty much decided to write my own. Once, a couple of years ago I saw a program that sort of did what I want. The only problem with it is it had no means of entering latt and long manually. It had a global map, rather small, and you entered coordinates by clicking on that map. You had to guess as to the location of the city in question. As I do tend to be mildly obsessive compulsive, the idea of guessing irritates me unless there's no other way around a problem.
I realize, that even with the most accurate calculations, a beam heading will be approximate at best due to the effects that everything from buildings, mountains, electromagnetic anomalies, etc can have on the way a signal travels. I use

a set of stacked three element yagi's. Stacked antennae,
have one strength/weakness in that their main lobe is much
narrower than that of a single antenna, requiring more
accuracy in aiming the beam. As soon as my rotator is
ready, it's in the shop for an overhaul as it was in service
for nearly 20 years straight b/4 I obtained it, I'll be
aiming the beams as close to geographic north as possible by
using magnetic north, then compensating for magnetic
declination to get geographic north.

Anyway, as I sit here listening to my closest neighbor's
ignition coil on my CB Channel 13, I realize that it's time
for me to start getting ready for work.

Later

John Jenkins wrote:

> Okay, I guess I should clarify my statement. I myself do not think of the people on 2 meters as geeks. However, the general public, I'm certain do. Just as people who work on computers all day are considered computer nerds.

Man, than I'm really in trouble - both radio and computer. :-)

> I see licensed amatuer radio more for people who would like to discuss scientific topics, although some certainly talk about the corns on their feet. And CB more for people who just want to talk, shoot the breeze, or make contact with each other.

Thats why Amateur Radio is so great - there is enough room for all. There is room for the people who what to debate the use of bakelite insulation versus plexiglas insulation on variable capacitors, or the benefits of using Romex cable over number 8 copper wire in a grounding system.

And there is room for those who just want to sit back and have a good conversation about whatever fits their fancy at the moment. There are at least 50 repeaters within the range of my base station. Every night there are discussions relating to just about everything.

If I get bored with that, I can drop down to the simplex frequencies. Or the SSB frequencies. Or the packet frequencies. Or I could even try another band.

I'm also the communications officer for the local Coast Guard Auxiliary Flotilla, so I could pop over to the C.G. frequencies to see what is going on there (my radio was legally modified to operate on these frequencies - MARS/CAP/CG mod).

Or I can turn the whole thing off and see what is happening on the CB.

Talk about radio heaven. I don't have enough time in the day to cover everything.

Well, enough preaching. Take care, John.

Just because you can't to it with your trusty HT doesn't mean that a CBer can't, either.

Please see below:

> > why dont it compare? when CB was a ham band it was the most productive band

> > no dx band.
>
>   What a bunch of crap. There is no way you have contacted that many
> countries with the equipment you describe above.

Why not? Skip to Europe is not uncommon at all on the east coast and from Texas... I have done it with an export radio and a pair of Van Ordt Power Stick antennas.

35 watts PEP, 5 countries in about 15 minutes.

If you think it don't happen, you better pass the code and play with 10 meters. Your total lack of understanding beyond what Gordon West taught you is showing agian.

>
>   Prove it. I want to see QSL cards from those 112 confirmed countries
> you claim that you have contacted with 25 watts and an A-99. I want to

> internet so you can fill in your name and claim that they are your QSL
> cards. I want to be able to contact the sender for contact verification.

So, in other words, you want to see an Alpha Tango directory.

If you would open your eyes to the rest of the stuff that is posted in this newsgroup, you would see that DXpeditions are scheduled, people run scheds, the whole 9 yards.

Just too much for you to comprehend that a bunch of CBers do this, when you didn't know about it, and had to get a ham license to ATTEMPT to do the same.... Maybe you should go all the way and get that Tech Plus ticket!

>
> In fact, I'll accept just _FIVE_ QSL cards from anybody overseas, with

I will accept 5 people with verifiable radio licenses operating illegally.

Found a way out with wording, didn't ya Dwight.

Don't try to be a lawyer. People here won't cut you any slack. Your acting like an ass, and we will call you on it.

>
> You can claim anything you want when you are operating illegally and
> therefore have no way to verify it.

And you can claim anything you want when you don't know what you are talking about... And that really seems to be the way things are going around here.

The no coders come to rec.radio.cb They tell the whole world that all the CBers that operate on the "freeband" should ceast and desist and run to VHF where they will be legal.

Sorry, but the whole world doesn't fall to the drivel on the ARRL.

Heck, I can say that I've talked to
> 500 countries with my five watt CB handheld with nothing more than the
> stock rubber antenna.

That's real believable.

Of course, its a bunch of bulls**t. But no more
> bulls**t than you are spreading above.

Right.

>

So, then your saying that you would rather rely on other peoples equipment.

O.K., I guess for the technically challenged, that would be the best.

If a
> repeater goes down, no problem. Again, reliable communications
> twenty-four hours a day, seven days a week.

Right.

Sorry, I have been in the outback of Southern Utah when repeaters go down.

As a matter of fact, we had an entire site go down, taking all the local
repeaters.

Not uncommon, either, when you consider that the amateur radio repeaters
usually share tower space and electricity with other licensed services.

Who do you think is going to win for precious generator power when power
goes out at a mountain top site?

>

But they have to give up operating the way that they enjoy according to you.

>
>   Why do you keep thinking that people have to choose one radio service
> over the other?

I don't. You are the person who keeps telling everyone that they should get
their ham license and stop oeprating the way that they enjoy, in a band that
they enjoy.

  People can have both and enjoy whatever they want in
> either. Even you claim to have tried both. So why is it so wrong for
> me to urge others to try it so they can judge for themselves if Amateur
> Radio is right for them?

Absolutely nothing. Just stop being an arrogant asshole about it.

>
>   Are you sure that you're not a ham radio operator that hates CB'ers

I didn't say that a well-grounded metal pole would achieve "a better match." I said "best PERFORMANCE can be achieved by installing the antenna about forty feet in the air on a well-grounded metal pole." I don't know how I can say that more clearly.

As for the need for a well-grounded metal pole, virtually all antenna systems require a good ground for best performance (certainly this antenna does). Unless you run a wire down from the antenna mount, the only way to achieve that ground is through the metal mast.

And, as for guy wires, of course they have to used with a metal pole. Therefore, I didn't think I even had to mention them.

> >   The GPK-1 ground plane kit will slightly improve line-of-site

> and how will this lesson the performance in DX?

Experience, Kavorkian. That is how I know the GPK-1 ground plane kit will "slightly improve line-of-site distance, but will slightly decrease skip performance." I have been using this antenna for years, both with and without the GPK-1. And you probably already know that I have this antenna right now.

Hand held radio's serve a purpose outside. You will not be able to communicate with just the radio inside a car. You will need to attatch an outside antenna, mobile or base to the unit to talk. It will work as well as any stock radio will work.

Depends on who you have around you and what you have around you if you will be heard. Good luck. They were designed to be used in the woods.

Any input on this would be welcomed! What is the other radio, that is
supposed to be the same as the HTX-10, except modifiable.........the
Magnum??? Thank you very much.

Oh sure Lowtower, ..............If you believe that line, Ive got a
beautiful piece of swampland
in Florida that's just right for you.

What's that matter, one of your "glass house" buddies got caught with a
boulder in his hand? The one thing that most Hams and CBers forget is that
EVERYONE has some sort of skeleton in their closet.  Whether they are "born
again" or not doesn't change anything..........

Joe,

I read your post, and you seem like a pretty smart dude. Use some of those smarts and don't just jump on the popular, all cbers are evil, bandwagon. I promise you that for every 1 badly tuned, splatter box, out of band talking butt muncher on the CB there are thousands that run clean stations. Among those thousands that run clean stations, fully two thirds to three quarters of them run high powered equipment.

An amp on the CB is like a sports car on the highway. Some people fly down the interstate, barely in control of thier car, endangering everyone. Most, however, fly down the interstate in complete control endangering no one. It is pure stupidity to even attempt to write everyone who exceeds the posted speedlimit a ticket. Those who advocate such tend to be angry and bitter because they cant spend the $$$ to afford such a nice ride. The same holds true for many of the whiners who advocate eliminating amps from the CB. They can't afford the $$$ to obtain well built clean sounding equipment (or modify thier existing equipment to make it so) and they're bitter and angry about it. That's the same mentality that has led to our public schools being the laughing stock of the world. We spend more $$$ per student than any country in the world, yet out public education system lags behind in nearly every measurable way. Why? Because those who aren't intelligent enough to make good grades hold the rest of the students back. They do this by calling high standards unfair and bitchin and whining about them until the standard is lowered. Once the standard is lowered, they can feel good about themselves because no one is making better grades on average than they are. On the same token, eliminating all amps from CB will lower the bar, so that those who do not have either the will, or the $$$ to do better can feel good about themselves because they don't have to listen to better sounding, clean, loud radios which make their equipment look and sound like the junk it is.

As far as talking out of band. Again, I say that those who do so are an ultra small minority. It just seems like there's a disporportional number of outbanders from CB because the outbanders are the ones you hear bleeding on your 10 meter band and because even if outbanders made up only 0.5% of the users of CB they'd quite probably come near to outnumbering hams in sheer numbers. I'd be very surprised if there was a non-ham house in the US that doesn't at least have an old CB in the attic left over from the CB boom in the 70's. If you want some proof that the vast majority of CBers remain within their forty channels take this into consideration. We'll use my equipment as an example. I run a set of stacked three element yagi's made by Hygain. This antenna, typical of most CB antennae isn't designed to be broadbanded. SWR starts to climb fairly rapidly if you get outside the 40 channels. My antenna is tuned toward the lower end of the CB spectrum because that's where I stay most of the time. As a result my swr climbs faster on the h igh end than on the low end. Just to see what happened, I checked SWR above 40 and it got above a 2 at around 27.655, still plenty far enough away from 10 meters to not bother anyone. I, and I feel like most people who run amps feel the same way, find tubes to be too expensive and hard to find to be risking them by transmitting with such high swr. As a result, even if I wanted to key up there, I'd definitely be low power. The 6LF6's in my amp are way too hard to find. On the low end of the spectrum I can get as low as 26.255 b/4 my swr's start climbing to unacceptable levels. This being the case, probably with most actual cbers, I postulate that all of the people who are actually opeerating illegally on 10 meters aren't CBers at all, but pirates who've modified CB equipment, especially the antenna, to the point that it isn't CB anymore. Go after them, leave the real cbers alone just like we leave you alone. CBers are picked on enough as it is. Even a completely legal CBer will always lose if he's bothering someone's TV or phone, something that is easy to do given the low quality of consumer electronics sold these days. Yet, a ham license offers you guys protection and some imagined air of authority in the eyes of individuals, and the FCC will back you guys up when someone complains against you.

I know that. But at least in our case, the repeater is sitting in one
of our homes. If he shuts it down, it will be by the off switch.

Our repeater also mutes DTMF tones, so that in order to "capture" them,
you would have to be in range of the input signal. We also have a
control link that is on another band, which is the prefered way of
"doing business" with the repeater. There are no tones rebroadcast on
the output.

Well, now you do. Our 220 machine is at the home of my co-owner (Who
happens to be 500' ASL). While we can turn it off with DTMF tones (Which
do not get rebroadcast over the output), he has the option to just flip
the switch.

Wildcat wrote:

> Johnny, I read your letter and I couldn't help but notice a couple of your statements. In your letter to the FCC you said that you have recently become a new Ham, after years of being a long time CB operator. I then went to QRZ and looked at your date of birth, which states that you are about 41 years old. This is my question:
>
> Why, after all of this supposed time spent on CB, are you all of a sudden infuriated with illegal CB activities, and why did it take you 24 years to get your Ham license? (your KSO-9650 CB call is from Aug/1975) There was more illegal CB activity in your area of NY in the 70's than there is right now............why the all the NEW concern?

Wrong. Plain and simple. While here may have been a handful of "experimenters" back in the 70's, who had a few extra channels, or a little "footwarmer" under the bench, these same people weren't on the air cussing, jamming legitimate QSO's, playing musical noise toys, or (over) using echo mikes. That is something that has gotten out of hand in probably the last 10 or so years.

Again, remember, it's not the guys who run responsible power, it's not the guys that run freeband DX, it's not even the guys who get together and have fun at keydowns. It's the "people" that have no respect for common decency, and other people's rights. THOSE are the ones that are ruining CB.

Dave

I'm not so sure. I've had a discussion with another ham about how great the internet is, and how much better is is for communicating than ham radio. He spends most of his time on internet phone, and video chatrooms and such. Yes, you can connect anywhere in the world with the internet, and do many things that you can't easily do on radio. But to me, radio is more fun, becasue it doesn't involve a phone line.

This same ham was demonstrating how he can listen to radio stations over the internet and play CD's, and to me it's more like" Gee, you've just shown me a $2500 radio and CD player, wow!"

That same problem exists on the internet as does on CB. The lowest common denominator can get on the internet and ruin the fun of many other people, simply because the internet is easy to access. There seems to be an ever increasing number of anti-social, deviate people in this country. Maybe they should've had a good spanking instead of being sent to "time out"(What a ridiculous concept IMO), when they were kids. Whatever the case, as long as these people are attracted to public forums, they will do their best to wreck any harmony and order that may exist, just for their own pleasure. Other people's misery is their pleasure. I have no tolerance for people like that.

>

The thing is, you can tolerate most skip interference from legal power stations. I have rarely seen the S meter climb above S9 while legal stations skip in (Usually it's between S5 and S8). It's when the "big guns" fire up, I get +20 over signals, and the noise level rises to S9 or more.

That's why when I used to work DX,(Many years ago) I'd go for the cleaner outband channels. While the "Kilowatt Kowboys" battle it out to work a few states,on the regular 40, I used to work South America, Italy, Europe etc, with 25 watts SSB on the freeband.

The FCC distance rules are useless on a band that permits worldwide DX. The CB band should have been assigned somewhere above 50 MHZ (Maybe in the 72-76 Mhz space). But that's water over the dam now.........

Dave
"Sandbagger"

its not neccesary to come right out and say something. we can read your intent behind your post and your words.

> No place in my message did I even suggest "that if someone has a
>ticket, they are better than someone who doesn't." Those are your
>words, Toll. I have never said that in any message I have ever posted
>to this newsgroup, or any other newsgroup.
>

> Yes, they get "busted." Read the November issue of Popular
>Communications magazine (pages 66 through 69). It talks about a "CB
>Freebander" who was recently fined $20,000 for "willful operation of an
>unlicensed radio station on 28.375 MHz

1 out of a million!!!! wat to go riley!!!!!

> The article states that the "CB Freebander" was discovered by Amateurs
>using "radio direction finding" and "close-in monitoring." The evidence
>also included audio tapes of the individual's transmissions.
>

just in case you didnt know that case happened right here in Toll and i's back yard. were familiar with the case. the guy was caught because he was a ham not just because hes a freebander. we have many freebanders and amp users here in houston that the FCC didnt give a shit about when they busted that guy.

> The basic conclusion of the article - stay away from the Amateur Radio
>frequencies unless you can afford to lose $20,000 each time you're fined.

the guy was using 27.535, and 27.370 or something like that. he wasnt on two meters.

> By the way, this goes back to why I don't buy his argument mentioned
>earlier in this message. This increased enforcement is still another
>reason why I don't think his argument is valid.

this increased enforcement is similar to the war on drugs. its all fantasy and public relations by the FCC.

>Dwight Stewart
>Amateur Radio, Technician
>F.C.C. License: W5NET
>http://www.qsl.net/w5net

still a joke.

i tell you what toll. this guy is a real ass. i'm gonna call him on his bluff. 112 is impossible? what about my friends in europe with over 200. i'll pick out my best 5 and send some photocopies on there way top mr dwight today. maybe we'll have a new freebander dxer on our team. ps if you want toll i have the 99 AT and SD directory on a text file that i can send your way. theres about 6000 members listed for both groups. just let me know.
ps. dwight when you get the photocopies in the mail your ass better come to this group and admitt i was right. and if your thinking about sending them to the fcc i dont care about that either. i'm already listed in the directories of so many groups already. you should follow the links on my signature and see what the dx is all about

I agree with everything you stated 100%. A few things you forgot to add were
the questions they have about items they have bought from some other CB shop
that the CB shop was unable to answer because they just sell things, and if the
product is any good!!! When you ask them why didn't they come you in the first
place they have a million excuses as to why they didn't. My policy is now - I
will be happy to answer all questions re. items purchased from me ONLY!

These were public address system microphones used in schools and the like. They are dynamic mic's which when attached to a radio with a built in preamp, dont sound too bad. They should look just like a Turner +2 preamp desk mic (with the shark fin on the top).

ok dwight, hows this. i'm sending you photocopies of 16 qsl cards(your not worth anymore than that) i recieved from last cycle from different parts of the world that i happen to have on hand because another person asked me to do something similar not too long ago to prove i wasnt bullshitting. Africa, Europe, South America, Oceania, and Central America. I bet after you see all these youll be wanting to freeband ha ha. better tell me now if your address on qrz.com is right or not because i'm sending it there. hope you like the taste of shit because youll be eating some.

> Anyone have plans or tips for building or buying direction finding
> equipment?

Just build yourself a 1/8 wave directional loop antenna (in the shape of a lollipop) and spray one side (1/2) with Teflon spray. Then just follow your S-meter for peaks. When you get close to the area, start reducing your RF gain. When you get in the neighborhood of the subject, disconnect your antenna from the back of the radio and raise the RF gain to the max. As you get closer, reduce the RF gain to zero. Once you get peaks with the antenna disconnected and the RF gain at zero, you should be within a few houses of the party you are trying to track, which all you have to do is start looking for antennas on roofs.

If you really want to get technical, you can build a couple of "Active" antennas which use triangulation to determine the location of an emanating radiowave. (This is the method the FCC uses along with aerial photography)

>Incidentally, they DON'T ship converted radios, they are all 10 meters, and......"

Up until THIS Year they used to allow "anything" in if it was a 10M radio, as long as it didn't have 11 in it. But I have seen the FCC citation given to the Truckstop in Maryland 2 weeks ago. The fcc now considers (they put this in writing) most 10M rigs as "designed for primary operation as a CB", and as such they are taking the attitude that they are non-type accepted CB equipent. The truckstop was cited for NON-Modifyed 10M Galaxy radios. They(FCC) also mentioned in the citation specifically that they tested the RCI 29XX series & Galaxy 10M radios in their lab & found them to be "designed for & easily convertable to" CB radios. They seem to be using the premise that the rules state "Equipment designed for" Citezen's Band use must be type accepted as a CB Radio & they are now interpreting that to include most current 10M rigs. In a related incedent earlier this year, the FCC would not allow a shipment of Mirage RCI-2950's into the country, using this same logic. I think the Mirage people here are starting to use the name "VIRAGE" on some radios since this incident so as not to "flag" anything looking for Mirage on the packing lists.......

Things are going to be changing...........

Are you working out of your home? If so, you're going to get that no matter what business you're in. Try isolating your business from your home and treating your customers more like business customers. Here are a few things I've tried, or seen other try.

First of all, isolate the business from your home. Put your business in a separate building if possible (a garage, shed, etc.). Put a big sign on the door with your business hours. And never handle customers after business hours (simply say that you are closed).

If you can't move out of your house to another building, at least give your customers a separate entrance and again put a sign on the door with the hours. Put a sign next to your front door (the private entrance) saying something like, "customers - use side door."

In either of these cases, never take your customers into the private living area of your home. They are your customers, not your friends. Make sure your customers understand this relationship right from the beginning - your home is for friends, the business location is for customers.

And make sure your friends, who you don't mind helping after business hours, understand that you are doing it just because of the friendship. Tell them that the rules still apply to all other customers (including their friends).

In your business location, establish clear separations between yourself and your customers. Put up a counter, and don't let customers behind the counter (another sign will help here - including a plastic chain across the entrance).

If you repair equipment, don't let your customers into the shop area. Place it within view of the customer, but make them wait on the other side of the counter while you work on their equipment.

Don't let your customers know that you work on equipment after business hours. If a customer comes in five minutes before closing, take the item and tell them that you'll start on it the next morning (even if you do repair it later that night).

And never work overtime on any customer's equipment. If you don't respect your business hours, how can you expect your customers to respect them? When it gets close to closing, tell the customer that you're not going to be able to finish it today, and that you'll finish it tomorrow.

I would even recommend dressing differently while at work. Put on a lab coat and wear a name tag. When it is time to close, taking off the name tag, the coat, and slowly turning off the lights, is a good signal to your customers that it is time for them to leave. Beside, dressing for business presents a more professional business image.

If they still hang around, waiting to walk back to the house with you, after you exit the business and lock the door, now is the time to be blunt. Say something like, "thanks for stopping by. We'll see you tomorrow. We open at 8am."

Establish fixed prices and post them in clear view. If you sell equipment, and have samples, put them in a display area with the prices clearly marked. For your repair prices, post prices for common repairs on the wall behind the counter. And stick to those prices for all customers. Most customers will only ask for a discount once. If you don't give in, they will seldom ask again.

Also remember that your customers, in a radio related business, talk to each other on the radio. If you give one customer a special price, he is going to tell everybody he knows, and they are going to expect the same price. If you give a friend a special price, make sure he understands that - give him the price for regular customers and ask that he not mention to price you gave him to others.

The same applies to your regular prices. For example, if you charge one price for a repair today, you cannot honestly expect your customers to be happy if you charge them a different price tomorrow. Item sales is a lot easier. Raise your prices with your purchase cost, and explain to your customers why the price went up when asked (your price went up, so their price went up).

If you truly establish yourself as a business, it will make it much easier for your customers to accept the prices you charge. After all, people don't usually argue with WalMart over price, do they?

All of these things work. Several people in my family are self-employed. For example, my mother has been working out of her home for more than twenty years. I learned most of these things by talking with them (I plan to run a business out of my home one day).

In the days before SSB, hams did it all the time on 10 with AM, and if
you can do it on 10 there is no reason you can't do it on 11 meters. I
once worked a guy in Hawaii on 10 meter AM and he was using a
walkie-talkie running 3 watts.

Well Tim, as much you think this guy is "James Bond" or "The Jackal", no-one around here has heard of him. We were on the radio last night talking about this guy and no-one else knew of him either. The whole state of RI is about as big as City of New York which means everyone knows just about everyone else around here. I work Europe on the lower side of 47,48,51 and 55 everyday and Ive yet to hear this super villain. Also, anyone with 10 minutes and Microsoft Publisher can have a web-page.

Just because you occasionally hear someone from around here doesn't mean they are the Capo di tutti capi...........this guy is a NOBODY.

More likely than not neither will ever happen. Over the past 30 years Ive found that most "radio tough guys" are usually sniveling wimps in person.

Dave, I dont know about where you live, but people were swearing, playing music, meeting up with each other to duke it out, pinning and tearing coaxes off of other peoples houses, and using Fender guitar amplifier reverbs as echo boxes 30 years ago where I live. These instances are nothing new to CB radio and have actually dissapated in my area of New England. Mr. Kasupskis problem is that he just got his Ham license after 25 years of CBing which makes him believe that he has been knighted a radio-cop.............How fast they forget. If CB pissed him off so much, why didnt he get his Amateur license 20 years ago and more importantly, why is he still wasting his time on CB? When I got PO'ed at CB 24 years ago, thats exactly what I did only to find a different kind of nit-wit on the Amateur bands.

His problem is that he thinks his new license has made him "born again".

>THOSE are the ones that are
> ruining CB.

No-one is ruining what is already ruined...................You'd have to go back to 1958 to find CB purity.

Can someone please tell me when they refer to an amp as a hard drive what does this mean? I believe that Texas Star has a few amps like this. One is called the Killer Bee DX 250 HDV.

Thank you,

Gunsmoke

thanks johnno. i appreciate you allowing me to use your call sign last night as i did some bootlegging on 2 meters . i hope you don't mind. i did get into a verbal altercation with a couple of good buddies however. and i will have to admit , i was a bit tipsy, if you will. and i probably said some things i shouldn't . it would seem that the two meter crowd doesn't appreciate the finer points to 'too short's' musical rendetions as only i the great one can. so next time i use your call sign, i think i am going to play some ice cube music. yeh that's the ticket. anyway thanks for the use of the call sign, like i said johnski and i hope i didn't cause you any problems,.....icm out.......

Sorry you have a reading deficiency, Landshark. I thought I explained it fairly well. But obvious you still don't get it, because I never said what you said above. Perhaps you can have somebody else read it for you and then explain it to you.

Worked just the opposite for me both times I tried the GPK-1 ground plane kit. It reduced skip contacts, but increased my signal level over line-of-sight. I thought I was just imagining things the first time, but the second time I had a another A-99 sitting twenty feet away that I could switch between. Several skip contacts reported lower signal levels on the one with the GPK-1 ground plane kit. I have not used the GPK-1 since.

Well I know it's possible to talk overseas on 11 meters. I've
done it. Lots of times. On SSB it's easy. One day I was talking
to California, when someone mentioned they heard the UK. My antenna
is on the back of the vehicle, so I did a 180 and called for DX.
Got an immediate response from over the pond. I like the challenge
of AM. It's not as easy on AM from the mobile. Just yesterday
I talked to a fella in Louisiana on CH 13 AM. Didn't even have
to try. If a 2 pill is a big radio, you need to get a clue. I don't
use class C splatterboxes and I keep my radio clean. I hate to hear
"10-9!" I've spoken to CA in the past month on AM from the mobile.
Don't say it isn't possible, because I believe it is just like so
many others on this NG.

Perhaps that is true, but he claimed contact with 112 countries. There are not 112 countries in Europe, nor are there 112 countries within the range of any CB radio in this country, no matter how much power it was running or how good the skip conditions are. So, like I said, impossible.

> Just too much for you to comprehend that a bunch of CBers do this, when you
> didn't know about it, and had to get a ham license to ATTEMPT to do the
> same.... Maybe you should go all the way and get that Tech Plus ticket!

Too much for me to believe because of my own personal experience. I've been using a CB since the mid 70's. And yes, I've listened in on the freeband frequencies many times. And even if I were to contact every single overseas station I have ever heard on those frequencies, I could not come up with contacts in more than a few countries. It is absolute nonsense that a person could make contact with 112 countries.

> I will accept 5 people with verifiable radio licenses operating illegally.
>
> Found a way out with wording, didn't ya Dwight.

Not a way out, Toll. Just the facts. As long as he is running illegally, with fake ID, he can claim just about anything he wants. But that does not make his claims valid.

In fact, even if he were to have QSL cards, we have absolutely no way to verify that they are his, or that he got them from actual radio contacts with others. Anybody can contact people overseas on the internet and ask them to send a QSL card. Try it. You can get a great collection of QSL cards in just a few weeks. Then you can claim that you made contacts with 112 countries also.

True but if I came out and saw somebody in my backyard messing with my power box you would not walk away.........In fact his happened to a fellow CBer. Some idiot started to cut his power after he pissed him off on the air. He came out and shot him with a 12 Gauge from 10 feet away.. Never did any Jail time..

True story

The george hands down. 52 real watts. A RXer that is twice as good as
the 2510s on SSB and more features than you will ever use...

Back when I was just a wee-folk.... I had a CB 'walkie talkie' from
Sears. Two channel, but fairly full featured with squelch and a
sensitive front end. A friend and I in 4th grade each took
'curtain rods' and 'wrapped' them to stick to the chimneys on
our house. We didn't even use coax, just a lentgh of phone
wire (solid wire, a single strand) to get from an aligator clip with
a big screw on it to where we soldered it to the curtain rod.

Now, this was the early 60's, and there wasn't near the traffic on the bands then, but occasionally we'd hear skip, and a few times even talked to people. We even carried one of our antennas up to the mountain top near where we lived and put it high in a tree to try it.

When it's open, it's open.

About 1978 or so, I lived in Bethlehem PA, and talked car to car one saturday morning with a stock CB set with just a mag mount to a friend in Lubbock TX. Everything legal, other than the distance. This was SSB.

Like I said, when it's open, it's open.

And when Radio Shack came out with the HTX-100, I had one in my car, and on LOW power, I worked two stations in a 3-way, me in Mass, one in the former East Germany, and one just outside of Moscow. The contact ran for over 20 minutes as I was mobile on I-495. Just after I pulled into work, the band deteriorated, and I had to go high power (wow, 25W PEP!) to sign off.

When it's open, it's open....

What you need to realize is that the results you got where due to many, many factors. Some of which are terrain, the cars ground plane, other station you where talking to, The power you used, and SWR. This is a great test to see what will work better on that Car or truck. As for being a solid test on which antenna is better this is a poor test. I have done similar tests. but I have realized that my results are MY results. Sometimes certain antennas work better on certain cars. The 102 is a good antenna if you can put up with the length. I personally like to use a 1000 or 5000 mag mount. for under 1000 watts of power. On my friends van the best turned out to be a Muddy waters slapper(big coil keydown style antenna). It beat several other antennas. Guess what was the closest? A $17 Shakespeare 102 whip. The only reason we run the $100 Slapper is the power handling. He is running 2kw and the whip worried us...

Tests like this are fun and informative but please remember that there are so many different factors that are involved when you just switch and antenna. Oh next time use a radio with a Variable RF power control and use an AM carrier calibrated on a watt meter. Some radios will produce different power levels into different loads. This got us several times... The carrier would change and skew the results......

MC Turner

I have found that both the 1000 and the 5000 work better as a Mag mount than a
roof mount.  I really do not know why but in both cases Reflected power jumped
way up when the mag mounts where tossed and the hole was drilled to solid
mount them...

>
> >Did you mount all the antennas in the exact location?<

You really need to tune each one to exactly the same point or at least note
each antennas reflected power and SWR so you can review that info as well..

>
> >lets here how scientific your test was conducted.<
>
> There was nothing scientific about it. Real World application. 4 different

>

I am hopping you used a watt meter and adjusted the power to exactly the
same. If you did not the results are worthless. Also if you really want to
get into this you can hook a AC volt meter to the RXer at the base side and
note actual Volts in the IF gain stage so you are not dealing with a cheap S
meter and an AGC circuit. Many CB radios S meters are not linear. They might
exaggerate the signal at the bottom side but hold it back on the upper.

See ya

The other guys that posted have good advice. If it is the relay then take a piece of scotch tape and rap it around the coil to insulate it. Over time the relay will magnetize and cause it to stick. #12 told me this trick and it has since fixed two amps...

MC

Skyrider Defiant wrote:

> Hi there:
>
> I have a 1965 Cobra Cam 88. Recently, when I key down the mic. The transmit/receive relay just pulls down about half way, causing the rig to oscillate between transmit and receive. If I manually push the relay all the way down, it goes into transmit fine. I've cleaned the relay to no avail. Does anyone have any insight into this problem? It doesn't look like I'd ever be able to find another relay for replacement, short of a parts rig, so I hope it's something else.

Don't waste your time, Tim. My demand for proof was rhetorical. First of all, you could send me all the QSL cards in the world, complete with certified letters swearing to their authenticity, and I still would not believe they were authentic. I do not believe that what you are claiming is possible, so any evidence to support that claim would obviously have to be fake.

Second, even if your claims were true, I'm not going to validate your illegal activities so you can go out and urge others to break the law. And I would never attach my name, or callsign, to the authentication of any illegal activity.

So, feel free to post your claims to this newsgroup all you want. If people want to believe you, that is their business. I don't.

Well, we can all make claims that we talked anywhere on anything. 10 meters is a lot different from 11 meters.. lots less noise, more courtesy and better operating practice.

I'll repeat what I said before, Tim. Don't waste your time. My demand for proof was rhetorical. First of all, you could send me all the QSL cards in the world, complete with certified letters swearing to their authenticity, and I still would not believe they were authentic. I do not believe that what you are claiming is possible, so any evidence to support that claim would obviously have to be fake.

Second, even if your claims were true, I'm not going to validate your illegal activities so you can go out and urge others to break the law. And I would never attach my name, or callsign, to the authentication of any illegal activity.

So, feel free to post your claims to this newsgroup all you want. If people want to believe you, that is their business. I don't.

Ah, conspiracy theories. Everybody has a dark, secret, motive behind what they say. Everybody but you that is. But thats alright, you can read between their words, and are going to expose what they are really saying to the world.

And there are a million freebanders sneeking around on the 10-meter Amateur Radio frequencies. Man, what a mental world you live in.

Get your facts right, Tim. The guy I'm talking about, William Flippo, lives in Jupiter Florida (not the Houston area).

And according to the FCC, he was not a ham operator. The magazine specifically says that one FCC official described the individual as a "freebander."

> > The basic conclusion of the article - stay away from the Amateur Radio

I specifically said that the guy was caught operating an unlicensed radio station on 28.375 MHz, which is in the 10-meter ham band. That was even quoted by you in your message.

Tracy.... AB7RS,

Sorry, but 2 quarter wave antennas at the usual 1/4 wave spacing do not produce an omnidirectional signal! This particuliar configuration produces an elongated figure 8 pattern at right angles to the plane of the array!

I'm putting the old Silver Eagle 200 up for auction. It was my first heater and served me well. Now I'm looking for something better. A friend of mine has a Palomar Elite 100 which I really like, but I can't find them. Are there any amps out there that are comparable to the Elite 100? If not, whats a good box to get thats under 200 watts, has an RF pre-amp and draws low, 12 or less, amps? Thanks.

Yes the original subject was "would being close to a tree cause problems?" I was replying to the posts that were made about ground affecting the antenna. And the answer to the "tree" part of the question isn't always NO. I have had antennas that change tuning by the change in seasons "leaves to no leaves condition" It depends on (for the most part) how close the high voltage node of the antenna is to surrounding objects.

On 01 Nov 1999 22:19:07 GMT, zeroeightytwo@aol.come (Unit 082 Tim) wrote:

>50' push up pole, the match was the same there as it was on the 5' pole on
>the ground.

Your point is proved in your location for you. Doesn't mean that it will hold true for every location.

>So my point was still proved, how many times have you had this problem with
>an Anton? I personally know that a tree would affect it because of its
>location as opposed to the radiation pattern of this antenna,

Are you talking about the tree being in the plane of the radiation pattern? I have seen this with many different antennas.

>Hightower why dont you explain to the group how the earth would affect this
antenna,

Not just this antenna, but any antenna that's ground mounted. An antenna that's ground mounted is affected more by ground conductivity than one that mounted 1/4 wave or higher. Thats why you see AM broadcast antennas mounted in swampy or low lying areas. The ground conductivity is better, and moving the same antenna to a lower ground conductivity would not only effect the efficiency but also the tuning of the antenna.

> but say guy wires at the base of the Anton would not, also explain to me how
>tuning (as John put it) would help an antenna that was reacting to something
>close by,

If the antenna is reacting to something close by, say a tree acting like end loading. Why do you think that tuning wouldn't help?

> Now I could understand if John had said something about matching
>the antenna, inductance, capacitence etc. etc., but he told the guy that
>"some tuning might be required" all he did was point the guy in the wrong
>direction,

Any time you move an antenna to a different location "some tuning might be required" Thats a perfectly valid statement. Why don't you see antenna manufactures pre tuning their antenna and including in the paperwork a notation "This antenna was tuned at our location, no tuning will be necessary when installed at your location"

> It sure is funny how you post so little, but when you do you
>stick your foot in your mouth taking up for a asshole whinebag, who instead
>of helping someone out only confuses people.

I really wasn't taking up for anyone, I was responding to your post that height above ground wouldn't effect the antenna.

I always thought the 1000 was a good antenna but the ? was "for the price",and a 102" is very inexpensive.Even if they were the same price I doubt the 1000 could beat a full 1/4 wave.

Rig Doctor,

A pair of antennas properly fed at
1/8 wave spacing will produce an omni-
directional signal, as well as provide
gain over a single antenna!

Rant Time:

How long did it take you to pull this out of your butt?

Spraying one side of the loop with Teflon - nice touch. Let's spray a material
that
is virtually transparent to RF on one side of some wire - yeah,
now there is the secret.

I honestly can't believe how some people are so full of bullshit here - you
know,
this my new saying -> maybe your bullshit flys with your local crowd,
but don't bring that shit on here and expect everyone to be as stupid
as you.

Bob.

The fuse voltage is not that critical, auto parts store will have what you need. dont worry about the voltage, current is current.

I'm helping a friend market some equipment and parts from a 'silent key' friend.

He does not frequent this ng. He resides in area code 310.

Initial enquiries directly to me.

Tri-Ex H-471 (I think) 71', 4 section crank-up tower with fairly new stainless hoist cable and guy wires, 500 lbs, you move. Located 2 miles due north of LAX control tower, $250

Large (70 lb) prop pitch assembly plus two spare electric motors. Unused by hams, $350

Standard (30 lb) prop pitch assembly, modified, $150

Eimac 4CX100000D (yes, that is the correct number of 000's) with socket, mounted in pro made sub chassis and filament transformer (10V @ 295A) plus radiator and plumbing $3000

This tube was used in a piece of test equipment as a series regulator, mostly for it's voltage handling capability and dissipation characteristics! The plate circuit was connected with #22 wire that really looked out of place.

The half linear:

There is a large linear that was under construction. It is just sort of started. Socket mounted, air system complete, nothing much wired.

The valuable parts are as follows:

A 4CX10000D (used)
An Eimac SK-300 socket, in good condition.
An SK-1306 chimney.

A Johnson 200-205 ribbon coil -- 15uH looks fairly new.
There are two new Groth turn count dials on the front panel but, the knobs for these dials which I think I saw laying around a couple of months ago, are no longer in sight and may or may not turn up.

A filament transformer marked 7.5V @ 100A. An older 8" or so cube shaped transformer (UTC, I think) with some diode strings on top that I suspect are for the screen. There is also a string of six 200V 50W zeners with heatsinks mounted to the side of the cabinet.

A choke for the screen supply and two more small transformers that may be for control or grid bias.

The air system has a Plexiglas plenum and an apparently new dual squirrel cage fan. The fan is just hooked up with test leads. There is a commercial manometer with it's tube attached to the plenum but the manometer itself is not mounted to anything.

The cabinet is a grey 24" panel size rack type. There is a panel for the front of the amp and a latch released door for the back. There are no panels in the front below the shelf where the tube socket is mounted. The cabinet is 44" high by 27" wide by 24" deep overall. It has a few scratches and blemishes as it has been rolling on casters around in the garage for years. It probably weighs about 150 lbs. with the above described parts.

There is no part of a plate supply evident...

$995

The operating linear

Dick, the silent key, acquired a commercial AM transmitter and using this as a base, rebuilt his own daily use amplifier in this cabinet. It is currently configured with a pair of 450TH's (plus 2 spares) in grounded grid. He used to drive it with a Heathkit SB-220. It runs about 4Kw SSB. He ran this amp for years, so at least it is reliable.

The nicest part is that it has:

Good coils switched by a very nice homebrew bandswitch.
Vacuum variables (300pf @ 10KV and 1000pf @ 3KV) I am unsure of the voltage ratings as they may be higher.

Real input tuning and an original commercial meter bridge with 7 meters across the top.

The power supply components.

A 240V variac (1 foot in diameter) rated perhaps at 50A.

The transformer is some kind of fairly modern monster. AFAIK it was made for a shaker table amplifier with a pair of 4CX5000's. The U-I laminations (which are most of the thing) on the plate transformer measure overall 18" x 11 x 6. I would estimate that it weighs at least 300 lbs. It is likely at least 10KW CCS rated. It is open frame with some eyes at the corners for the crane to hook up to:-)

The diode bridge is comprised of a zillion low voltage diodes in a fairly cute Plexiglas housing.

There is an 8H, 1A choke made by (for) Collins.

A whole bunch of 1uF 5KV caps (12) wired in parallel plus six 54uF, 2500V continuous DC rated (they are actually laser caps) wired in series paralell (36uF / 7.5KV effective). Note: One modern capacitor would be physically smaller than one of the laser caps and be rated higher than all these put together!

There are some odds and ends like a giant power contactor, main circuit breaker, and of course the rest of the stuff to make the 450TH's sing.

The bad part is that the cabinet is about 7' high, 3' wide, 2.5' deep and the whole thing likely weighs at least 700 lbs.

$995 You move it.

Everything else plus shipping.

Phil / UK

Unfortunately, there are many ways to perform this "mod", there are no
"standards". I have no idea how your tech wired these switches.

I do know that channel 14 is usually the high channel point of one
stage, and that channel 15 is the bottom of the low end.

Your best bet would be to get ahold of a frequency counter and go
through the channels, and try all the switch combinations, and make a
new chart.

You might want to try adding a better antenna, like a mobile mag mount or
topside antenna. You have to make sure that your radio has an external antenna
slot though. Without it, you stuck with listening i guess. You could get

youself a mobile antenna from you local Radio Shack for about $20 bucks. You have to see what's right for you though. Do you live in an appartment, or house? If an appartment, try attaching a window mount antenna to your child safty guards, or if you luve in a house. try a whip or mag mount on a pizza pie plate in the attic, and run some wire down. Hope I didn't confuse you too much.

I've seen these really cheap looking GE cb handhelds lately all over the place. mostly $20 to $30 bucks. Has anyone tries these GEs? I don't know the model number, but they are big, take 8 AA cells, and only a squelch, Volume, and channel up-down button. A lot of holes in the front with a channel readout.
Thanks

Guess it is impossible to do single band DXCC.

Your right. All the ham operators that have tried it and accomplished it on
10 meters for single DXCC are liars, as well.

What a joke.

No, you found a way out.

I can vouch for it. During the last sunspot cycle, I operated almost entirely from the mobile, and the highest power output I could muster was about 500 watts (A Pal 350MDX amplifier).

I contacted every country in Europe, three of the USSR Republiks, South America is very common, had a Sked with two gentlemen in New Zealand (they loved the name Shane for some reason???) and Australia was common.

Like I said, it would be impossible to get DXCC on 10 meters, huh?

>
>   In fact, even if he were to have QSL cards, we have absolutely no way

Your word against his.

From what I have seen, I would take his word. Most all you say is smoke signals anyway.

Have a nice day. You don't have to worry about me checking you again. I found better things to do with my time than make sure you aren't being an idiot anylonger.

Unless you are WAY out in left field, I will not post to you again.

Who is waving guns around? Looks like Johnny has that covered for the whole group.

Yes, moving is a way of life. Certainly not going to keep me down. So is this 10 year debate of "outlaws" still continuing? I see it is. What a bore. Though, I have to hand it to you. You keep your posts short, sweet and to the point. Perhaps you should be a mentor for Johnny.

Hank
(naw, still pumping the Prozac)

There has been a petition filed with the FCC by Alan Dixon to remove
the 155 mile DX limit.

The petition was filed on October 30 and it can be viewed at...

http://home.att.net/~uscb_association

Jim

might
> exaggerate the signal at the bottom side but hold it back on the upper.
----------------------------------------------------------------------------
------------------------------
I agree algain MC, even better don't worry about the actual volts just worry
about the actual number  which ever reads higher obviously gives a better
signal. To give a better idea you can use the volt meter in conjunction with
the watt  meter. Say you start with 5 watts and produce a 20 on the ac
meter, Drop the power in half take a reading lets assume it is a 10 you can
now say that 10 points are 3 db the meter readings may not be linear but you
can figure it out from there with a little common sense

Dwight you are a fool I have many friends who freeband with rci 2950's and Wilson 1000 in there trucks no amplifiers, from the east coast   they have more contacts to belieze,all of south africa, all the europeans countrys, brazil, australia, new zealand and the list goes on. Many more than alot of hams I know. Why because they love it and sit there and put the time in when they know conditions are favorable to a certain area.

Dwight Stewart <stewart@amouse.net> wrote in message >

Dwight, You are certainly one of the biggest jackasses to pass this way in a
long time. First you say you want proof then you say I was only kidding and
don't want the proof anyhow since you can't comprehend the fact that it can
be done. Then you say well ev3en if they were true. Son, you are a major
asshole and I personally will not reply to your post  you are in the kill
file
Dwight Stewart <stewart@amouse.net> wrote in message >

For what band,CB? I built 1 of the TDOA units you see advertised for

$18 or so,think it was the "handi finder".These work great for AM signals.If your interrested in higher freqs I built the Doppler with the digital filter featured in QST earlier this year and its the best I have seen.A kit is available from Ramsey.

Attenuater kits are now only $35 from arrow antenna or you could build an active attenuater for more attenuation.

Phil, I am sure it may have been a form of harmonics, but the point also being is they changed the frequency when propagation changed and the woodpecker was pulse width modulated, dirty signal designed to splatter, You couldnt do this with a am signal. So again My point remains you do not "especially Cbers" create there own conditions. Yes more power will get you further than someone withless power. I don't give a flying horsefarm you don't/can't just key up the radio and talk where ever you want whenever you want. Even if you are a SuperStar on the Bowl.
Mother Nature will not allow it. People get all juiced up when the sunspot cycle comes to a head and we hear the guys 30 over/S9 all day long How about when the Solar flux is at a low Do they key up and make there own conditions then. Phil Always a pleasure. Listen for me on the Bowl

I have a CAM 88 that did excatly the same thing after it exploded a capacitor, would key only for a second then start to chatter or not even try. I was a 200 MFD 16 volt cap and located on the terminal strip that is on the right side of the power transformer when the radio is

upsidedown and the face towards you. The closest value radio shack had
was 220 uF at 35 volts which is still within the 20% tolerance alowed
for most caps. It still works great and its been a couple of years now.
If that doesn't fix it than it could some other part in the keying
circut.

Bill,
     I'm having a problem with it. Thats why I'm in the market for a new one. When its on low the SWR shoots up to 3.5 to 1. On high its fine, 1.2 to 1. I thought it was the antenna system so I went out and bought a Wilson 1000. I still got the same high SWR readings in the low setting. Without the amp in line the SWR is flat. It doesn't put out much power anymore either. 60 watts low and 105 high and no swing with the meter on the peak power reading setting.

> Up until THIS Year they used to allow "anything" in if it was a 10M
radio,
> as long as it didn't have 11 in it.

That is not true at all.

Uniden had to run the non-modifiable CPU in the HR-2600 because of the FCC.

Their have been other radios (very short lived) that also had to either be
made nearly unmodifiable, or pulled from the shelves.

But I have seen the FCC citation given to
> the Truckstop in Maryland 2 weeks ago.

If the rigs where converted, I would see why.

If they where not converted, then the FCC just stepped over a VERY deep line of free trade and that WOULD be grounds for a law-suit.

Every radio produced that had capabilities from the factory would be a problem. Kenwood, Icom, Yeasu.

Galaxies might have more of a problem (same as the knock-offs) since they have a 40 channel selector and a non-functioning bandswitch, but they are still legal radios in as much as my Kenwood TS-440SAT is just as easy (and their are others that are completely programmable from the faceplate) to modify for illegal frequencies.

 >The fcc now considers (they put this in writing) most 10M rigs as "designed >for primary operation as a CB", and as such they are taking the attitude that >they are non-type accepted CB equipent.

That could and will be fought in a court of law if the radios where non-modified. I would accept the challenge there, just on the grounds of singling out one brand (since Jimmy P. is the sole maker (nearly) of the equipment, and they went out after his companies last year and lost), attempting to bring down a legal business, etc.

The FCC does not have gratis rights to bring down a company if they are working within the confines of the laws and regulations put forth.

Nowhere did they change the rules and regulations, so nowhere can the FCC start enforcing things that don't exist..... At least not if people stop them.

> The truckstop was cited for NON-Modifyed 10M Galaxy radios.

I would love to be the lawyer in defense of a mom and pop shop in this one.

Jimmy P will also love this one. Or at least, his lawyers will!

 They(FCC) also
> mentioned in the citation specifically that they tested the RCI 29XX
series &
> Galaxy 10M radios in their lab & found them to be "designed for & easily
> convertable to" CB radios.

Which has been a well known fact for a few years.

 They seem to be using the premise that the rules
> state "Equipment designed for" Citezen's Band use must be type accepted as
a CB
> Radio & they are now interpreting that to include most current 10M rigs.

I can just as easily modify a Kenwood, though.

That is where you have to draw the line. Just because something is more affordable, and in the hands of the public, as well as more accessible to the general public (because of price, in this case) doesn't mean that any faction of the US government can take them down.

Stay tuned to this one.... I bet it gets interesting. The FCC could stand to lose on this... Being the bully in town will only carry you so far.

  In a
> related incedent earlier this year, the FCC would not allow a shipment of
> Mirage RCI-2950's into the country, using this same logic.

Mirage radios come converted. Therefore they are subject to import restrictions.

  I think the Mirage
> people here are starting to use the name "VIRAGE" on some radios since
this
> incident so as not to "flag" anything looking for Mirage on the packing
> lists.......

Two totally different piles of shit. Neither one worth owning.

Sorry,

But we have been using wireless networking for a long time.

The future may be fiber for campus backbones, or on a switched network, but it is far from fiber in the house!

Too expensive
Too fragile.

The FCC has already authorized microwave research and development bands.

Their is several ISPs here in Houston that are offering 3 to 10 megabit
bi-directional internet connections via this method. Small antenna on your
house, fractional T-3 for a hundred bucks.

Only drawback...

You have to be line of site to the main transmitter.

Hold on here. You have the theory all wrong. When you spray the
teflon, (teflon is the words slickest substance) the RF slides off the
element easier. Therefore spray the forward half of the elements
for improved gain, and glue sandpaper strips on the back side
for improved front to back ratio.

The easiest way is to purchase a pair of identical beam
antennae. Most beam manufactorers will also carry a
stacking kit which will include the stacking bar and the
cophasing harness (wiring harness made from coax or
whatever) that they recommend for stacking their antennae.
I don't know if you've taken a look at the picture of my
stacked threes, but they can be seen at
http://www.zebra.net/~grndrgn/cbthirteen/news.html

  I have built a few 1/8 loop DF antennas. I can believe that
you do have a directional 1/8 loop with half of it teflon sprayed,
however......it is not because of the spray. Check it out yourself.
Remove the teflon, and check again, or flip flop the teflon
sprayed side. You will see no difference in directionality.

      The reason for the directionality in the first place is that the
loop is out of balance. Any 1/8 loop that is hooked to a piece
of coax will not be balanced and will show some directionality.

       This out of balance condition is not really desired. It will
not give you the extremely deep nulls that a balanced loop
will. The deep nulls of a balanced loop will give you the
most accurate results.

Chris wrote ...

My first antenna was a K40. Then I played around with a 5' Firestik II, Antron 1700, and a big ass double coil X-terminator. Not one was any better than my original K40. Now I'm thinking about getting a Wilson 1000 magmount and calling it quits. Is the 1000 worth buying? How does it compare to the K40 in regards to transmitting and receiving? Will it handle 26 to 28 mhz and still retain a low SWR? Thanks.

Yes to all the above. I ran a Wilson 1000 when I was active in CB and it was an excellent antenna. Worth the few extra bucks. I recommend getting a lip mount as opposed to the mag mount. Works even better.

Interesting to note that I have never heard an 11 meter AM signal while I was working CW in the Extra portions of the bands. I have been QRMd by a few who strayed too near the 10 meter CW/Data portion. But you are right ... generally, I could care less. My main purpose in monitoring the NG is to lend a hand where I can. Particularly where antennas are concerned. I've said it before ... If we put 3 dollars into our antenna for every 1 dollar we spent on our radios, well ... just try it and see how much better you get out. It's like the difference between a rat shack mag mount and a Wilson 1000. Not much of a contest, huh?

To Everyone!
I have just finished the Lubbock pages.  There are a lot of pictures of the
activities as well as the keydown.
This was a great function!!  This club did a great job!
Go check it out!
And I am even inviting the Wanna-Be-FCC-Cops to go see how much fun we can
have!!!
hehehe
Next year we can make it as big as Hot Springs.... huh???
It's worth it.

Hi Jack,
> Sorry, but 10c/ps (10 hz.) isn't an amateur band!
Well I kind of know that (G4ZOW) but, was it 'Big' a few posts ago
stated that it used to operate anywhere between 3 and 17MHz. I'm sure
you remember that even though it seemed strong on one part of the SW
spectrum you could still hear it in the background on whatever frequency
you were listening.

I'll go download all these sites for reading later.

Tnom, the purpose for the Teflon is to slightly attenuate one side of the antenna which eliminates multiple readings on the coated side of the antenna. Try it, it works. Spray one side of your loop antenna and rotate it. You'll see almost 3 db difference between the two sides.

Hello, i'm looking for a ts-5010 owners manual and stock mic. Would also be interested in a complete 5010 parts radio. Specifically top\bottom covers and front faceplate. I've been told parts are not available for the 5010 any longer so i'm hoping someone's got a dead one out there they would like to part with.

Thanks, Jeff

Geez Wildcat; come on now. You really think you can make an antenna
directional by spraying an insulator on an antenna? Teflon was first used an
insulator for radar in aircraft. Is that whats confusing you?
Maybe thats why mobile base antenna don't work, after all they have that
insulator at the base making the antenna directional right into the body of the
car. If you really believe this, hows that line go, Ive got a beautiful piece
of swampland in Florida that's just right for you.

I will go along with this. I ain't never seen one for 11m though...I
guess if you had a tower big enough you could stack two dipoles one atop
the other off to the side of the tower. I think you'd find that the
pattern is not omni directional but what's known as "offset". Offset
patterns can be very useful, indeed, as there is almost always a
direction that you have no interest in transmitting in.

What is this Antron? I thought that it was an end-fed dipole. If it really is, the addition of ground radials should not improve the performance of this stick as the radiation angle should be 0 degrees anyway. Seriously here. I agree that you want the lowest angle of radiation to talk the farthest. I think this is why those Super-Scanner antennas seem to have an edge for DX. Just my finding here.

This sounds like a mega hack job to me. In stock electrical trim the PLL in the radio can "tune" 128 channels - max. Having a six position switch and a three position toggle means you have 18 different bands of 40 channels - which is quite ridiculous.
You can bastardize the radio to expand the coverage further, but given the narrow tuning of the receiver and transmitter there is little point. Your best bet is to sit down with a frequency counter and go through each channel and make note of where you are. If you can find your popular local channel on the radio, which in your case could be quite a challenge, you should be able to locate someone locally who would loan you their frequency counter - or help you with your radio.

Good luck, it sounds like a gem!

This is no flame, just a thought. Perhaps you have set yourself up for this kind of treatment? After all, how did they find your house? If you do business as Joe Snodgrass Radio and you are the only Joe Snodgrass in town, and you have a listed phone and address in the book, you might just expect some of this at one in the morning from the insomniacs. CBers are a strange group. Maybe you are too nice? When the guy comes in and wants to make you an offer on one of your fine radios, look him in the eye, then at the price clearly posted and then explain that THIS IS the price. Cuts down on discussion. As for repair work--when the item is dropped off for repairs, extimate the best time you can get it out in, then add two days, and put it date on the customers receipt ticket. If you get it done sooner, he will be thrilled. If he complains that Bubba down the road said he could get it done in an hour, tell him that Bubba can have the job, but don't bring it back here when Bubba breaks it.

I don't know what the teflon spray does. In fact I ain't never seen teflon in spray can form. I would recommend using a radio that has a good RF gain control that will kill even the strongest signals. Drive north, if the signal goes down, it is south of you. Drive west, if it goes down it is east of you. Turn the RF gain down and narrow your search. You should be able to nail down anyone within about 15 to 20 minutes. You may also want to get a friend to transmit near you so that you can see what meter deflection his strong signal will give you with your RF gain throttled all the way back. That way when you go out transmitter hunting you'll have a better idea of how close you really are. This all takes a little practice, of course. When you find the person you are looking for make sure you are bigger and uglier than he is!

Well poss. playing with the xtal(s) and/or building
a new lil' oscillator board with T/R switching may
alleviate this "problem".

The so-called "lookalike" CB, the TRC485, seems to
have different innards - same skin, different guts -
at least from some parts sheets on the Tandy support
website that don't correspond to what I see in the
HTX10.

Putting on a CW mod shouldn't be too bad though -
I bought it for 10m and have no interest in freeband.
Neverthelesss, I like to know what the circuitry
could do.

Find a copy of the ARRL Amateur Radio Handbook. There should be information in it. There are schematics for making one from scratch, and you should be able to figure from there what you need to do. Most Field Strenght Meters are not expensive, and would be less bulky than a VOM, leads and whatever adaptation you build. The book should be available through the local library. Also, some past issues of 73 magazine, and Pop Com should have articles.

Back it up Wildcat, don't try and brush it off. You are the one that has an understanding problem. Very personal, you have no hay in the field. What kind of intellect would even come up with such a hair brained idea? Spraying an insulator on an antenna makes it directional? Maybe you need to patent your idiotic idea before Cushcraft, or Mosley beat you to it.

Hello everyone;

One of the members of this group has come up with a new and very radical idea how to improve our antennas. He says if we spray one side of the elements of our antennas with an insulator that we can make it directional. He suggested Teflon spray, That may be hard for some of us to come up with. Do you have a supplier for this spray Wildcat? Maybe one of those lacquer sprays would work? Or maybe a wax coating? There not quite as good an insulator as Teflon, would they work? Can't wait to find out how much this will improve my front to back ratio on my beam.

Oh really hahh i was on top of a big hill with my wilson 1000 on top
and my real deal box kicking it on the high side.  Im allways up on 26
in the afternoon when im heading to work and i hear all of those big
stations out of the south slam me in but my ears are allways plugged i
guess that toll free is gonna have to unplug them next time.

tripple 5 outta the north east corner in my motor car and i just got
down.

>will..........................

I am aware of all the points you made. This is not the firs test of this nature
I have performed, nor will it be the last. On Vans, cars, trucks, hoods,
bumpers, trunks, roofs, forward wattage, reflected, etc, etc.
Results don't vary much.
I was simply making a point to the 102 lovers and the newbies. I fugured folks
like you and a few others have already done these tests and then some, but
thank you for your input, I'm sure it will be very helto others who wish to
attemp tests of their own.

i had one of those rigs once, it was a pretty good rig, but the ears
had a lot to be disired.

<<No kidding.

I think he learned his lesson, though..

Judging by his lack of participation over the last couple days!

Toll Free>>

Uh huh.

So now this NG is your own little private club where
you can swagger around making childish threats, use
profanity, boast about how loud your CB signals are,
flaunt the law, and drive off anyone you don't
like.

(Have you been watching too many prison movies?)

Toll, ive got about 30 different countries on there way from him. he obviously doesnt know anything about the hf bands or propagation. i guess they dont talk about that on the repeaters. he'll be eating shit when he sees the cards all with the correct contact info and everything else thats in the mail. he is so ignorant. he cant understand that 10 is the best ham band during the high cycle like were in now and 11 has even better dx than 10. he should follow the link to the dx info on my signature and see all the current 11 meter dxpeditions going on. he'll be suprised. this guy is a real one in a million saying so much stupid shit like he does. any real ham would be a shamed.

Yes, the "Right of Free Speech allows this making childish threats, use of
> profanity, boast about how loud your CB signals are,  flaunt the law" sort
of like Johnny Boy coming on hear threatening to send his letter to the FCC
trying to take down the whole 11 meter band by himself. Ill bet he felt like
the big man on Cell block 5 after he wrote his short story to the feds. now
he probably feels like PeeWee Herman all whacked out!

so can I just use one of my teflon coated frying pans? does the teflon keep the signal from sticking to the antenna on that side kinda like my eggs?

Wildcat wrote:

> > Anyone have plans or tips for building or buying direction finding
> > equipment?
>
> Just build yourself a 1/8 wave directional loop antenna (in the shape of a lollipop) and spray one side (1/2) with Teflon spray. Then just follow your S-meter for peaks. When you get close to the area, start reducing your RF gain. When you get in the neighborhood of the subject, disconnect your antenna from the back of the radio and raise the RF gain to the max. As you get closer, reduce the RF gain to zero. Once you get peaks with the antenna disconnected and the RF gain at zero, you should be within a few houses of the party you are trying to track, which all you have to do is start looking for antennas on roofs.
>
> If you really want to get technical, you can build a couple of "Active" antennas which use triangulation to determine the location of an emanating radiowave. (This is the method the FCC uses along with aerial photography)

Interested in getting you Browning fixed?

I've been working on Brownings since 1962 in the Chicago area. Had a shop on 63rd and Rockwell but had to close because areas changed to high crime. Working out of my basement by appointment only.

The term is "High Drive". It's an amp that requires more than 4 watts to run it.

You're missing the point, Scott. We're not talking about the occasional lucky overseas contact. He claims to have worked 112 countries, which is absolutely impossible. There are not 112 countries within range of any CB radio in this country, no matter how much power is used.

There are only about 260 countries in the entire world, and he claims to have made contacts with nearly half of them. As I said before, absolute nonsense.

You say you have "talked overseas." Have you heard 112 countries on your CB radio, even on the freeband frequencies?

So, if his claim of working 112 countries is suspect, than everything else he says also has to be suspect (including the QSL cards he claims to have).

And how many of your friends have made contacts in 112 countries? We're not talking about the occasional lucky overseas contact. He is claiming to have made contact with 112 countries.

And he claimed to have made those 112 contacts during one sunspot cycle using nothing more than a 25 watt radio and an Antron 99 (that is exactly what he claimed in his message - look it up).

And, if your look at my response, I told him there "is no way you have contacted that many countries with the equipment you describe." And I stand by that statement. He has not contacted 112 countries using nothing more than a 25 watt radio and an Antron 99.

For that matter, I do not believe that he has ever contacted 112 countries using any radio in the freeband frequencies. There are only about 260 countries in the entire world. He is claiming to have talked to near half of those countries. Again, absolute nonsense.

So, if he lying about contacting 112 countries, you simply cannot trust anything he says. If that is true, then why should I believe him about the QSL cards? If he were to send my any card, why should I believe that he got them the way he claims?

This doesn't make a whole lot of sense. If Galaxy didn't get a cease and desist order, why are FCC agents telling shop owners to remove their radios? Have any shops tried challenging these citations? Most radios are capable of being operated illegally, so I find it hard to believe that the FCC could single out a few models to go after without getting themselves involved in some sort of selective prosecution challenge from the manufacturers. It's pretty easy to get a Kenwood-Yaesu-Icom to operate on CB frequencies, so why couldn't they also be considered non-type-accepted radios. This just sounds like government harassment. I hope the truckstop on MD tells them what they can do with their citation.

>
> I contacted every country in Europe, three of the USSR Republiks, South America is very common, had a Sked with two gentlemen in New Zealand (they loved the name Shane for some reason???) and Australia was common.

Oh, he's much better at it than you, Toll. He claimed to have made those 112 contacts during one sunspot cycle using nothing more than a 25 watt radio and an Antron 99 (that is exactly what he claimed in his message - look it up).

And, if your look at my response, I told him there "is no way you have contacted that many countries with the equipment you describe." And I stand by that statement. He has not contacted 112 countries using nothing more than a 25 watt radio and an Antron 99.

Now, read that again, Toll. He didn't just say he contacted 112 countries. He said he contact 112 countries using nothing more than a 25 watt radio and an Antron 99.

And I didn't say that he had not contacted that many countries. I said that he had not contacted that many countries using the equipment he described.

However, having said that, I will _NOW_ say that he has not contacted that many countries using any radio in the freeband frequencies. There are only about 260 countries in the entire world, Toll. He is claiming to have talked to near half of those countries. Again, I say that is absolute nonsense.

So, if he lying about contacting 112 countries, you simply cannot trust anything he says. If he will lie about one thing, he will lie about anything.

And now here you are claiming that you have contacted every country in Europe. Right, Toll. Sure you did.

> Have a nice day. You don't have to worry about me checking you again. I found better things to do with my time than make sure you aren't being an idiot anylonger.
>
> Unless you are WAY out in left field, I will not post to you again.

Oh, please make that a promise. I won't miss you, Toll. I've spent way too much time talking to you guys anyway.

The fire up 99 is a replacement tip for the antron 99. Is that what you need?

I have customers that have purchased it and they say it works well. No complaints.

Yes, of course, and as each Dayton comes around each May I've never got enough money together to make the trip worthwhile even though I fly your way many times. Probably visited more states than many on this ng:-)
> hey is that one of the reasons we fought
>you guys , so we could have unlimited rf potential,
No, that was to chat up our girls.
> ,......icm
>out...........ps. are you a engineer?
No, it's been many years since I was an engineer, and then I only repaired juke boxes and video games. I soon learned I would never be in charge of Sony Corp' and so I left and moved into marketing.

I currently play around with PMR/LMR equipment and am working on a low power AM broadcast transmitter project to market to our budding broadcasters. We have a low power licence here in the UK.

I have a fairly large web site sitting on server space where I was intending to market a wide range of good radio equipment but that is on hold as I decide if it's worth trying to sell to radio enthusiasts. My better nature tells me it's no longer worth it. It's impossible to compete on price with many imported items as our cost is greater than those in your country due to freight, excise duty and import taxes and then a minimum of 50% mark-up which is only good business practice in my humble opinion.

Go look

Actually, its the Solarcon A-99. It used to be sold by a company called Antron (the model number was 99 - hince the Antron 99). However, the company split up several years ago, with one owner keeping the name "Antron" and another owner keeping the rights to that antenna.

The second owner started a new company, called "Solarcon," and renamed the antenna the "A-99." However, since many older operators still know the antenna as the "Antron 99," the name still sticks to this day.

It is described by the company as a "half wave over a quarter wave variable mutual transductance tuned antenna." It is normally sold in a "big-stick" style arrangement, but has optional ground plane radials that can be added for an additional cost (the GPK-1 ground plane kit).

It is very popular in the CB band, especially with freebanders. It can handle higher power levels and has a very wide bandwidth.

Saying that a material has dielectric capabilities means that the material is a better electrical insulator than a conductor. It does not mean the material will attenuate RF. Plastic has dielectric capabilities but, unless it is really thick, it will not attenuate RF in any way.

Spraying Teflon� on an antenna should have no affect its RF properties.

Why would you spray Teflon� on one side of this antenna? Teflon� has
no ability to affect the RF properties of the antenna. Teflon� is like
a plastic coating, it may not conduct much electricity, but it has
little effect on RF.

> you don't have to do that, just leave off the spray, and it might work.

Actually, he could just leave the spray on. It should not affect the
antenna in any way.

However, we should straighten out his description of how to use a loop antenna for RDF work. When the widest part of the loop is facing the signal, the meter reading will be higher. When the ends (sides, whatever) of the loop are facing the signal, the reading will be lower.

The disadvantage of this type of antenna is that it is easy to confuse where the signal is coming from - the signal could be coming from the front or back of the antenna and the reading would still be the same. You could use your body to attenuate the signal, but I doubt that would be enough to show up on most radio meters.

This explains why there are many different RDF antenna designs. Each has advantages and disadvantages.

This has been tried at least four times that I know of. The first time was less than six months after the rule was added. In each case, the FCC has said no.

And they have a long list of reasons to support that decision - no compelling reason to change rule, not in the public interest, not compatible with the intended purpose of CB, other radio services for that purpose, and many others.

Given the current negative attitude many people have towards CB'ers today, the FCC is not likely to change its mind at this time. In other words, this petition is a waste of time.

The 55 is as close to a 1/4 wave as you will get in a ride around antenna
anything longer would be a 1/4 wave stick, they are a long antenna and
perform as such.

Dwight what is wrong with 25 watts on SSB when the solar flux is high? like i said many mobiles have done this with a stock Ranger 2950, Wilson Mag mount and the freeband. I don't think he has any reason to lie to us, or BS us, he has even offered proof which you now don't want to accept. Columbus did'nt believe the earth was flat so he went out on his own and found out the real deal.

sorry for confusing the NO CODE TECH MR Dwight. the proper term should have
been 112 DXCC enteties not countries. if he only knew theres over 320 dxcc's
all counted as different countries. he's got his proof on the way in the mail.

Dwight you are missing the point the 10/11 meter band is a world wide band
when propagation allows it. People work the world with qrp stations, do you
know what a qrp station is Dwight? now i know you havent much experiance on
HF since your license does not allow it but There is nothing lucky about
talking overseas it doesnt come down to luck . Get real hit the books before
you come out here making a complete ass out of yourself with your foolish
statements

>watt radio and an Antron 99 (that is exactly what he claimed in his
>message - look it up).

its true. there are hams that have done it in one cycle on 10 with 5 watts and a dipole.

> And, if your look at my response, I told him there "is no way you have
>contacted that many countries with the equipment you describe."

how can you tell me what ive done?

>I
>stand by that statement. He has not contacted 112 countries using
>nothing more than a 25 watt radio and an Antron 99.

you cant stand by a statement you know nothing about.

> Now, read that again, Toll. He didn't just say he contacted 112
>countries. He said he contact 112 countries using nothing more than a
>25 watt radio and an Antron 99.

25 watts is more than enough power.

> And I didn't say that he had not contacted that many countries. I
>said that he had not contacted that many countries using the equipment
>he described.

now your back peddling. first i never did it at all now i just didnt do it with 25 watts? you are a ass. keep your opinions straight here.

> However, having said that, I will _NOW_ say that he has not contacted
>that many countries using any radio in the freeband frequencies. There
>are only about 260 countries in the entire world, Toll.

once again you know nothing about what you say. i apoligize because the correct term was DXCC enteties and not countries but for all radio purposes its the same thing. i suggest you go here Dwight and take a look at all the different dxcc's in the world. http://www.alfatango.org/at_pref.html you may be suprised.

> So, if he lying about contacting 112 countries, you simply cannot
>trust anything he says. If he will lie about one thing, he will lie
>about anything.

i'm not lying.

> And now here you are claiming that you have contacted every country in
>Europe. Right, Toll. Sure you did.

why didnt he? its very possible to do in one weekend if your dilligent and not a ass hole that nobody wants to talk too.

> Oh, please make that a promise. I won't miss you, Toll. I've spent
>way too much time talking to you guys anyway.

youve made a huge fool out of yourself.

Phil, If you "kinda" know that then you will see that was the one who also
posted the 10 hz frequency as well. I know its early for you but rub the
sleepies out of you eyes and read on.
Again Phil it is a wide signal Ever heard of Nicolia Tesla

such an ass. he'll see. i sent the photo copies of the cards. front and back
with all the valid info all hand written most are flag cards of the countries
but others are post cards. if he say i got them off the net thats strange
because all the ones i sent him were contacts from 94 and 95 when hardly

anybody(especially me) didnt have the net.
PS nobody qsl's over the net. just once in a while a newbie on here will try
and usually gets flamed lol

This is from my post Phil you have to read all of it not just selected
sentences.Notice the word primary .The signal was alos varied according to
which band was open "propagation wise"

"The Russian signals are primarily pulsed at the very
dangerous 10 Hertz Extreme Low Frequency (ELF). It has remained on the air
more or less continuously ever since. Varying up and down through the
frequencies between 3.26 and 17.54 megahertz, it is pulse-modulated at a
rate of several times a second, so it sounds like a buzz saw or woodpecker."

>"Uniden had to run the non-modifiable CPU in the HR-2600 because of the FCC."

The HR-2600 was very short-lived & Uniden brought back & continued to sell
the 2510 untill it was discontinued a few years ago..

>"Every radio produced that had capabilities from the factory would be a
>problem. Kenwood, Icom, Yeasu"...

I agree. The ARRL should fight this because "next year" this same FCC logic
could target thesde radios too..

>" using the premise that the rules
>> state "Equipment designed for" Citezen's Band use must be type accepted asa
CB Radio & they are now interpreting that to include most current 10M rigs.

>"I can just as easily modify a Kenwood, though".......
> True, but   A case can be made though that your Kenwood is not "Primarily

designed" for CB operation, (no 40ch dial, roger beep, mike & power connectors that match Cobra, not sold thru truckstops & CB shops ect..)

> "Mirage radios come converted. Therefore they are subject to import
>restrictions....."

Mirage RCI-2950's DO NOT come converted, they are 10M only & exactly the same radio as the RCI-2950's except for the name on the outside of the box (and the picture of the big "18 wheeler" on the box!!)
> If the FCC really continues this policy, they will most likley "clarify" their CB regs in regard to this "primarily designd for CB use" stuff to go along w/their policy IE.. "no radio designed to operate solely between 24 & 30 Mhz shall have 40 "channels or memories, or any multiple thereof...., All Band & other controls must be fully functional when imported"....ect

Boy, I must conceed the discussion to the RF engineers on this NG. Espectially you Mr. Lowtower, or perhaps your real name should be inserted here. Aparently you guys know much more that both the Diamond and Larson Antenna Companies, which presently use Teflon to minimize RF splatter on several of the ground elements on some of their antennas. I must say I am impressed. All of this wasted talent is being spent on CB.

Perhaps you guys should send your resume's over to them because Im sure they'll want your genius on their staff as soon as possible.

PS: I almost forgot! You guys should also let computer board manufacturers know about your discovery so they'll stop wasting their time spraying all those components as they come off the production line. They'll be very unhappy to know that their attempts to reduce all of that stray RF running around in a CPU cabinet has been in vain.

In the 70's, I could count on the fingers of my hands, the number of
"agitators" there were. And it was different then. An agitator back then
was usually a "mr. Hyde" alter ego of another "normal" operator, that
was just tweeking someone that displayed the verbal equivilent of a
"kick me" sign. Today, the jerks are just jerks, they don't really
"talk" to anyone, they just want to impress everyone with their 4 letter
vocabulary and elementary school education.

> and using Fender guitar amplifier reverbs as echo boxes 30 years ago where I live.

Ah! We had guys that used reel to reel tape delays and reverbs for echo effects too. The difference is that it took some "engineering" to make it work. You couldn't just plunk down $40 bucks at your local truck stop, and buy them. These guys pumped up the echo for pure entertainment and fun(and just to prove that they could do it), and it only lasted for a hour or so. It wasn't a constant thing.

> These instances are nothing new to CB radio and have actually dissapated in my area of New England. Mr. Kasupskis problem is that he just got his Ham license after 25 years of CBing which makes him believe that he has been knighted a radio-cop..............How fast they forget. If CB pissed him off so much, why didnt he get his Amateur license 20 years ago and more importantly, why is he still wasting his time on CB? When I got PO'ed at CB 24 years ago, thats exactly what I did only to find a different kind of nit-wit on the Amateur bands.

Again, from my area's perspective, the A*-hole factor was less 20 years ago, and could actually be entertaining to listen to on occasion. Now, there is no creativity, just vulgarity, and there's more of it, or at least it seems it as the amount of "normal" people diminishes.

> His problem is that he thinks his new license has made him "born again".

It's easy to assume that. But if he didn't have that ham license, what would that make him?

>
> >THOSE are the ones that are
> > ruining CB.
>
> No-one is ruining what is already ruined..................You'd have to go back to 1958 to find CB purity.

A sad but true statement. But I'd settle for the "good clean fun" of the 70's.

Teflon Spray? Pray tell, what will this do?

> Then just follow your S-meter for peaks.

The loop antenna tunes for nulls not peaks. The null is much sharper than the peak (Which is parallel to the loop).

Another trick is to place a magnet mount antenna on the center rear-most point of the vehicle. Spin the car in a circle, and peak the signal. Then drive in that direction.

> When you get close to the area, start reducing your RF gain. When you get in the neighborhood of the subject, disconnect your antenna from the back of the radio and raise the RF gain to the max. As you get closer, reduce the RF gain to zero. Once you get peaks with the antenna disconnected and the RF gain at zero, you should be within a few houses of the party you are trying to track, which all you have to do is start looking for antennas on roofs.

This will usually work fine for close in. Having a handheld radio with a good "S" meter also helps to narrow down places like row houses, and apartments, where the antenna may not be visible.

>
> If you really want to get technical, you can build a couple of "Active" antennas which use triangulation to determine the location of an emanating radiowave. (This is the method the FCC uses along with aerial photography)

A "Doppler" direction finder is the best solution. It requires 4, 1/4 wave antennas placed in a square pattern. The electronics switch signal phasing between the 4 antennas, and determine the direction (Usually on a 360 degree set of LED's). These are available commercially for around $600, and a place called Dick Smith electronics used to sell a $99 kit.

BZZZTT! Wrong answer. The "flat" side of the loop is the "null". You
point the pointer for the lowest signal, as the null is much sharper
than the peak is.

>
> The disadvantage of this type of antenna is that it is easy to confuse
> where the signal is coming from - the signal could be coming from the
> front or back of the antenna and the reading would still be the same.
> You could use your body to attenuate the signal, but I doubt that would
> be enough to show up on most radio meters.

A loop is bi-directional. You have to use a loop in conjuction with
another method to resolve which side of the loop is the "correct" one.

We sometimes used a mag-mount mobile antenna, mounted on the rearmost
center part of the car. Spin the car around and peak the signal. Then
drive in that direction, and use the loop to fine tune your heading.
This type of Df'ing is best done with another person to operate the
switchboxes, and draw the lines on the map.

We used to track signals with our base station's first by triangulating
with 3 different station's beam headings. Then we would go in the
direction of our beams, in the mobile, that way we knew that the loop
null signal in front of us was the right one. It never took us more that
a 1/2 hour to find any base station jammer. A smart mobile jammer was
much more difficult.

Wildcat,

I like how when someone points out your full of shit, you assume they are a HAM - I guess you aren't used to people actually knowing something about radio. Secondly, get over this thing against HAMs - why not get pissed at the Girl Scounts. Least you would probably know more about RF than they would. "Listen here sweetheart, I don't think those fudge cookies you sold me made a very good antenna, but damn, they sure tasted good"

Bob.

I have recently ran across a couple of huge tubes, they are ML-5531 THE MACHLETT LABORATORIES. I am trying to find the specs on this tube but apparently the company in no longer in service. If you have any info on this tube and can help me I would very much appreciate it.

thanks,
KRS

Please don't.. The VFO Slides Transmit and Receive Stock. The Lincoln does not have a clarifier. You are probably talking about the R.I.T control. This is Receive incremental tuning. This is used to touch people up on SSB.

This is only for RX. You need to set this in the center. Then tune people in with the VFO on the last Span setting. Then if need be touch them up with the RIT...

>Plastic has dielectric
> capabilities but, unless it is really thick, it will not attenuate RF in
> any way.

TEFLON (Polytertrafluroethylene) has Aluminum atoms as a substruct (PSSSSST....dont tell Mr. Lowtower). It is the Aluminum that gives TEFLON its heat dissipation capabilities. Aluminum, along with Soy polymers account for about 80% of TEFLON'S mass. TEFLON is identical to Polyethylene however, the only difference between them is that instead of hydrogen atoms (in Polyethylene) there are fluorine atoms (the result of which is TEFLON). Most computer board manufacturers coat their products with TEFLON in an attempt to insulate any electrical discharge and stray RF that may take place while contained in a CPU cabinet. In addition TEFLON makes for excellent Baluns. Every wiring harness and bus panel in the Space Shuttle is generously coated with TEFLON as well.

When exposed to the elements over a long period of time, TEFLON will oxidize and "pit" similar to a solid Aluminum wheel on an automobile.

That's correct.

If you have the resolution on the VFO, then leave it.

If you tie the transmit to the receive on the clarifier, then when talking to another station you can 'walk' each other up or down the band.

The BEST solution is the transmitter being tuned by the VFO. If that isn't fine enough, then a second control with as a 'fine tune'. With a SEPARATE receive only control.

The reason the clarifier is so commonly 'unlocked' on CBs, is that the channel control generally give you 10Kz resolution. If you had better resolution on the main tuning, then you wouldn't need the clarifier to change things as well.

Hmm, I wonder why no one thought to put 'dual controls' on some CBs? I don't think it would actually be that good an idea, but hey, it would be the mod people would want, and pay for, right?

Oh boy, another clarifier thread. I recommend that a qualified technician modify your rit to work on transmit. It's very easy and has always been beneficial to me. The stock vfo will only tune in 100 Hz increments. These guys who tell you not to do it don't know about ssb evidently. I work primarily on ssb and 100 Hz just does not cut it. Plus it makes it hard talking in a round table if somebody can't tune to the others.

I recommend changing only the 8v source and not changing any components or any of the circuit. Of course you will have cut one diode to remove the tx only voltage source. Touch up the pll so it will be on frequency with the rit knob centered. On my HR 2600 I can turn the rit off. That should satisfy the purists. For ssb operation, I have not found a better mobile radio than this line. The only way to do better is with an amateur radio. JMHO. Have fun.

Again a cop out, anyone that wants go back
to the original post and look at what you typed,
they can. I'll tell you what I will do, I'll
post it headers and all, see if you can worm
out of "I never said this" shit.

"John D. Kasupski, KC2FNG, KNY2VS" wrote:

> At this point, I'm going on record as supporting the measure currently before Congress that would empower local law enforcement agencies to enforce FCC regulations with respect to illegal power and out-of-band operation.

In some areas, local police are already taking action in this area. They are using the premise that the "illegal" operator is depriving the neighboring homeowner (the complaintant) of the peaceful enjoyment of his/her home. Many states already have laws on the books supporting this premise, so it is fairly easy to charge the "illegal" operators under one of these statutes.

This also applies to the "illegal" operator depriving the radio operator of another radio service (the complaintant) of what is legally his/hers (the radio frequency). Again statutes exist in most states that support this premise.

Note that both of these are not based on the actual radio itself, but on the results of the use of that radio (hince avoid FCC entanglements). Let me give an example that might explain this idea better.

If a drunken pilot, operating his aircraft in a dangerious manner, were to crash his aircraft into a town, the local police would not have to go through the FAA to charge the pilot with violating a whole range of local statutes. In other words, they are not going to charge the pilot with violating FAA rules - they are going to charge him with operating a vehicle in an unsafe manner, reckless endangerment, etc.

Why should this idea not also apply to the "illegal" radio operator? They are not charging the operator with violating FCC rules. They are charging the operator with violating local statutes which apply to all who live in that community.

The measure currently before Congress would make the process a lot easier (less stretching to make local statutes fit the problem), but is not absolutely necessary to police local "illegal" operators.

What does not exist in most police departments is the expertise to hunt these "illegal" operators down. However, some states are waking up to the idea of using outside individuals, such as Amateur radio operators with RDF skills. Others are turning to outside agencies with RDF capabilities, such as the Coast Guard, Coast Guard Auxiliary, Civil Air Patrol, certain military radio facilities, and others.

Actually... I just noticed you said 'opened' and not 'unlocked'

If you in fact mean 'opened up' to extend how far it will drag, commonly refered to making it a slider, I would advise against it, especially for mobile use. You can do it, but some rigs become so touchy as to be useless. All that involves is (on most rigs) taking out the elements that 'limit' how far the voltage from the pot can swing. This is usually a resistor or two and a diode.

If you insist, then consider replacing the pot with a multi-turn unit.

Make the decision on what YOU want to do though, not on what other experts tell you must be done. Especially when they say it's the only way to go. Most things you do to mod the radio are tradeoffs, some not so obvious. Even a fixed transmit with receive clarifier has advantages, just not too obvious.

Too many people want a 'slider' just because of hearing other people talk about it, when in reality it's a PITA. The original range of the clarifier is usually enough MORE than 99% of the time. And if not, well, you could always have someone fabricate a 'pull up/pull down' on the voltage feed with a switch to act as an extension of the clarifier range.

Too many people don't know what the hell they are doing though with a clarifier and end up with what they think is great, but sounds like trash on the air. Hey, some people think that's good! But it also means other people don't understand you as easily, and limits the number of people who want to talk to you!

Keep it clean. Keep it stable. Keep it loud. And the whole world will respond.

Mike

Larsen, read them your statement about RF splatter. The Lady at Larsen chuckled about and answered no we don't use teflon for that reason. The Guy at Diamond/Rfparts laughed out loud about it. They both stated that they did use teflon in connectors as an insulators. Maybe we should send our resumes over to them, at least we know that they don't use teflon to eliminate RF splatter. Care to pull another lie out of your butt?

What does this have to do with your magic directional antenna? Stick to the subject. You have given a nice explanation of uses for teflon, none of which pertain to making a directional antenna. Most computer manufacturers do not coat there boards with teflon. If they are coated, they are coated with an acrylic polymer or conformal coating.

I ran a test on your theory Wildcat. I used a HPE4422B and a HP8594E. I
didn't have any Teflon spray, so I used a length of Teflon insulation. The
tests were run at 1.8 Ghz. The Teflon did not make the test antenna
directional. If you think the frequency I used or not actually having teflon
spray influenced the results I will rerun them for you.

Howdy!

I'm still doing some looking as to what CB/SSB I'm wanting, and noticed that Bill's 2Way has two new Cherokee mobile's available. Check out the following URL:

http://www.bills2way.com/equip/CBradio.html#Cherokee

So, what does everyone think? The links to each one provide all the tech specs, and since I'm still new to this, I'm not sure how these guys stack up.

Best Regards,
Jay

He's a troll. I would ignore him because he is ignorant of others.
I am glad I don't have him for a radio neighbor. I would have to
ignore his "break channel" 20 times an hour.

You were absolutely Correct, Jackson! Many thanks. You just saved me alot
of money having to ship this thing out of state. I live out in the
boondocks, and there just aren't any CB shops in North Dakota.
You Da Man!

Regards,

Cary Fries

>whatever) of the loop are facing the signal, the reading will be lower.

If i'm interpreting your term, "widest part facing the signal" as
meaning the plane of the loop being perpendicular to the
signal direction, then your explanation is backwards.

When a both halves of a balanced loop are equidistant to
the signal source then no voltage difference will be induced
in the loop. This would be a null.

When one half of the loop, is closer to the signal than the other
half of the loop, then a voltage will be induced.

If you viewed a loop from above, and the loop was represented
by a vertical line, then the pattern would be the number eight.

```
                         I             8
                     loop    pattern

I have a TramD201 A that was recently serviced comes with D104 mic.
Bidding starts at $350.00 but believe it or not the overhaul cost $275.00 not
to mention what I paid for the radio and Microphone. Local purchaser can test
radio before purchase.

That is a decent price on the Madison, assuming it is new, in box, and
unopened.
```

The Palomar amp will do 300 with a normal radio driving it, and about 400 with a "driver" amp run into it.

The 500 watt figure is more of an input power figure, used to fool people into thinking they are getting a 500 watt linear for a good price.

The best way to figure a linear is to take the retail price of it, and multiply it by 1.

Nobody is giving things away, and a 500 watt amplifier will usually run right about 500 bucks, retail.

A 300 dollar amp will usually peak at about 300, or in that ballpark.

Folks...

The HTX-10 and TRC-485 share a common outside, case
shell, etc. but I believe HTX10 poss. uses a different
internal board.

I looked at some of the documents, parts lists, etc. on Tandy/RS support site and the 485 key parts list seems to be quite a bit different than what I'm seeing in my HTX10 (different parts designators, etc.).

Not sure how different the HTX10 is from the Ranger 10m rig that's being sold by Bill's 2-Way, though.

Of poss. interest: in my HTX10 there are 3 jumpers in the rear of the radio - 2 closed ones next to each other in the driver/final area and one open on near what appears to be the AM modulator/audio area...

The PLL and microcontroller are combined in the HTX10 into one chip on the control board. The PLL programmable divider setting is via software controlled register(s) instead of external serial link or parallel control lines. Moving freqs around would poss require xtals to be changed, etc. or writing new firmware - since these are ROM'd chips you'd need to order a min. run of 5000 chips or so...

Oh well, have to wait till the service manual arrives..

-Bill

Got this email from a buddy of mine:

Hyundai is the "vendor" of the TRS (HTX10) CPU. The software was
written for 28.0~29.699MHz.   The radios are made by Seung
Yong, Inchon Korea.

It will attenuate the signal going into the area where the teflon is, thus
making the signal on the other side higher. Sort of like having a brick wall
behind you can only go one way.

Lowtower, you are either incredibly dumb, or you dont understand physical science. What happens to an antenna when you increase its mass? If you cant figure it out, Im certainly not going to educate you because thats what college is for.

PS: What was this mystery persons name that you supposedly talked to at Larson?

Man you are incredible. You actually believe your own bullshit. And what fluorocarbon did you use to attach your insulation to the antenna Mr. Wizard? What measuring device did you use to determine the RF difference? Hey wait a minute...........1.8 GHZ.....hmm, I think you may want to stop

here and go back and read some of your old postings before you go any
farther with this discussion, because I have a feeling you're about to make
yourself look like a buffoon (not that you don't already).

Okay, I can get my head around this. That still makes it a derivation of the
coaxial dipole and my argument still holds true. The ground radials should offer
no
improvement.

The short answer is yes.

The long answer is that it'll take a little more engineering to do it
than a simple swap. Tell the group exactly what you have and maybe we
can come up with a plan of attack.

Typical response from an anti-CB hambo who, like many, is
angry and bitter because the radio waves don't belong
exclusively to him and others like him.

For CB radio, Messenger made the cleanest units.

If you can find an older one.

The new Texas Stars are also VERY clean after modification...  Inasmuch as
they don't produce as much (but damn near it) power as they used to (pre CW
transmitter days), but they do have the cleanliness area licked!

My old Antron stood on a 70' tower thru Hurricane Opal which was
amazingly still a cat 3 hurricane when it's eye passed over
Montgomery, AL (normally hurricanes have already deterioriated into
nothing but a mass of thunderstorms by the time they reach that far
inland)  I stepped outside and was looking at the antenna in between
rain bands and watched it get laid over parallel to the ground, then
when the wind gust died back a bit it'd stand right back up straight.
Only reason it's not still up there is I upgraded to stacked 3 element
beams.

I use wire. A general purpose G5RV (inverted vee) up about 50 feet and then several cut for exact frequency. Since I work mostly CW and under 100 watts, wire does me just fine. (not that I would refuse an 80 meter yagi if someone dropped one in my yard) I talked with a guy the other day who said he uses a random loop placed up against a window using suction cups, then fed to mini-8, thru the tuner to his TS50. A great fixed station setup if your'e travelling and stopping overnite in a motel or hotel.

Regards,

Arnie -
KT4ST

Sure Frank, whatever you say. Try an elementary physics course at your local Community College then we'll finish this discussion. You see, unlike you, I only comment on things I personally know about. You'll never see me commenting on amps or radio building because there are others on this NG who are far more proficient than I. Inversely, you will always see me commenting on physical science/power distribution (which wire and antennas fall under), mathematics, and legal subjects. This is because I can defend my position with facts, as compared to the BS like you spew forth...........................Have fun!

PS: Hint: put your brain to work an check out the Summer 99 AES Catalog for your Teflon education.

Actually, I wrote the part about getting arrested or shot, yada yada yada.
Wouldn't want someone else to take blame or credit for that I said.
But there is ALWAYS that one chance. NO RADIO is worth losing your life or

freedom.

Is the Texas Star Killer Bee 250 nonsense?
I doubt it.
As far as giving an amp a nickname, is that marketing? Sure.
They are in business to make money.
They also produce a killer product.
Thank you Outcomm!!!

That would be a challenge. I could probably handle the programming end of the task given sufficient time to learn a programming language that allows that much detailed control over an I/O port. Right now the majority of my programming is limited to Visual Basic. I do already have the skeleton of the program written with the beam heading calc fully functional and debugged. Was a good bit simpler than I expected, only had to write a few functions to handle some of the trig. functions that VB can't handle with it's own built in functions. Arcos, Arcsine, Convert Degrees to Radians, and Convert Radians to Degrees. Then write a couple more functions that are fairly high level calculus to combine each of those function calls properly to solve for the heading in degrees. Multi-variable calculus is quite difficult for someone who's been out of school for going on 12 years now but with the help of a couple of well worded queries at Ask Jeeves I was able to find the info I needed.

The truly hard part for me would be the design of the hardware needed to interface with a Ham IV rotator. I'm not much good at designing circuits and such.

Hmmm.... I imagine it would go something like this:
1. Calculate the beam heading desired.
2. Read the voltage of the current of the appropriate lead in the rotator cable as set by the potentiometer in the rotator that would normally drive the degree indicator on the rotator control box, and interpret that voltage to determine the current beam heading..
3. Based upon the current beam heading, decide which direction it would need to go to reach the new heading without trying to turn the rotator past the stop point.
4. Apply voltage to the appropriate pin on the I/O port which would trip the appropriate relay, sending positive voltage up the appropriate lead in the rotator wire to the rotator
5. Monitor the change in the voltage indicating the current beam heading to update a graphical degree indicator on the computer screen and to ensure that the rotator isn't going the wrong direction (error control).
6. Once the rotator has reached the desired degrees remove voltage from the pin in the serial port which tripped the relay which fed power into the rotator to make it turn.

addendum: Before any action initiating a turn of the rotator another pin would have to be fed voltage to trip another relay which would feed power to the solenoid to disengage the wedge brake if the rotator being controlled has such. Likewise, when movement has stopped engage the wedge brake by dropping the voltage from the involved serial port pin.

Hmm... Now that I think about it a little bit, and see the basic steps that would be involved it might not be quite as hard as I orriginally thought. Perhaps I'll investigate this idea a little further and in some future version of my program implement such if no one beats me to it.

Does anyone have a service manual, or copper's tips and tricks for this radio (eagle spitfire handleld). I hate to spend $30 for what should be free (what do all those buttons do when held down at the same time).

Also, does anyone know if cherokee ah100 accessories fit on it?

Carl

Where can a person find a antenna called the "Viper"

Someon had said once, that it only can be found up north.

Anyone give a ph. number for a dealer or a website to visit to check
this antenna out. So I can see what models are available.

Chris

Gordy & gang...

>> Hyundai is the "vendor" of the TRS (HTX10) CPU. The
>> software was written for 28.0~29.699MHz. The radios
>> are made by Seung Yong, Inchon Korea.

I don't know who actually makes the HTX10 - but that CPU/PLL
info is not quite right... but then perhaps other radios in
similar skins may well have different innards (i.e., TRC485
CB vs. HTX10 ham rig. Same outward appearance but seems to be
different internal boards) and may be made by different
vendors. Can't always judge a book by the cover...

Whenever I see an import chip w/an "LC..." prefix, I think
Sanyo. The key IC in the HTX-10 is the LC72322N, and is a
standard Sanyo semiconductor catalog item. (By "standard",
I mean design available to all customers, and non-custom except
for the mask ROM'd firmware; because of the customer-specific
mask ROM, these aren't off-the-shelf parts. You'd need to
order 5000 or even 10K of these parts to justify them firing
up the line to get a new mask run done. And there are no
EPROM-equivalent parts, it'd seem.)

This IC has 3 key items: a 150MHz PLL, a mask-ROM CPU w/RAM,
timers and I/O lines, and an an LCD driver.

See

http://www.semic.sanyo.co.jp/english/catalog/INFO.html and drill down thru their idiotic website - get into the datasheet area where you can enter "LC72322N" (without quote marks) as the part number. It's a 13 page spec sheet in .PDF format of which only 9 pages are accessible due to their screwy website - the .PDF's come a page at a time.

The firmware indeed restricts things to the 28.0-29.7 MHz range. There are no obvious jumpers or lines to cut on the control+PLL board so as to "go play around". The LC72322 PLL programmable divider register is only "viewable" within the firmware's memory/I/O mapping and is not brought out to any external wiring that can be rejiggered.

In fact, if there *were* a line or jumper to cut that would cause a shift in freq. to out-of-band areas or CB ch. 1 to 40, that would've been an *INTENTIONAL* hidden feature - this kinda stuff doesn't happen by accident. CPU/PLL combos like this are chosen so as to *avoid* "tampering".

Only possibility of playing with new xtal osc freqs offers any chance of "alternate configuration" - and I won't know that till I see the schematic & service manual. And even if one were to "move" the radio, the freq. display would be wrong, etc.

-Bill

Not sure what the absolute maximum is, OM, but I live in the northeastern USA where the winters are cold and windy, and my A-99, mounted on a 10-foot mast in a three-foot tripod on the rooftop here, withstood several days worth of 60 miles per hour winds last winter (which I believe works out to about 96.5 kilometers per hour)...and higher gusts. If I did the conversion correctly, the mast would be a little over three meters, the tripod, not quite 91.5 centimeters.

We had a couple of days in a row where the above wind velocities were pretty much sustained over a 48-hour period, with gusts nearing 75 MPH (or about 120.7 KPH).

Mine does not have the radial kit.

Hope this helps.

Among the various radios I use is a Cherokee AH-27F handheld. I have used it with the antenna supplied by the manufacturer, which is a rubber-duck type base-loaded job that measures about 9-3/4" long from the tip to the BNC connector at its base. I have had pretty good results with it (considering it's a handheld), but nevertheless I have been wondering if anyone in the NG has tried any other portable antennas on one of these radios, and if so, how they compared to the one supplied by the manufacturer.

I know that Wireless Marketing offers two other antennas for the AH27F (and its SSB cousin the AH-100)...anybody tried either of those, or perhaps something from another manufacturer?

Please reply here in the NG if you would...private e-mail doesn't reach me unless you're on my mailing list. Sorry, but too many flamers and spammers out there on the net these days.

I feel the biggest problem with the Internet is that it will be over
commercialized and advertising will rule the Internet. Television is
almost unwatchable now because of the amount of advertising. If it
wasn't for remote controls it would be unwatchable. Advertising is
is a propaganda machine that screws with peoples mental behavior.
That my friend is just plain evil and sick.

I agree with John.  I am located in NE PA and had an antron 99 with 2 ground
plane kits withstand similiar wind speeds for many years.  My antenna was
mounted on a 40 foot tower.  It even survive the tornado we had last year with
wind gust around 100 mph.

We will no longer offer the Davemade product line due to reasons of our control. We will still offer the X Force line of products as they have proven to be the most popular line of the two.

Read my original response to your message, Tim. The one where you
claimed to have contacted 112 countries. The quote above is exactly
what I said in that response. So I'm not back peddling, I'm just
repeating what said to a person who obviously has no reading comprehension.

> > However, having said that, I will _NOW_ say that he has not contacted
> >that many countries using any radio in the freeband frequencies. There
> >are only about 260 countries in the entire world, Toll.
>
> once again you know nothing about what you say. i apoligize because the correct

Who is back peddling? In the first message, you said 112 countries
and now you say something else. You're like a little kid. You got
caught telling a lie, and now you're trying to cover it up with more
lies. You haven't contacted 112 DXCC entities either.

This is getting silly. Make your claims, Tim. I'm not going to keep
arguing with you. You keep changing your claims to fit the
circumstances. And I've got better things to do.

Okay, Landshark. You've posted my message again. Now show me where I said that "local cops will have authority over FAA officials."

I said that local officials can charge a drunken pilot with operating a vehicle in an unsafe manner, reckless endangerment, etc. And I said that they would not have to go through FAA officials to charge the pilot with violating those statutes.

But nowhere in that message did I say that local officials have AUTHORITY over FAA officials.

```

I have a Viper built antenna. If you want more info e-mail me.
